English Verb Classes and Alternations - Beth Levin 1993-09

In this rich reference work, Beth Levin classifies over 3,000 English verbs according to shared meaning and behavior. Levin starts with the hypothesis that a verb's meaning influences its syntactic behavior and develops it into a powerful tool for studying the English verb lexicon. She shows how identifying verbs with similar syntactic behavior provides an effective means of distinguishing semantically coherent verb classes, and isolates these classes by examining verb behavior with respect to a wide range of syntactic alternations that reflect verb meaning. The first part of the book sets out alternate ways in which verbs can express their arguments. The second presents classes of verbs that share a kernel of meaning and explores in detail the behavior of each class, drawing on the alternations in the first part. Levin's discussion of each class and alternation includes lists of relevant verbs, illustrative examples, comments on noteworthy properties, and bibliographic references. The result is an original, systematic picture of the organization of the verb inventory. Easy to use, *English Verb Classes and Alternations* sets the stage for further explorations of the interface between lexical semantics and syntax. It will prove indispensable for theoretical and computational linguists, psycholinguists, cognitive scientists, lexicographers, and teachers of English as a second language.

Keratin as a Protein Biopolymer - Swati Sharma 2018-11-23

This book provides information about the sources, structure, and properties of keratin as well as its applications. The extraction from different biomass sources (e.g. feathers, hairs, nails, horn, hoof, and claws) as well as the characterization methods of these extracted materials are explained. The development of bioproducts from keratins is challenging and limited since they are neither soluble in polar solvents nor in non-polar solvents. Therefore, the utilization of different microorganisms for the degradation of keratin is also discussed. The main aim of this book is to highlight the unique features of keratin and to update readers with the possible prospects to develop various value-added products from keratins. The book is highly interesting to researchers working in industry and academia on bioproducts, tissue engineering, biocomposites, biofilm, and biofibers.

Interventions for the Control of Non-Typhoidal Salmonella Spp. in Beef and Pork - World Health Organization 2017-02-15

Non-typhoidal Salmonella spp. (hereafter simply referred to as Salmonella) is estimated to cause 93.8 million cases of acute gastroenteritis and 155,000 deaths globally each year, approximately 85% of which are estimated to be foodborne. As a result, Salmonella has a significant public health and economic impact on society. Pork products are among the top foodborne sources of Salmonella globally. While beef products are a less significant source of salmonellosis in many countries, they have been implicated in several large outbreaks in recent years. Contamination of beef and pork with Salmonella can also have a negative impact on the agri-food and trade sectors due to costly recalls of products and by limiting market access. The 45th Session of the Codex Committee on Food Hygiene (CCFH) agreed to develop "Guidelines for the Control of Non-typhoidal Salmonella spp. in Beef and Pork Meat." To facilitate this work, CCFH (November 2014) requested FAO and WHO provide scientific advice on this matter, by conducting a systematic literature review of the publicly available scientific literature to ensure that any relevant measures for the control of Salmonella in beef and pork are identified, and by convening an expert meeting to review the technical basis of the interventions proposed by CCFH. The experts were specifically asked to: advise on the most appropriate point(s) of application of specific interventions and decontamination treatments; verify, based on the available data, the efficacy of the interventions in terms of reduction of Salmonella; and advise, with some level of confidence, to the extent possible, on the quantifiable level of reduction that interventions achieve, and whether these are appropriate to include in the Codex guideline. The FAO/WHO systematic review covered interventions from primary production, to the end of processing to control Salmonella in pork and beef. FAO and WHO also issued to all Member Countries a public "call for data" on control measures for Salmonella in pork and beef. Several replies were received in response to the call, a couple of which included previously unavailable information.

techniques like hyperspectral imaging and Raman spectroscopy, real-time PCR for pathogens detection, and nanotechnology-based sensors. Then, five chapters describe different advanced technologies for meat decontamination, such as irradiation, hydrostatic and hydrodynamic pressure processing, other non-thermal technologies, and the reduction in contaminants generation. Nutrigenomics in animal nutrition and production is the object of a chapter that is followed by five chapters dealing with nutritional-related issues like bioactive peptides, functional meats, fat and salt reduction, processing of nitrite-free products, and the use of proteomics for the improved processing of dry-cured meats. The last four chapters are reporting the latest developments in bacteriocins against meat-borne pathogens, the functionality of bacterial starters, modified atmosphere packaging and the use of new nanotechnology-based materials for intelligent and edible packaging.

Animal Biotechnology - National Research Council 2002-12-29

Genetic-based animal biotechnology has produced new food and pharmaceutical products and promises many more advances to benefit humankind. These exciting prospects are accompanied by considerable unease, however, about matters such as safety and ethics. This book identifies science-based and policy-related concerns about animal biotechnologyâ€"key issues that must be resolved before the new breakthroughs can reach their potential. The book includes a short history of the field and provides understandable definitions of terms like cloning. Looking at technologies on the near horizon, the authors discuss what we know and what we fear about their effectsâ€"the inadvertent release of dangerous microorganisms, the safety of products derived from biotechnology, the impact of genetically engineered animals on their environment. In addition to these concerns, the book explores animal welfare concerns, and our societal and institutional capacity to manage and regulate the technology and its products. This accessible volume will be important to everyone interested in the implications of the use of animal biotechnology.

Perspectives on Discourse Analysis - Laura Alba Juez 2009-05-27

Perspectives on Discourse Analysis: Theory and Practice provides the student/reader with the basic theoretical knowledge and the empirical tools of some of the most relevant approaches to the analysis of discourse. It has been mainly conceived of as a general (university) course on Discourse Analysis, but it can also be useful for any person or group whose main concern is to acquire the basic necessary knowledge and skills for analyzing any type of discourse. The subject matter of the book could not only be of use for linguists or prospective linguists: given its interdisciplinary character, its findings can be (and in fact are) used and applied by practitioners and scholars from different fields, such as sociology, psychology, medical science, computer science, and so on. Thus the book can be used by any person who, having certain linguistic knowledge, is interested in exploring the fascinating world of discourse. All the chapters contain both a theoretical and an empirical section, the latter containing examples of analysis, as well as exercises (Practice) and self-evaluation questions, whose answers can be found at the end of the book (in the Practice key and Key to self-evaluation questions sections). The book is divided into 12 chapters. The first two introduce basic information about discourse analysis and text linguistics, as well as the necessary techniques for gathering data, including a very brief introduction to corpus linguistics. Chapters 3-11 present and discuss some of the most prominent and well-known approaches to discourse analysis, namely Pragmatics, Interactional Sociolinguistics, Conversation Analysis, The Ethnography of Communication, Variation Analysis and Narrative Analysis, Functional Sentence Perspective, Post-Structuralist Theory and Social Theory, Critical Discourse Analysis and Positive Discourse Analysis, and Mediated Discourse Analysis. Finally, Chapter 12 deals with crucial and further issues, such as the type of discourse chosen for the analysis, the strategies and functions of discourse, or the problem of choosing an appropriate unit of analysis which will suit the aims of research. *Perspectives on Discourse Analysis: Theory and Practice* may prove of value to all those who are professionally involved in the area of discourse and pragmatic studies, or simply to those who wish to acquire the necessary basic knowledge and techniques for analyzing any

type of discourse, from medical, journalistic or political discourse to computer-mediated, humoristic, or hegemonic discourse (where the use and abuse of power is an important issue), just to name a few of the innumerable possibilities. A desirable and intended effect of this book is also the development of an open

and tolerant mind, which will eventually lead to a better understanding of the different and varied manifestations of language, culture and communication in human society.
