Environmental Management Accounting: Informational and Institutional Developments - M.D. Bennett
2006-04-11
Environmental Management

Accounting (EMA) is increasingly recognised as a distinguished tool of environmental management. It helps to integrate a company's environmental and business interests, whereby enhancing corporate eco-efficiency in terms of reducing environmental costs or making one's product more competitive. This book gives a comprehensive coverage of the state of the art. It presents a number of EMA frameworks that companies can take as a basis for implementing their own specific EMA structures. Besides discussing environmental accounting issues within conventional management accounting, it gives a detailed picture of materials flow (cost) accounting as an alternative way of looking at the ecology-economy relationships at the corporate level. A fascinating case study shows how a large company (Siemens) applies materials flow accounting and what benefits it entails.

Women Confronting Natural Disaster - Elaine Pitt Enarson 2012-01-01

Natural disasters push ordinary gender disparities to the extreme--leaving women not only to deal with a catastrophe's aftermath, but also at risk for greater levels of domestic violence, displacement, and other threats to their security and well-being. Elaine Enarson presents a comprehensive assessment, encompassing both theory and practice, of how gender shapes disaster vulnerability and resilience. -- Publisher description.

Natural Capitalism - Paul Hawken 2007-10-15

There are no more reespected voices in the environmental movement than these authors, true counselors on the direction of twenty-first-century business. With

hundreds of thousands of books sold worldwide, they have set the agenda for rational, ecologically sound industrial development. In this inspiring book they define a superior & sustainable form of capitalism based on a system that radically raises the productivity of nature's dwindling resources. Natural Capitalism shows how cutting-edge businesses are increasing their earnings, boosting growth, reducing costs, enhancing competitiveness, & restoring the earth by harnessing a new design mentality. The authors offer dozens of examples of businesses that are making fourfold or even tenfold gains in efficiency, from self-heating & self-cooling buildings to 200-miles-per-gallon cars, while ensuring that workers aren't downsized out of their jobs. This practical blueprint shows how making resources more productive will create the next industrial revolution

Environmental Management Accounting – Purpose and Progress - M.D. Bennett

2012-12-06

This is the second book of selected papers on environmental management accounting (EMA) which has been developed for Kluwer by the Environmental Management Accounting Network - Europe (EMAN-Eu), drawn primarily from papers presented at EMAN-Eu, to bring together several examples of leading thinking and practice internationally in this rapidly developing area. The authors include academics, practitioners from industry, and government policy-makers, and the subjects covered range from individual company experiences to the role of government in promoting EMA in industry. The papers included in the book provide several examples of how EMA

can be applied in practice both in large corporations and in small and medium-sized enterprises, and of reports on the extent of the implementation of EMA and the conditions which encourage this. The book is intended for all those interested in EMA as either researchers or practitioners. It will also be of interest both to those interested in how well-established management accounting methods can be adapted and extended in order to meet new demands on companies, and also to environmental managers interested in learning how accounting techniques can be of value in achieving environmental management objectives.

Antibiotic Resistance -
Siouxsie Wiles 2017-04-10

In ten years' time, will antibiotics still work? Have we let bacteria get the upper hand in the evolutionary arms race? In the 1920s the discovery of the antibiotic penicillin started a golden age of medicine. However, experts warn that the

end of that age may be just a decade away. In this BWB Text, microbiologist Siouxsie Wiles explores the looming crisis of antibiotic resistance and its threat to New Zealand. Wiles concludes that New Zealand must do more to protect the public from a future without antibiotics.

