Knowledge of God and the Discovery of Man - George F. McLean 2003

The Hanoverian Dimension in British History, 1714-1837 - Brendan Simms 2007-02-08

For more than 120 years (1714-1837) Great Britain was linked to the German Electorate, later Kingdom, of Hanover through Personal Union. This made Britain a continental European state in many respects, and diluted her sense of insular apartness. The geopolitical focus of Britain was now as much on Germany, on the Elbe and the Weser as it was on the Channel or overseas. At the same time, the Hanoverian connection was a major and highly controversial factor in British high politics and popular political debate. This volume was the first systematically to explore the subject by a team of experts drawn from the UK, US and Germany. They integrate the burgeoning specialist literature on aspects of the Personal Union into the broader history of eighteenth- and early nineteenth-century Britain. Never before had the impact of the

Hanoverian connection on British politics, monarchy and the public sphere, been so thoroughly investigated.

Mondo Agnelli - Jennifer Clark 2011-11-21

The fascinating story of a century-old automobile dynasty Fiat is one of the world's largest automakers, but when it made headlines by grabbing control of a bankrupt Chrysler in 2009 it was unknown in the U.S. Fiat's against-all-odds swoop on Chrysler--masterminded by Sergio Marchionne, the Houdini-like manager who saved Fiat from its own near-collapse in 2005 - has made the automaker one of the most unlikely winners of the financial crisis. Mondo Agnelli is a new book that looks at the chain of unpredictable events triggered by the death of Gianni Agnelli in 2003. Gianni, the charismatic, silver-haired power broker and style icon, was the patriarch who had lead the company founded by his grandfather in 1899. But Gianni's own son had committed suicide. Without a mature heir, the dynasty and Fiat were rudderless. Backed by Gianni's closest advisors, his serious, shy, and determined grandson John plucked Marchionne from obscurity. Together, they saved the family company and, inadvertently, positioned Fiat as a global trailblazer when the global storm hit. A classic story of ingenuity and hard work, the book portrays a business dynasty that triumphed over adversity and family tragedy because of its own smarts, sweat, and ability to bend the rules A an engaging tale for those interested in the stories behind the economic crash, the book contains never-before reported material about how Fiat succeeded in making Chrysler profitable where both Daimler AG and Cerberus, its previous owners, had failed. A story for a wide audience, from car buffs, business readers, lovers of Italy, and anyone fascinated by the lifestyle of Europe's most glamorous industrial dynasty, this book tells the tale of how Fiat achieved the seemingly impossible -- turning around an American automotive icon everyone else had given up for dead.

Climate Change and Ecosystems - Shah Fahad 2022

"The global population is projected to increase by 3.3 billion, from 6.7 to 10 billion during 2008 to 2100. As a result, soil degradation and desertification are growing due to the increasing demand of the food, feed, fiber and fuel on finite soil resources. The problem of global food insecurity may be further worsened by the threat of global warming. Climate change is showing its impacts in term of increasing temperatures, variable rainfall and an increase in climate-related extreme like floods, droughts, cyclone, sea level rise, salinity and soil erosion. Agriculture sector is the most sensitive to the climate changes because the climate of a region/country determines the nature and characteristics of vegetation and crops. Increase in the mean seasonal temperature and decrease in effective precipitation can reduce the duration of many crops, may lead to outbreaks of pests and diseases, and hence reduce final yield ultimately affecting the food security of the country. Despite the positive impact of CO2 fertilization, the net productivity may decrease because of an increase in respiration rate, drought stress and nutrient deficiency. Such as, for every 75 ppm increase in CO2 concentration rice yields will increase by 0.5 t ha⁻¹, but yield will decrease by 0.6 t ha⁻¹ for every 1 °C increase in temperature. The global agricultural productivity is expected to decrease from 3-16 % by 2080. The estimated decrease in agricultural productivity in the developing countries is 10-25% in 2080s, where average air temperature has already near or above crop tolerance levels. This book is intended to serve as a stimulating collection that will contribute to debate and reflection on the sustainable future of agriculture and food production in the face of global change. Features: Brings together a

multidimensional group of international scholars exploring the ethical dimensions of climate change and ecosystem. New strategies have pointed in this book for the better sustainable development. Design to cater a good overview of major challenges facing policy makers, researchers and ultimately humankind in dealing with climate change. This book summarizes the diverse features of vulnerability, adaptation, and amelioration of climate change in respect to plants, crops, soil, and microbes for the sustainability of the agricultural sector and, ultimately, food security for the future. Provide a state-of-the-art description of the physiological, biochemical, and molecular status of the understanding of abiotic stress in plants"--

PAD #13 - Marina Parente 2017-01-10

The issue, edited by Marina Parente and Carla Sedini, founder of D4T - Design for Territories Research Network of Politecnico di Milano, aims to contribute to this new field of study helping readers understand the design-led phenomenon, which involves the tangible resources of a territory (like monumental and landscape heritage) as well as the intangible ones (like cultural identity and people values). The main topic of this issue is: How could the design develop the local dimension enhancing and revitalizing the territory at the same time? Furthermore, with issue #13 we are opening a series with artists' images that will match the articles with a visual research connected to the proposed subject. Photographer Carla Sedini, co-editor with Marina Parente of this issue, gave us permission to publish a selection of images about "design that is not there", "design that may be" and "tacit design" within urban territories around the world. We hope that many creatives will interpret the "Suggestions for Design" launched here. The numerous contributors to this issue are: Miriam Bicocca; Letizia Bollini; Marco Borsotti & Sonia Pistidda; Raffaella Fagnoni & Silvia Pericu; Davide Fassi, Laura Galluzzo & Anna Linda De Rosa; Rosanna Gaddi; Helena Gentili & Daria Casciani; José Luis González Cabrero, Ana Margarita Avila Ochoa, Ana Calvera, Debora Giorgi, Yosser Halloul, Insaf Khaled & Rosa Povedano; Maria Antonietta Sbordone; Reham Mohsen & Andreas Sicklinger; Carla Sedini & Luca Fois.
