Pete & Pickles - Berkeley Breathed 2008-10-16

Pete is a perfectly predictable, practical, uncomplicated pig. At least, he was . . . before a runaway circus elephant named Pickles stampeded into his life, needing a friend. Pickles is larger than life and overflowing with imagination. She takes Pete swan-diving off Niagara Falls. (Sort of.) And sledding down the Matterhorn. (Sort of.) Pete goes along for the wild ride and actually begins to enjoy himself . . . until Pickles goes too far. And Pete tells her she must leave. Yet sometimes the simple life isn’t all it’s cracked up to be. Pulitzer Prize-winning cartoonist Berkeley Breathed offers two new irresistible characters and a heartfelt, hilarious look at the rarity of true friendship.

The Rise and Reign of the Mammals - Steve Brusatte 2022-06-09

‘Steve Brusatte, the author of *The Rise and Fall of the Dinosaurs*, brings mammals out from the shadow of their more showy predecessors in a beautifully written book that . . . makes the case for them as creatures who are just as engaging as dinosaurs.’ - The Sunday Times, ‘Best Books For Summer’ ‘In this terrific new book, Steve Brusatte . . . brings well-known extinct species, the sabre-toothed tigers and the woolly

mammoths, thrillingly back to life’ - The Times The passing of the age of the dinosaurs allowed mammals to become ascendant. But mammals have a much deeper history. They - or, more precisely, we - originated around the same time as the dinosaurs, over 200 million years ago; mammal roots lie even further back, some 325 million years. Over these immense stretches of geological time, mammals developed their trademark features: hair, keen senses of smell and hearing, big brains and sharp intelligence, fast growth and warm-blooded metabolism, a distinctive line-up of teeth (canines, incisors, premolars, molars), mammary glands that mothers use to nourish their babies with milk, qualities that have underlain their success story. Out of this long and rich evolutionary history came the mammals of today, including our own species and our closest cousins. But today’s 6,000 mammal species - the egg-laying monotremes including the platypus, marsupials such as kangaroos and koalas that raise their tiny babies in pouches, and placentals like us, who give birth to well-developed young - are simply the few survivors of a once verdant family tree, which has been pruned both by time and mass extinctions. In *The Rise and Reign of the Mammals*, palaeontologist Steve Brusatte weaves together the history and evolution of our mammal forebears with stories of the scientists whose fieldwork and discoveries underlie our knowledge, both of iconic mammals like the mammoths and sabre-toothed tigers of which we have all heard, and of fascinating species that few of us are aware of. For what we see today is but a very limited range of the mammals that have existed; in this fascinating and groundbreaking book, Steve Brusatte tells their - and our - story.

Dinosaur Tracks from Brazil - Giuseppe Leonardi
2021-08-24

Dinosaur Tracks from Brazil is the first full-length study of dinosaurs in Brazil. Some 500 dinosaur trackways from the Cretaceous period still remain in the Rio do Peixe basins of Brazil, making it one of the largest trackways in the world. Veteran paleontologists Giuseppe Leonardi and Ismar de Souza Carvalho painstakingly document and analyze each track found at 37 individual sites and at approximately 96 stratigraphic levels. Richly illustrated and containing a wealth of data, Leonardi and de Souza Carvalho brilliantly reconstruct the taxonomic groups of the dinosaurs from the area and show how they moved across the alluvial fans, meandering rivers, and shallow lakes of ancient Gondwana. Dinosaur Tracks from Brazil is essential reading for paleontologists.