The Numinous Legacy - Adair Butchins 2002

Where is God in the universe if anywhere? Why did God make germs? Why should we be so special? Could the universe have been different? This is a book that brings home, in no uncertain fashion, the discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth

century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of the structure of the universe in terms of our own consciousness; it behoves the reader to consider tha

The Danube River Basin -

Igor Liska 2015

This volume offers a comprehensive review of the chemical, biological and hydromorphological quality of the Danube. The first part examines the chemical pollution of surface waters, focusing on organic compounds (with special emphasis given to EU WFD priority substances and Danube River Basin

specific pollutants), heavy metals and nutrients. Attention is also given to pollution of groundwater and drinking water resources by hazardous substances and to radioactivity in the Danube. The second part highlights the biology and hydromorphology of the Danube. It focuses on benthic macroinvertebrates, phytobenthos, macrophytes, fish, phytoplankton as well as microbiology, with chapters dedicated to gaps and uncertainties in the ecological status assessment and to invasive alien species. Further chapters dealing with the hydromorphology, sediment management and isotope hydrology complete the overall picture of the status of the Danube.

Infernal Traffic - Andrew F. Pearson 2011

Britain's abolition of the slave trade in 1807 did not end the traffic of human beings across the Atlantic. Indeed, for many decades to come, hundreds of thousands of Africans continued to be shipped into slavery. South Atlantic island of

St. Helena played a pivotal role in Britain's effort to suppress the slave trade. During this period it received over 25,000 'liberated Africans' taken from slave ships by Royal Navy patrols. Conditions aboard the slavers were appalling and many did not survive their ordeal. Rupert's Valley therefore became a graveyard to many thousands of Africans. In 2008 archaeological excavations in advance of a proposed airport uncovered a small part of that graveyard, revealing the burials of over 300 victims of the slave trade. This book presents the findings of this unique archaeological and osteological study, and brings the inhumanity of the slave trade into vivid focus. It tells the story of a group of people who had lived in Africa only a few weeks prior to their death on St. Helena, and whose remains bear witness to the cruelty of their transportation.

International Encyclopedia of Men and Masculinities -

Michael Flood 2007-08-07

The International Encyclopedia of Men and Masculinities offers a comprehensive guide to the current state of scholarship about men, masculinities, and gender around the world. The Encyclopedia's coverage is comprehensive across three dimensions: areas of personal and social life, academic disciplines, and cultural and historical contexts and formations. The Encyclopedia: examines every area of men's personal and social lives as shaped by gender covers masculinity politics, the men's groups and movements that have tried to change men's roles presents entries on working with particular groups of boys or men, from male patients to men in prison incorporates cross-disciplinary perspectives on and examinations of men, gender and gender relations gives comprehensive coverage of diverse cultural and historical formations of masculinity and the bodies of scholarship that

have documented them. The Encyclopedia of Men and Masculinities is composed of over 350 free-standing entries written from their individual perspectives by eminent scholars in their fields. Entries are organized alphabetically for general ease of access but also listed thematically at the front of the encyclopedia, for the convenience of readers with specific areas of interest.

Decolonising Conflicts, Security, Peace, Gender, Environment and Development in the Anthropocene - Ursula Oswald 2021

In this book 25 authors from the Global South (19) and the Global North (6) address conflicts, security, peace, gender, environment and development. Four parts cover I) peace research epistemology; II) conflicts, families and vulnerable people; III) peacekeeping, peacebuilding and transitional justice; and IV) peace and education. Part I deals with peace ecology, transformative peace, peaceful societies,

Gandhis non-violent policy and disobedient peace. Part II discusses urban climate change, climate rituals, conflicts in Kenya, the sexual abuse of girls, farmer-herder conflicts in Nigeria, wartime sexual violence facing refugees, the traditional conflict and peacemaking process of Kurdish tribes, Hindustani family shame, and communication with Roma. Part III analyses norms of peacekeeping, violent non-state actors in Brazil, the art of peace in Mexico, grass-roots post-conflict peacebuilding in Sulawesi, hydrodiplomacy in the Indus River Basin, the Rohingya refugee crisis, and transitional justice. Part IV assesses SDGs and peace in India, peace education in Nepal, and infrastructure-based development and peace in West Papua. Peer-reviewed texts prepared for the 27th Conference of the International Peace Research Association (IPRA) in 2018 in Ahmedabad in India. Contributions from two pioneers of global peace

