The Science and Archaeology of Materials - Julian Henderson 2013-04-15

The Science and Archaeology of Materials is set to become the definitive work in the archaeology of materials. Henderson's highly illustrated work is an accessible and fascinating textbook which will be essential reading for all practical archaeologists. With clear sections on a wide range of materials including ceramics, glass, metals and stone, this work examines the very foundations of archaeological study. Anyone interested in ancient technologies, especially those involving high temperatures, kilns and furnaces will be able to follow in each chapter how raw materials are refined, transformed and shaped into objects. This description is then followed by appropriate case studies which provide a new chronological and geographical example of how scientific and archaeological aspects can and do interact. They include: *Roman pale green and highly decorated glass *17th Century glass in Britain and Europe *the effect of the introduction of the wheel on pottery technology *the technology of Celadon ceramics *early copper metallurgy in the Middle East *chemical analysis and lead isotope analysis of British Bronzes *early copper alloy metallurgy in Thailand *the chemical analysis of obsidian and its distribution *the origins of the Stonehenge bluestones This book shows how archaeology and science intersect and feed off each other. Modern scientific techniques have provided data which, when set within a fully integrated archaeological context, have the potential of contributing to mainstream archaeology. This holistic approach generates a range of connections which benefits both areas and will enrich archaeological study in the future.

Fluoride Glass Optical Fibres - P.W. France 2012-12-06

One of the most exciting prospects for optical fibres made from fluoride glasses is the possibility of providing long distance optical communication systems without the need for repeaters. This objective has stimulated much of the work into fluoride glasses over the past ten years, and has prompted the writing of this book. It has also emerged that fluoride fibres can transmit both visible and infrared energy (from about 0.5 to 5 μm) and that they have many applications outside the field of telecommunications. These include optical fibre sensors (particularly in remote infrared spectroscopy), laser surgery and fibre lasers. Several companies are now established in the field, and good quality fluoride fibres are available from sources throughout the USA, Europe and Japan. Moreover, the first commercial instruments based on fluoride fibres are finding their way to the market place and these fibres will undoubtedly form the basis of many more instruments yet to be developed. The work presented in this book represents the field both from an academic understanding of the materials and ways to convert them into fibre, and from a practical and commercial viewpoint. The principal author and some of the co authors are based at the British Telecom Research Laboratories in the UK.

[Peoples and Crafts in Period IVB at Hasanlu, Iran](#) - Maude de Schauensee 2012-12-17

The University of Pennsylvania Museum of Archaeology and Anthropology has had a long-standing interest in the archaeology of Iran. In 1956, Robert H. Dyson, Jr., began excavations south of Lake Urmia at the large mounded site of Hasanlu. Although the results of these excavations await final publication, the Hasanlu Special Studies series—of which this monograph is the fourth volume—describes and analyzes specific aspects of technology, style, and iconography. This volume describes a group of ongoing research projects, most of which provide new information on Iron Age technology. A theme that runs through these studies is the degree to which ancient workers varied the composition of their products to create desirable colors and textures. The book begins with a description of the wooden furniture fragments along with fittings and decorative elements for furniture. It presents the first detailed description of the charred textiles, and places these textiles in their archaeological contexts, suggesting the roles that textiles may have played in daily life. Later chapters assess the significance of Hasanlu in the history of glassmaking, describe the archaeometallurgy of the Hasanlu IVB bronzes, and present a catalog of the bladed weapons. Also, the book presents the evidence for deliberate violence against individuals as indicated by their skeletal injuries and the results of a project undertaken to determine whether DNA could be used to obtain a better understanding of the population history at Hasanlu.

Glass - Horst Scholze 2012-12-06

When it was learned that Professor Scholze was revising his classic work on the nature, structure, and properties of glass, it was natural to conceive the idea of translating the new edition into English. Professor Scholze enthusiastically endorsed this suggestion and asked for the concurrence of his publisher, Springer-Verlag. Springer-Verlag welcomed the idea and readily agreed to provide support. With the essential agreements in place, Professor Michael Lakin, Professor of German at Alfred University, was asked to do the translation, and I subsequently agreed to work with Professor Lakin to check for technical accuracy. I was happy to accept this task because of my respect for Professor Scholze and because of the value to glass scientists and engineers of having available an English edition of *Glas*. Professor Scholze died before publication of this English edition of his work. However, he had reviewed the entire English text and had approved it. Professor Lakin and I appreciated the confidence he placed in us, and we were gratified with his acceptance of our efforts. His scientific contributions were numerous and important; they will long serve as guideposts for research in many key areas. We hope this translation of *Glas* will help make his legacy accessible to more people. Professor Lakin and I have tried to provide a translation that is accurate and true to the original but that has a distinctive English "flavor"; that is, it is not just a literal translation.

Color in Food - José Luis Caivano 2012-04-05

Controlling, measuring, and "designing" the color of food are critical concerns in the food industry, as the appeal of food is chiefly determined visually, with color the most salient visual aspect. In 2010 at the International Color Association Interim Meeting held in Mar del Plata, Argentina, a multidisciplinary panel of food experts gathered to discuss the importance of color in food from perspectives ranging from chemistry to psychology to engineering. Select individuals from this elite symposium were invited to expand upon their presentations for publication in *Color in Food: Technological and Psychophysical Aspects*. The thematic scope of this volume comprises issues related to color research and application in various stages of food production, processing, marketing, purchasing, and consumption. Some of the questions raised in this thought-provoking volume include: What is the color of a glass of wine? What colors work best for "light" or diet products? Is the color measured in food the color we actually see? How does blueberry color change during storage? How are consumers motivated to buy bottled water based on packaging? What are the psychological effects of tablecloths and tray color on diners? Examining the latest developments in color research and application in relation to food science and technology, the book's multidisciplinary approach makes it a critical resource for food technologists, color researchers, manufacturers of color measurement devices, and chemists and physicists working in the food industry.