Locked in Time - Dean R. Lomax 2021-05-18
Fossils allow us to picture the forms of life that inhabited the earth eons ago. But we long to know more: how did these animals actually behave? We are fascinated by the daily lives of our fellow creatures—how they reproduce and raise their young, how they hunt their prey or elude their predators, and more. What would it be like to see prehistoric animals as they lived and breathed? From dinosaurs fighting to their deaths to elephant-sized burrowing ground sloths, this book takes readers on a global journey deep into the earth's past. Locked in Time showcases fifty of the most astonishing fossils ever found, brought together in five fascinating chapters that offer an unprecedented

glimpse at the real-life behaviors of prehistoric animals. Dean R. Lomax examines the extraordinary direct evidence of fossils captured in the midst of everyday action, such as dinosaurs sitting on their eggs like birds, Jurassic flies preserved while mating, a T. rex infected by parasites. Each fossil, he reveals, tells a unique story about prehistoric life. Many recall behaviors typical of animals familiar to us today, evoking the chain of evolution that links all living things to their distant ancestors. Locked in Time allows us to see that fossils are not just inanimate objects: they can record the life stories of creatures as fully alive as any today. Striking and scientifically rigorous illustrations by renowned paleoartist Bob Nicholls bring these breathtaking moments to life.

Gigantosaurus: The Lost Egg - Cyber Group Studios 2020-06-11

Mazu, Tiny, Rocky and Bill are back for another prehistoric adventure. After discovering a lost dinosaur egg, the four friends try to get it back to its herd. The only problem is, they can't find which herd it belongs to! Rocky is losing his patience - he just wants to play, why should he have to care for a silly egg! But, when he sees Gigantosaurus (the toughest dinosaur of them all) be gentle with the lost egg, he realises it's ok to show your softer side after all. Watch the episode and read the story, as these delightful dinosaurs navigate their way through the prehistoric world.

Crowdfunding, strumenti e strategie per la tua campagna di successo - Alessandra Leone 2015-05-15

Come gestire al meglio una campagna di crowdfunding? Quali sono le tappe da percorrere per raggiungere gli obiettivi prefissati? Il volume risponde a questi e ad altri quesiti analizzando i passi da compiere prima, durante e dopo il lancio di un progetto sulle piattaforme online, per arrivare al successo e generare l'effetto farfalla desiderato. L'autrice entra nel vivo della materia offrendo una panoramica completa, in ambito reward, donation, lending e equity-based, anche grazie alle interessanti interviste rilasciate da progettisti e imprenditori che hanno saputo condurre le loro campagne di crowdfunding con ottimi risultati, promuovendo il made in Italy nel nostro paese e nel mondo.

Dinosaurs: New Visions of a Lost World - Michael J. Benton 2021-11-23

The world's leading paleontologist takes us on a visual tour of the latest dinosaur science, illustrated with accurate and stunning paleoart. Dinosaurs are not what you thought they were—or at least, they didn't look like you thought they did. Here, world-leading paleontologist Michael J. Benton brings us a new visual guide to the world of the dinosaurs, showing how rapid advances in technology and amazing new fossil finds have changed the way we see these extinct beasts forever. Stunning, brand-new illustrations by paleoartist Bob Nicholls display the latest and most exciting scientific discoveries in vibrant color. From *Sinosauropteryx*, the first dinosaur to have its color patterns identified—a ginger-and-white striped tail and a “bandit mask”—by Benton's team at the University of Bristol to recent research on the surprising mixed feathers and scales of *Kulindadromeus*, this is one of the first books to include cutting-edge scientific research in paleontology. Each chapter focuses on a particular extinct species, featuring a specially commissioned illustration by Bob Nicholls that brings to life the latest scientific breakthroughs, with accompanying text exploring how paleontologists have determined new details, such as the patterns on skin and the colors of feathers of animals that lived millions of years ago. This visual compendium surprises and challenges everything you thought you knew about what dinosaurs looked like and how they lived.