research: a foreword by Johan Galtung from Norway and a preface by Betty Reardon from the United States. Innovative case studies by peace researchers on decolonising conflicts, security, peace, gender, environment and development in the Anthropocene, the new epoch of earth and human history. New theoretical perspectives by senior and junior scholars from Europe and Latin America on peace ecology, transformative peace, peaceful societies, and Gandhis non-violence policy. Case studies on climate change, SDGs and peace in India; conflicts in Kenya, Nigeria, South Sudan, Turkey, Brazil and Mexico; Roma in Hungary; the refugee crisis in Bangladesh; peace action in Indonesia and India/Pakistan; and peace education in Nepal.

Boi - Anne Marie Borsboom
2014

"[A] photographic journey through life and around the world to find peace and salvation, which is being true to oneself. It is a unique

document and an impressive story about a ten-year-period in the life of Nitzan Krinsky and his transition from girl to boy. The story is told through endless diaristic self-portraits."--Page [4] of cover.
River Tourism - Bruce Prideaux
2009-01-01

This book explores river tourism from a range of perspectives including river uses, heritage, management, environmental concerns, and marketing. The book has 15 chapters and an index. The intended readership includes researchers and students of leisure and tourism.

The Masculinities Reader -
Stephen M. Whitehead
2002-01-21

The Masculinities Reader provides a clear and comprehensive introduction to the key debates informing the study of masculinity. Structured in an accessible format, the book makes available in a single text some of the most important work on a range of subjects including male power; patriarchy; management and

organizations; sexualities; gay friendships; sport; intimacy; identity; hegemonic masculinity; violence; schooling; language; homophobia; Black, Latino and Chicano masculinities; families; media; postmodernism; and subjectivity. The book opens with a substantive introductory chapter that looks at masculinity in crisis, post-feminism, men's power, changing men, nature/nurture debates and concepts of identity. Recognizing the global dimensions of gender change, the book draws on research from many corners of the world. The Masculinities Reader is an essential text for students and researchers concerned with exploring men and masculinities. In providing a unique overview of an increasingly important field of sociological enquiry, this book will be an invaluable addition to students and academics in sociology, gender studies, cultural studies, and a range of other disciplines. Contributors include: Arthur Brittan, David Collinson, Bob Connell, Ralph

Donald, David Gutterman, Jeff Hearn, Deborah Kerfoot, Scott Kiesling, Michael Kimmel, John MacInnes Richard Majors, Michael Messner, Alfredo Mirande, David Morgan, Peter Nardi and Lynne Segal.

Conscious Mini-Jottings -

Madhu Sharma 2020-12-15

Conscious Mini-Jottings is a book that will sit on your bedside table for years like a luminous, eternal flower. A book you will reach for again and again, whenever you need to reconnect with yourself. A book to hold against your heart like a consecrated talisman. A book from whose pages wafts a fragrance of boundless love, exuberance and sacred wisdom each time it is opened. 'Madhu Sharma shows promise as a poet as she is well able to portray deep inner emotions. The poems speak of an intense spiritual quest.' - Dr. Karan Singh, Crown Prince of the erstwhile Princely State of Jammu & Kashmir, eminent statesman, philanthropist and poet. These Poems are brimming with love. After reading a few, the words start

disappearing. A feel and a trance remains. I could constantly hear the notes of a flute from a distance. The Poet has a transparent soul and the mind of Sufi. She writes... Life, You are the bridge between I and me. You are the one that slides The I into me, and Glides the me into I. - Gulzar, renowned poet, lyricist, author, screen-writer and film director. Recipient of Padma Bhushan, Oscar, Grammy and many other awards. 'Just like there is room for music beyond technical brilliance and firework mastery, there is a world of expression beyond literature. Appeal, aesthetics, poise are all musical terms for me - so evident in the poetry of Madhu Sharmaji. A true bouquet of words.' - Ustad Amjad Ali Khan, Padma Vibhushan and internationally acclaimed sarod virtuoso.

