*Inequality Reexamined* - Amartya Sen

1995-03-15

The noted economist and philosopher Amartya Sen argues that the dictum “all people are

created equal” serves largely to deflect attention from the fact that we differ in age, gender, talents, and physical abilities as well as in material advantages and social background. He

argues for concentrating on higher and more basic values: individual capabilities and freedom to achieve objectives. By concentrating on the equity and efficiency of social arrangements in promoting freedoms and capabilities of individuals, Sen adds an important new angle to arguments about such vital issues as gender inequalities, welfare policies, affirmative action, and public provision of health care and education.

**Models Of Cognitive Development** - Ken Richardson  
2019-07-26

In spite of its obvious importance and popularity, the field of cognitive development remains highly fragmented due to the vast diversity of models of what knowledge and reasoning are, and how they develop. This new Classic Edition

of Models of Cognitive Development aims to overcome this barrier through its careful introduction, illustrated examples, and approach to helping students think more critically about the subject. In this significant work, Richardson provides students, researchers, and comparative theoreticians with a cohesive understanding of the area by organizing diverse schools, frameworks, and approaches according to a much smaller set of underlying assumptions or preconceptions, which themselves can be historically interrelated. By understanding these, it's possible to find pathways around the area more confidently as a whole, to see the "wood" as well as the theoretical trees, and be able to react to individual models more critically and constructively. The Classic Edition of this core text will be essential reading for undergraduate and graduate students of cognitive development. *Child and Adolescent Development for Educators* - Judith Meece 2007

*Child Development* - Elizabeth Bergner Hurlock  
1978

Childhood and Sexuality - Allison Moore  
2017-10-25

This book explores how children engage with sex and sexuality. Building on a conceptual and legal grounding in sexuality studies and the new sociology of childhood, the authors debate the age of consent, teenage pregnancy, sexual diversity, sexualisation, sex education and sexual literacy, paedophilia, and sex in the digital age. Whilst Moore and Reynolds recognise the necessity of child protection and safeguarding in the context of risk, danger and harm, they also argue that where these stifle children's sexual knowledge, understanding, expression and experience, they contribute to a climate of fear, ignorance and bad experiences or harms. What is necessary is to balance safeguarding with enabling, and encourage judicious understandings that advance from a rigid

developmental model to one that recognises pleasure and excitement in children's nascent sexual lives. Exploring that balance through their chosen issues, they seek to encourage changed thinking in professional, personal and academic contexts, and speculate that children might teach adults something about the way they think about sex. Childhood and Sexuality will be of interest to students, scholars and professionals across a range of subjects and disciplines including sociology, social work, criminology, and youth studies.

*Internet Addiction Test (IAT)* - Kimberly Young, Ph.D. 2016-12-01

While the Internet is a relatively new technology, that has impacted the world, and provided many benefits, it has also had negative ramifications. Individuals unable to control their use are jeopardizing school, employment and relationships. The concept of "Internet Addiction" is used to explain uncontrollable, damaging use of technology. It is characterized as an impulse control disorder, comparable to pathological gambling, because of overlapping

diagnostic criteria and symptomatology. Based on these studies, the IAT was constructed to capture the problematic behavior associated with compulsive use of technology, including online porn, internet gambling and compulsive use of online games and social media. The Internet Addiction Test emerged as the first validated measure of Internet and technology addiction. The assessments can be administered in a variety of mental health settings, including private practice clinics, schools, hospitals and residential programs. They can be used when there is suspicion of Internet addiction, as part of a broad intake assessment, or for use in a wellness curriculum to help participants evaluate their own Internet behavior. The IAT can also be a valuable pre-employment screening device, to detect internet addiction among job candidates, to improve productivity and reduce corporate liability. Based on 20 self-report items, the IAT assesses for the presence of addiction to the Internet, electronic

entertainment, social media, and general use of electronic devices, and also measures the severity of addiction, in terms of mild, moderate or severe. Furthermore, because Internet addiction may be driven by different reasons and manifest in different ways, requiring different types of treatment, the IAT produces scores related to the following areas:

Escape  
Compulsion  
Neglecting  
duties  
Anticipation  
Lack of Control  
Social  
Avoidance

*Three Theories of Child Development* - Henry William Maier 1988

This study builds upon the belief that a human being is a manifold between being who acts, feels, and thinks. No one account about human development, whether behavioral,

They helped establish a library there, and on each visit Olds, a writer, and Roche, an artist,

**Parenting** - Susan Golombok 2014-02-25  
*Parenting: What Really Counts?* examines the scientific evidence on what really matters for children's healthy psychological development.

The first section considers whether it is necessary to have two parents, a father present, parents who have a genetic link with their child, or parents who are heterosexual. Section two explores the psychological processes that underlie optimal development for children, particularly the quality of the child's relationship with parents, other family members and the wider social world. Contrary to common assumptions, Susan Golombok concludes that family structure makes little difference to children's day-to-day experiences of life. As well as for students, researchers and teachers, Parenting: What really counts? will be of great interest to parents and those thinking of embarking on a non-traditional route to parenthood. It will also be welcomed by professionals working with families and those involved in the development of family policy.

**Development as Freedom** - Amartya Sen

2011-05-25

By the winner of the 1988 Nobel Prize in

Economics, an essential and paradigm-altering framework for understanding economic development--for both rich and poor--in the twenty-first century. Freedom, Sen argues, is both the end and most efficient means of sustaining economic life and the key to securing the general welfare of the world's entire population. Releasing the idea of individual freedom from association with any particular historical, intellectual, political, or religious tradition, Sen clearly demonstrates its current applicability and possibilities. In the new global economy, where, despite unprecedented increases in overall opulence, the contemporary world denies elementary freedoms to vast numbers--perhaps even the majority of people--he concludes, it is still possible to practically and optimistically restrain a sense of social accountability. Development as Freedom is essential reading.
