Mercedes-Benz, the Modern SL Cars, the R129 - Bernd S. Koehling
2015-09-18

If you started to look in 2015 for a decent R129, you might have wondered, why quite a few of them are already fairly expensive. Like its predecessor, it was built in relatively large numbers for a luxury sports roadster and like its predecessor, good examples will become only more expensive over the next years. The V8 is naturally the most popular version, but why not also consider the more reasonably priced six-cylinder models. After all you don't plan to use this car anymore to get as fast as possible from A to B. Today you use it more like you enjoy a well aged wine, where you savour every sip. With the R129 you cherish every ride. A special case is the V12. To buy one that is less than perfect is a guarantee to ruin you. You have read this far, then this new book, which was already published as e-book, will interest you. It comes with a comprehensive buyer's guide and explains the VIN and data card in great detail, so that one has a better understanding, how these cars were originally equipped and to which market they have been shipped first. Naturally it covers the development and history of the R129, but it also reveals the engines' strong and weak points and has a look at the cars' recent price development. The book ends with a detailed list of the cars' technical specifications and the annual production history of each model.

Tom Swift and His Electric Rifle - Victor Appleton 2018-12-03
Tom is daydreaming of African Safaris while test-firing his new Electric Rifle. It works too well and toasts a hole in his neighbor's dining room wall, prompting an outraged visit from the toastee-in-question. A quick application of cash settles ruffled feathers, and some unspecified safety features are added to the weapon, to prevent a recurrence of the accident. As luck would have it, a famous African Safari Master is in town, shopping for a new big game rifle. He hooks up with Tom and a new custom-built airship, the Black Hawk, is designed & constructed. Tom, Ned, Mr. Damon and the hunter, Mr. Durban, are off to the Dark Continent via steamship, in search of ivory and adventure. Danger encroaches at every turn, and Tom gets to use his new weapon to slay an amazing variety of beasts that swim, crawl, and stampede around him. Needless to say, the rifle is effective on smaller but no less dangerous creatures, too, and does fearful duty when the group is attacked by savage tribesmen. You can probably guess the outcome, but you'll have to read the story to be sure.

The Hack Mechanic Guide to European Automotive Electrical Systems shows you how to think about electricity in your car and then take on real-world electrical problems. The principles discussed can be applied to most conventional internal-combustion-engined vehicles, with a focus on European cars spanning the past six decades. Ceramic Materials and Components for Engines - Jürgen G. Heinrich 2008-11-21

Several ceramic parts have already proven their suitability for serial application in automobile engines in very impressive ways, especially in Japan, the USA and in Germany. However, there is still a lack of economical quality assurance concepts. Recently, a new generation of ceramic components, for the use in energy, transportation and environment systems, has been developed. The efforts are more and more system oriented in this field. The only possibility to manage this complex issue in the future will be interdisciplinary cooperation. Chemists, physicists, material scientists, process engineers, mechanical engineers and engine manufacturers will have to cooperate in a more intensive way than ever before. The R&D activities are still concentrating on gas turbines and reciprocating engines, but also on brakes, bearings, fuel cells, batteries, filters, membranes, sensors and actuators as well as on shaping and cutting tools for low expense machining of ceramic components. This book summarizes the scientific papers of the 7th International Symposium "Ceramic Materials and Components for Engines". Some of the most fascinating new applications of ceramic materials in energy, transportation and environment systems are presented. The proceedings shall lead to new ideas for interdisciplinary activities in the future.
