Built to Sell - John Warrillow 2011-04-28

According to John Warrillow, the number one mistake entrepreneurs make is to build a business that relies too heavily on them. Thus, when the time comes to sell, buyers aren't confident that the company—even if it's profitable—can stand on its own. To illustrate this, Warrillow introduces us to a fictional small business owner named Alex who is struggling to sell his advertising agency. Alex turns to Ted, an entrepreneur and old family friend, who encourages Alex to pursue three criteria to make

his business sellable: * Teachable: focus on products and services that you can teach employees to deliver. * Valuable: avoid price wars by specialising in doing one thing better than anyone else. * Repeatable: generate recurring revenue by engineering products that customers have to repurchase often.

Labour Relations in the Global Fast-Food Industry - Tony Royle 2004-08-02

The fast-food industry is one of the few industries that can be described as truly global, not least in terms of employment, which is estimated at around ten million people worldwide. This edited volume is the first of its kind, providing an analysis of labour relations in this significant industry focusing on multinational corporations and large national companies in ten countries: the USA, Canada, the UK, the Netherlands, Germany, Australia, New Zealand, Singapore, and Russia. The extent to which multinational enterprises impose or adapt their employment practices in differing

national industrial relations systems is analysed, Results reveal that the global fast-food industry is typified by trade union exclusion, high labour turnover, unskilled work, paternalistic management regimes and work organization that allows little scope for developing workers' participation in decision-making, let alone advocating widely accepted concepts of social justice and workers' rights.

The Code Economy - Philip E. Auerswald 2017 The "code economy" refers to the evolving technologically-driven environment we live in. In services or manufacturing, outputs emerge more and more from coded computerized systems and less as assembled mechanical devices and procedures. Industries seek algorithms to make software not only more reliable for firms' development of products and services, but also

to market them and ease their purchase and use by consumers. This process automates jobs. It gives increasing economic advantage to entrepreneurs who can harness "code" to serve on the large scale the growing niches into which consumers are organized. Yet, mastering the "code" also gives individuals and informal social networks the resources to bundle products and services and put them up for sale and convenient use at more local levels. The economics of the rest of the 21st century will see the movement away from traditional firms and more toward people's relying on themselves as the sources of their livelihoods. The code economy has clearly not developed in a vacuum. Invention, innovation, and the pursuit of happiness have characterized human activities for centuries. What is changing is how societies and individuals radically value endeavors in life differently from even a decade ago, most notably away from industries organized as "command and control" systems. In *The Code Economy*, Philip Auerswald investigates how economists themselves have been hard pressed to gauge new economic indices of satisfaction that go beyond traditional measures. He explores how the code or "shared" economy reaches into domains such as health, where greater longevity, the popularization of medical knowledge, and the emphases on preventive care and wellness will complement the delivery of medical services. Further, living in the code economy will prompt people to orient their children's futures to more self-reliant pursuits and seek investments that truly serve them and not the institutions that have traditionally dominated the financial and economic worlds. Identity at Work - Eric Olmedo 2015-07-16

This book investigates the interface of ethnicity with occupation, empirically observed in luxury international hotels in Kuala Lumpur, Malaysia. It employs the two main disciplines of anthropology and sociology in order to understand the root causes and meaning of ethnicity at work within the hospitality industry sector. More specifically, it observes social change in a multi-ethnic and non-secular society through an ethnographic study located in a micro organisation: the Grand Hotel. At the individual level, this research shows how identity shifts and transformation can be mediated through the consumption and manipulation of food at the workplace. In addition, it combines an ambitious theoretical discussion on the concept of ethnicity together with empirical data that highlights how ethnicity is lived on an everyday basis at a workplace manifesting the dynamics of cultural, religious and ethnic diversity. The book presents the quantitative and qualitative findings of two complementary surveys and pursues an interdisciplinary approach, as it integrates methodologies from the sociology of organisations with classic fieldwork methods

borrowed from ethnology, while combining French and Anglo-Saxon schools of thoughts on questions of identity and ethnicity. The results of the cultural contact occurring in a westernised pocket of the global labour market - in which social practices derive from the headquarters located in a society where ethnicity is self-ascribed - with Malaysian social actors to whom ethnicity is assigned will be of particular interest for social scientists and general readers alike.

Economy Hotels in China - Songshan Sam Huang
2014-01-10

While economy or budget hotels have been popular in western countries since the end of the Second World War, they have only emerged as a sector in their own right in China since the mid-1990s. Indeed, as a new service industry sector, economy hotels in China demonstrate important characteristics which can be used to illustrate and help explain China's current economic progress more generally. This book provides a comprehensive overview of the economy hotel sector in China. It covers macro-level social-cultural, economic, environmental, geographic and development issues, alongside micro-level consideration of the budget hotel companies' innovative management and marketing procedures, business expansion strategies, general hotel management and operation issues, as well as an analysis of some leading entrepreneurs in the sector, and in-depth case studies examining the most successful economy hotel companies in China. Huang and Sun argue that the rapid development of budget hotels in China demonstrates how, under the influence of globalisation, Chinese businesses have become more innovative as they apply successful western business models to China. In turn, they show that the China model is fundamentally different in terms of its driving force, which lies purely in its domestic travel market, fuelled by China's continued economic growth. There is therefore much to explore about both China's market situation and business practices in the economy hotel sector and this book makes an important contribution to our understanding of China's new business environment. Based on extensive fieldwork and investigation, Economy Hotels in China will be welcomed by students and scholars of tourism, hospitality, business

studies and Chinese studies, but it will also appeal to practitioners of business management in these sectors who are interested in China's development and business opportunities in China.