Men, Masculinities, and

Earth - Paul M. Pulé

2021-08-03

This book considers issues of social and ecological significance through a masculinities lens. Earth - our

home for aeons - is reeling. The atmosphere is heating up, causing reefs to bleach, fisheries to collapse, regions to flood and dry, vast tracts to burn, the polar ice caps to melt, ancient glaciers to retreat, biodiversity to decline exacerbated by the sixth great extinction, and more.

Meanwhile, social and economic disparities are widening. Pandemics are cauterising glocal communities and altering our social mores. Nationalism is feeding divisiveness and hate, especially through men's violence. Politically extreme individuals and groups are exalting freedom while scapegoating the marginalised. Such are the symptoms of an emerging (m)Anthropocene. This anthology contends with these alarming trends, pointing our attention towards their gendered origins. Building on our monograph *Ecological Masculinities: Theoretical Foundations and Practical Guidance* (2018), this collection of essays is framed as a dinner party conversation

grouped into six discursive themes. Their views reflect a growing community of practice, whose combined efforts capture the most recent perspectives on masculine ecologisation. Together, they aim to help create a more caring world for all, moving the ecological masculinities conversation forward as it becomes an established, international, and pluralised field of study.

What about the Rogue? - Ana Raquel Lourenço Fernandes
2011

This book has been shortlisted for an ESSE book award 2012 in Literatures in the English Language, Junior Scholars. This book gives an account of the significance of the rogue in contemporary British literature and culture, focusing on this character's survival and metamorphosis from the second half of the 20th century onwards. While the character of the

rogue is most often associated with the 16th and 17th centuries, the author focuses on contemporary literary texts, as well as cinematographic adaptations. She discusses the revival of the rogue mainly in the 1950s, adopting a comparative approach, establishing connections to other fields of representation besides literature. Thus, the originality of this book lies in its interdisciplinary nature. The focus on contemporary writers who have put the character of the rogue at the forefront in their works, particularly Martin Amis and Irvine Welsh, and the author's awareness of the socio-political circumstances in which the books were written, adds substantially to our understanding of the rogue character.

Men, Masculinities and Disaster - Elaine Enarson

2016-06-17

In the examination of gender as a driving force in disasters, too little attention has been paid to how women's or men's disaster experiences relate to the wider context of gender inequality, or how gender-just practice can help prevent disasters or address climate change at a structural level. With a foreword from Kenneth Hewitt, an afterword from Raewyn Connell and contributions from renowned international experts, this book helps address the gap. It explores disasters in diverse environmental, hazard, political and cultural contexts through original research and theoretical reflection, building on the under-utilized orientation of critical men's studies. This body of thought, not previously applied in disaster contexts, explores how men gain, maintain and use power to assert control over women. Contributing authors examine the gender terrain of disasters 'through men's eyes,' considering how diverse forms of masculinities shape men's

efforts to respond to and recover from disasters and other climate challenges. The book highlights both the high costs paid by many men in disasters and the consequences of dominant masculinity practices for women and marginalized men. It concludes by examining how disaster risk can be reduced through men's diverse efforts to challenge hierarchies around gender, sexuality, disability, age and culture.