The Carnosaurs - Steve Parker 1999

Beasts Before Us - Elsa Panciroli 2021-06-10

For most of us, the story of mammal evolution starts after the asteroid impact that killed the

dinosaurs, but over the last 20 years scientists have uncovered new fossils and used new technologies that have upended this story. In *Beasts Before Us*, palaeontologist Elsa Panciroli charts the emergence of the mammal lineage, Synapsida, beginning at their murky split from the reptiles in the Carboniferous period, over three-hundred million years ago. They made the world theirs long before the rise of dinosaurs. Travelling forward into the Permian and then Triassic periods, we learn how our ancient mammal ancestors evolved from large hairy beasts with accelerating metabolisms to exploit miniaturisation, which was key to unlocking the traits that define mammals as we now know them. Elsa criss-crosses the globe to explore the sites where discoveries are being made and meet the people who make them. In Scotland, she traverses the desert dunes of prehistoric Moray, where quarry workers unearthed the footprints of Permian creatures from before the time of dinosaurs. In South Africa, she introduces us to animals, once called 'mammal-like reptiles', that gave scientists the first hints that our furry kin evolved from a lineage of egg-laying burrowers. In China, new, complete fossilised skeletons reveal mammals that were gliders, shovel-pawed Jurassic moles, and flat-tailed swimmers. This book radically reframes the narrative of our mammalian ancestors and provides a counterpoint to the stereotypes of mighty dinosaur overlords and cowering little mammals. It turns out the earliest mammals weren't just precursors, they were pioneers.

Otherlands - Thomas Halliday 2022-02-01

"Immersive . . . bracingly ambitious . . . rewinds the story of life on Earth—from the mammoth

steppe of the last Ice Age to the dawn of multicellular creatures over 500 million years ago."—The Economist "One of those rare books that's both deeply informative and daringly imaginative."—Elizabeth Kolbert, author of *Under a White Sky* The past is past, but it does leave clues, and Thomas Halliday has used cutting-edge science to decipher them more completely than ever before. In *Otherlands*, Halliday makes sixteen fossil sites burst to life on the page. This book is an exploration of the Earth as it used to exist, the changes that have occurred during its history, and the ways that life has found to adapt—or not. It takes us from the savannahs of Pliocene Kenya to watch a python chase a group of australopithecines into an acacia tree; to a cliff overlooking the salt pans of the empty basin of what will be the Mediterranean Sea just as water from the Miocene Atlantic Ocean spills in; into the tropical forests of Eocene Antarctica; and under the shallow pools of Ediacaran Australia, where we glimpse the first microbial life. *Otherlands* also offers us a vast perspective on the current state of the planet. The thought that something as vast as the Great Barrier Reef, for example, with all its vibrant diversity, might one day soon be gone sounds improbable. But the fossil record shows us that this sort of wholesale change is not only possible but has repeatedly happened throughout Earth history. Even as he operates on this broad canvas, Halliday brings us up close to the intricate relationships that defined these lost worlds. In novelistic prose that belies the breadth of his research, he illustrates how ecosystems are formed; how species die out and are replaced; and how species migrate, adapt, and collaborate. It is a breathtaking achievement: a surprisingly emotional narrative about the persistence of life, the fragility of seemingly permanent ecosystems, and the scope of deep time, all of which have something to tell us about our current crisis.

T. Rex: Hunter or Scavenger? (Jurassic

World) - Dr. Thomas R. Holtz, Jr. 2015-05-05

Jurassic World is the long-awaited next installment of the groundbreaking *Jurassic Park* series. *T. rex*'s, velociraptors, triceratops—as well as some all-new dinosaurs—will roar across the screen in this epic action-adventure directed by Colin Trevorrow starring Chris Pratt, Bryce

Dallas Howard, Ty Simpkins and Nick Robinson!
Was Tyrannosaurus rex a speedy and savage
hunter, or was it a slow-moving scavenger,
surviving on scraps left from other dinosaurs?

World-renowned tyrannosaur expert Dr. Thomas
R. Holtz, Jr. shares the evidence on both sides of
the argument in this easy-to-read, easy-to-
understand Step into Reading book that young
dinosaur enthusiasts will heartily devour.