The Late Bronze Age and Early Iron Ages of Central Transjordan - Patrick E. McGovern 1986

A critical transition period in the archaeology and history of Palestine—the Late Bronze Age and Early Iron Age—is described in detail from the perspective of a group of sites in the Baq'ah Valley. A major emphasis is on how scientific techniques, including magnetic location of undisturbed burial deposits and analytical reconstruction of very early industries, can be effectively integrated into an archaeological project.

Contrary to traditional views, the evidence supports a relatively peaceful development within a single cultural tradition rather than the intrusion of a new people or segment of the existing population, by invasion, migration, or revolt. University Museum Monograph, 65

Advances in Materials Characterization - David R. Rossington 2012-12-06

The characterization of materials and phenomena has historically been the principal limitation to the development in each area of science. Once what we are observing is well defined, a theoretical analysis rapidly follows. Modern theories of chemical bonding did not evolve until the methods of analytical chemistry had progressed to a point where the bulk stoichiometry of chemical compounds was firmly established. The great progress made during this century in understanding chemistry has followed directly from the development of an analytical chemistry based on the Dalton assumption of multiple proportions. It has only become apparent in recent years that the extension of our understanding of materials hinges on their non-stoichiometric nature. The world of non-Daltonian chemistry is very poorly understood at present

because of our lack of ability to precisely characterize it. The emergence of materials science has only just occurred with our recognition of effects, which have been thought previously to be minor variations from ideality, as the principal phenomena controlling properties. The next step in the historical evolution of materials science must be the development of tools to characterize the often subtle phenomena which determine properties of materials. The various discussions of instrumental techniques presented in this book are excellent summaries for the state-of-the-art of materials characterization at this rather critical stage of materials science. The application of the tools described here, and those yet to be developed, holds the key to the development of this infant into a mature science.

Glass Making in the Greco-Roman World - Patrick Degryse 2015-01-21

New insights into the trade and processing of mineral raw materials for glass making - Free ebook at OAPEN Library (www.oapen.org) This book presents a reconstruction of the Hellenistic-Roman glass industry from the point of view of raw material procurement. Within the ERC funded ARCHGLASS project, the authors of this work developed new geochemical techniques to provenance primary glass making. They investigated both production and consumer sites of glass, and identified suitable mineral resources for glass making through geological prospecting. Because the source of the raw materials used in the manufacturing of natron glass can be determined, new insights in the trade of this material are revealed. While eastern Mediterranean glass factories were active throughout the Hellenistic to early Islamic period, western Mediterranean and possibly Italian and North African sources also supplied the Mediterranean world with raw glass in early Roman times. By combining archaeological and scientific data, the authors develop new interdisciplinary techniques for an innovative archaeological interpretation of glass trade in the Hellenistic-Roman world, highlighting the development of glass as an economic material. Contributors Annelore Blomme (KU Leuven), Sara Boyen (KU Leuven), Dieter Brems (KU Leuven), Florence Cattin (Université de Bourgogne), Mike Carremans (KU Leuven), Veerle Devulder (KU Leuven, UGent), Thomas Fenn (Yale University), Monica Ganio (Northwestern University), Johan Honings (KU Leuven), Rebecca Scott (KU Leuven)

History of Nanotechnology - Madhuri Sharon 2019-03-08

The scientific knowledge of nanoscience and nanotechnology is regarded to be a modern science that evolved after Feynman's concept was formulated in the 1950s. However, Faraday and other scientists in the 19th century showed the science behind the small and its relation to optical properties. And it is now accepted that knowledge of using nanoparticles prevailed during the medieval period as well. This book

takes the readers on a fascinating journey writing the history of nanotechnology based on the evidence of existence from the prehistoric period right up to the contemporary times. Nature utilized nanotechnology during the origin and expansion of the universe and especially in the evolution of living beings on our planet. Early civilizations in different parts of globe fabricated and used materials without having perception of their actual size. This unique historical view systematically evaluates the development of various applications of nanotechnology through the ages and the science behind it. Some of the issues covered include: • How old is nanotechnology? • Pre-historic evidence of knowledge of nanotechnology • Nanotechnology in ancient India • Ayurvedic Bhasma as nanomedicine • Mayan's knowledge of nanotechnology • Nanotechnology during the Roman empire and medieval period • European knowledge in the 19th century • Modern and contemporary history of nanotechnology This book is compilation of existence of scientific knowledge even of the people who existed before there were schools, universities and organized teaching. The author has scoured literature dating back to Mayan ... as well as historical observations A systematic evaluation of development of various applications of nanotechnology and the

science behind it is presented in this book under following headings -How old is Nanotechnology -Pre-historic Evidence of Knowledge of Nanotechnology -Nanotechnology in Ancient India -Ayurvedic Bhasma as Nanomedicine, its use prevails even today -Mayan's Knowledge of Nanotechnology -Nanotechnologists Flourished During Roman Empire and medieval period -European Nano knowledge That Led to Faraday Understands of Gold Nanoparticles -Contemporary History of Nanotechnology