The World in 2050 - Laurence C. Smith 2010-09-23

A vivid forecast of our planet in the year 2050 by a rising star in geoscience, distilling cutting-edge research into four global forces: demographic trends, natural resource demand, climate change, and globalization. The world's population is exploding, wild species are vanishing, our environment is degrading, and the costs of resources from oil to water are going nowhere but up. So what kind of world are we leaving for our children and grandchildren? Geoscientist and Guggenheim fellow

Laurence Smith draws on the latest global modeling research to construct a sweeping thought experiment on what our world will be like in 2050. The result is both good news and bad: Eight nations of the Arctic Rim (including the United States) will become increasingly prosperous, powerful, and politically stable, while those closer to the equator will face water shortages, aging populations, and crowded megacities sapped by the rising costs of energy and coastal flooding. *The World in 2050* combines the lessons of geography and history with state-of-the-art model projections and analytical data-everything from climate dynamics and resource stocks to age distributions and economic growth projections. But Smith offers more than a compendium of statistics and studies- he spent fifteen months traveling the Arctic Rim, collecting stories and insights that resonate throughout the book. It is an approach much like Jared Diamond took in *Guns, Germs,*

and *Steel and Collapse*, a work of geoscientific investigation rich in the appreciation of human diversity. Packed with stunning photographs, original maps, and informative tables, this is the most authoritative, balanced, and compelling account available of the world of challenges and opportunities that we will leave for our children.

Human - Wildlife Conflicts in Europe - Reinhard A.

Klenke 2013-04-12

This book is about conflicts between different stakeholder groups triggered by protected species that compete with humans for natural resources. It presents key ecological features of typical conflict species and mitigation strategies including technical mitigation and the design of participatory decision strategies involving relevant stakeholders. The book provides a European perspective, but also develops a global framework for the development of action plans.

Novacene - James Lovelock
2020-11-10

A fascinating new study from the originator of the Gaia Theory, “who conceived the first wholly new way of looking at life on earth since Charles Darwin” (Independent) One of the world’s leading scientific thinkers offers a vision of a future epoch in which humans and artificial intelligence unite to save the Earth James Lovelock, creator of the Gaia hypothesis and the greatest environmental thinker of our time, has produced an astounding new theory about future of life on Earth. He argues that the Anthropocene—the age in which humans acquired planetary-scale technologies—is, after 300 years, coming to an end. A new age—the Novacene—has already begun. In the Novacene, new beings will emerge from existing artificial intelligence systems. They will think 10,000 times faster than we do and they will regard us as we now regard plants. But this will not be the cruel, violent machine takeover of the planet imagined by science

fiction. These hyperintelligent beings will be as dependent on the health of the planet as we are. They will need the planetary cooling system of Gaia to defend them from the increasing heat of the sun as much as we do. And Gaia depends on organic life. We will be partners in this project. It is crucial, Lovelock argues, that the intelligence of Earth survives and prospers. He does not think there are intelligent aliens, so we are the only beings capable of understanding the cosmos. Perhaps, he speculates, the Novacene could even be the beginning of a process that will finally lead to intelligence suffusing the entire cosmos. At the age of 100, James Lovelock has produced the most important and compelling work of his life.

Paul Kossoff: All Right Now

- J. P. James 2017-11-02

Affectionately known as 'Koss', Paul Kossoff's playing touched people. It still does today, more than forty years after his sad and untimely death at the age of twenty-five. This authorised

biography pays fitting tribute to a much-loved and widely admired musician whose influence and inspiration is still very evident. It's all here: Kossoff's musical childhood, his formative years with Black Cat Bones, forming Free at seventeen, that group's dizzying success, breakup, reforming and dissolution, the solo years, Back Street Crawler - the sessions, the tours and big concerts, the triumphs, the tragedies and the heartbreak - J.P. James takes the reader right there. Over four distinct sections, Kossoff's many guitars and the equipment he used to make them sing are fully documented; a brand-new detailed analysis of Kossoff's distinctive playing style and technique is presented for the first time; a broad overview of Kossoff's creative life draws on the voices of family, friends and fellow musicians; and finally, Kossoff's musical influences, approach to playing and his wider musical interests, hopes and dreams are explored - all drawn from his own words. Cramming so

much into his short years, Paul Kossoff left a rich musical legacy, and he is indeed All Right Now. Thoroughly researched and sensitively written, given often in Kossoff's own words and packed with anecdotes from those who were there, musicians and fans alike will enjoy this authoritative and comprehensive biography. Medicare Meets

