Her name was Henrietta Lacks, but scientists know her as HeLa. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb’s effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet

Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta’s family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story, Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta’s daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to

medicine, why couldn't her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

11 Experiments That Failed - Jenny Offill
2011-09-27

"This is a most joyful and clever whimsy, the kind that lightens the heart and puts a shine on the day," raved Kirkus Reviews in a starred review. Is it possible to eat snowballs doused in ketchup—and nothing else—all winter? Can a washing machine wash dishes? By reading the step-by-step instructions, kids can discover the answers to such all-important questions along with the book's curious narrator. Here are 12 "hypotheses," as well as lists of "what you need," "what to do," and "what happened" that are sure to make young readers laugh out loud as they learn how to conduct science experiments (really!). Jenny Offill and Nancy Carpenter—the

ingenious pair that brought you *17 Things I'm Not Allowed to Do Anymore*—have outdone themselves in this brilliant and outrageously funny book.

Superstorm - Kathryn Miles 2014-10-16

The first complete moment-by-moment account of the largest Atlantic storm system ever recorded—a hurricane like no other The sky was lit by a full moon on October 29, 2012, but nobody on the eastern seaboard of the United States could see it. Everything had been consumed by cloud. The storm's immensity

caught the attention of scientists on the International Space Station. Even from there, it seemed almost limitless: 1.8 million square feet of tightly coiled bands so huge they filled the windows of the Station. It was the largest storm anyone had ever seen. Initially a tropical storm, Sandy had grown into a hybrid monster. It charged across open ocean, picking up strength with every step, baffling meteorologists and scientists, officials and emergency managers, even the traditional maritime wisdom of sailors and seamen: What exactly was this thing? By the time anyone decided, it was too late. And then the storm made landfall. Sandy was not just enormous, it was also unprecedented. As a result, the entire nation was left flat-footed. The National Oceanic and Atmospheric Administration couldn't issue reliable warnings; the Coast Guard didn't know what to do. In Superstorm, journalist Kathryn Miles takes readers inside the maelstrom, detailing the stories of dedicated professionals at the National

Hurricane Center and National Weather Service. The characters include a forecaster who risked his job to sound the alarm in New Jersey, the crew of the ill-fated tall ship *Bounty*, Mayor Bloomberg, Governor Christie, and countless coastal residents whose homes—and lives—were torn apart and then left to wonder . . . When is the next superstorm coming?