Mephistopheles - David A. Hyman 2009-09-25

Let's say you're the devil, and you want to corrupt the American republic. How would you go about it? According to David Hyman, you might create something like Medicare, the federal health care program for the elderly. Hyman submits that Medicare may be the greatest trick the devil ever played. Medicare feeds on the avarice of doctors and other providers, turns seniors into health care gluttons, and makes regions of the United States green with envy over the dollars showered on other

regions. The program exploits the sloth of government officials to increase the tax burden on workers and drag down the quality of care for seniors. Medicare makes Democrats lust for socialized medicine, while its imperviousness to reform makes Republicans angrier and angrier. Most of all, Medicare allows its ideological supporters to bleat and preen their way to the heights of moral vanity. In the style of C.S. Lewis' *The Screwtape Letters*, Hyman writes that Medicare has "freed the self-interest of these mortals from its natural restraints. As a result, the seven deadly sins have blossomed." With epic political battles over Medicare and the future of limited government looming just over the horizon, Hyman uses satire to cast a critical eye on this mediocre government program. *Below the Parapet* - Carol Thatcher 1997

On the eve of his retirement from a successful business career, Denis Thatcher became Britain's first male prime

ministerial consort, mixing daily with some of the most powerful people in the world. Below the Parapet, is a riveting account of more than a decade of political triumph and turmoil, told from the perspective of his daughter Carol Thatcher.

Fundamentals of Industrial Electronics - Bogdan M.

Wilamowski 2011-03-04

The Industrial Electronics Handbook, Second Edition combines traditional and newer, more specialized knowledge that will help industrial electronics engineers develop practical solutions for the design and implementation of high-power applications. Embracing the broad technological scope of the field, this collection explores fundamental areas, including analog and digital circuits, electronics, electromagnetic machines, signal processing, and industrial control and communications systems. It also facilitates the use of intelligent systems—such as neural networks, fuzzy systems, and evolutionary

methods—in terms of a hierarchical structure that makes factory control and supervision more efficient by addressing the needs of all production components. Enhancing its value, this fully updated collection presents research and global trends as published in the IEEE Transactions on Industrial Electronics Journal, one of the largest and most respected publications in the field. Fundamentals of Industrial Electronics covers the essential areas that form the basis for the field. This volume presents the basic knowledge that can be applied to the other sections of the handbook. Topics covered include: Circuits and signals Devices Digital circuits Digital and analog signal processing Electromagnetics Other volumes in the set: Power Electronics and Motor Drives Control and Mechatronics Industrial Communication Systems Intelligent Systems

Knowledge Graphs - Aidan Hogan 2021-11-08
This book provides a

comprehensive and accessible introduction to knowledge graphs, which have recently garnered notable attention from both industry and academia. Knowledge graphs are founded on the principle of applying a graph-based abstraction to data, and are now broadly deployed in scenarios that require integrating and extracting value from multiple, diverse sources of data at large scale. The book defines knowledge graphs and provides a high-level overview of how they are used. It presents and contrasts popular graph models that are commonly used to represent data as graphs, and the languages by which they can be queried before describing how the resulting data graph can be enhanced with notions of schema, identity, and context. The book discusses how ontologies and rules can be used to encode knowledge as well as how inductive techniques—based on statistics, graph analytics, machine learning, etc.—can be used to encode and extract

knowledge. It covers techniques for the creation, enrichment, assessment, and refinement of knowledge graphs and surveys recent open and enterprise knowledge graphs and the industries or applications within which they have been most widely adopted. The book closes by discussing the current limitations and future directions along which knowledge graphs are likely to evolve. This book is aimed at students, researchers, and practitioners who wish to learn more about knowledge graphs and how they facilitate extracting value from diverse data at large scale. To make the book accessible for newcomers, running examples and graphical notation are used throughout. Formal definitions and extensive references are also provided for those who opt to delve more deeply into specific topics.

Government and Public Health in America - Ronald Hamowy

2008-01-01

How involved should the

government be in American healthcare? Ronald Hamowy argues that to answer this pressing question, we must understand the genesis of the five main federal agencies charged with responsibility for our health: the Public Health Service, the Food and Drug Administration, the Veterans Administration, the National Institutes of Health, and Medicare. In examining these, he traces the growth of federal influence from its tentative beginnings in 1798 through the ambitious infrastructures of today and offers startling insights on the current debate. The author contends that until the twentieth century, governmental involvement in health care policy was nominal. With the sweeping food and drug reforms of 1906 and the Medicare amendments to Social Security in 1965, a whole new system of health care was brought to the American public. A careful analysis of the various programs generated by this legislation, however, shows a different picture of pet

projects, budgetary lobbying, competitive bureaucracy and discord between the agencies and their opposition.

Government and Public Health in America provides an illuminating look at the complicated forces that created these institutions and provokes discussion about their usefulness in the future.

Hamowy's thoroughly researched analysis fills a substantial gap in the history of health policy. Economists, political scientists, historians, sociologists and health professionals concerned with the interface between government and health care will find much to recommend in this highly readable account of a fascinating topic.

Fish and Game Code - California 1915

Crisis of Abundance - Arnold S. Kling 2006

In *Crisis of Abundance: Rethinking How We Pay for Health Care*, economist Arnold King warns that no health care system is perfect. Under the status quo, Americans are not

getting maximum value per dollar spent. A government solution is likely to require rationing to a degree unacceptable to many Americans. However, a market-oriented approach would require consumers to take greater personal responsibility for health care decisions and expenses. Kling outlines an approach for increased consumer responsibility, with fewer expenses paid by third parties.

The Original Green - Stephen A. Mouzon 2010-01-01

Wild Dog Dreaming - Deborah Bird Rose 2011-03-04

We are living in the midst of the Earth's sixth great extinction event, the first one caused by a single species: our own. In *Wild Dog Dreaming*, Deborah Bird Rose explores what constitutes an ethical relationship with nonhuman others in this era of loss. She asks, Who are we, as a species? How do we fit into the Earth's systems? Amidst so much change, how do we find our way into new stories to guide

us? Rose explores these questions in the form of a dialogue between science and the humanities. Drawing on her conversations with Aboriginal people, for whom questions of extinction are up-close and very personal, Rose develops a mode of exposition that is dialogical, philosophical, and open-ended. An inspiration for Rose--and a touchstone throughout her book--is the endangered dingo of Australia. The dingo is not the first animal to face extinction, but its story is particularly disturbing because the threat to its future is being actively engineered by humans. The brazenness with which the dingo is being wiped out sheds valuable, and chilling, light on the likely fate of countless other animal and plant species. "People save what they love," observed Michael Soul, the great conservation biologist. We must ask whether we, as humans, are capable of loving--and therefore capable of caring for--the animals and plants that are disappearing in a cascade of extinctions. Wild Dog

Dreaming engages this question, and the result is a bold account of the entangled ethics of love, contingency, and desire.

Communicating the Environment to Save the Planet
- Maurizio Abbati 2019-01-30

This book, based on authoritative sources and reports, links environmental communication to different fields of competence: environment, sustainability, journalism, mass media, architecture, design, art, green and circular economy, public administration, big event management and legal language. The manual offers a new, scientifically based perspective, and adopts a theoretical-practical approach, providing readers with qualified best practices, case studies and 22 exclusive interviews with professionals. A fluent style of writing leads the readers through specific details, enriching their knowledge without being boring. As such it is an excellent preparatory and interdisciplinary academic tool

intended for university students, scholars, professionals, and anyone who would like to know more on the matter.
