Embodiment and the Treatment of Eating Disorders: The Body as a Resource in Recovery - Catherine Cook-Cottone 2020-09-22

Tools for the clinician to help clients turn their bodies into resources for healing from eating disorders. Embodiment refers to the lived attunement of the inner and outer experience of self. Cognitions are aligned with the sensing and feeling body. Further, in an attuned experience of self, positive embodiment is maintained by internally focused tools, such as self-care practices that support physiological health, emotional well-being, and effective cognitive functioning. For those who suffer from eating disorders, this is not the case; in fact, the opposite is true. Disordered thinking, an unattuned sense of self, and negative cognitions abound. Turning this thinking around is key to client resilience and treatment successes. Catherine Cook-Cottone provides tools for clinicians working with clients to restore their healthy selves and use their bodies as a positive resource for healing and long-term

health. The book goes beyond traditional treatments to talk about mindful self-care, mindful eating, yoga, and other practices designed to support self-regulation.

Abnormal Psychology - Ann M. Kring 2014-12-31

Altered States of Consciousness - Marc Wittmann 2018-09-04

What altered states of consciousness—the dissolution of feelings of time and self—can tell us about the mystery of consciousness. During extraordinary moments of consciousness—shock, meditative states and sudden mystical revelations, out-of-body experiences, or drug intoxication—our senses of time and self are altered; we may even feel time and self dissolving. These experiences have long been ignored by mainstream science, or considered crazy fantasies. Recent research, however, has located the neural underpinnings of these altered states of mind. In this book, neuropsychologist Marc Wittmann shows how experiences that disturb or widen our everyday understanding of the self can help solve the mystery of consciousness. Wittmann explains that the

relationship between consciousness of time and consciousness of self is close; in extreme circumstances, the experiences of space and self intensify and weaken together. He considers the emergence of the self in waking life and dreams; how our sense of time is distorted by extreme situations ranging from terror to mystical enlightenment; the experience of the moment; and the loss of time and self in such disorders as depression, schizophrenia, and epilepsy. Dostoyevsky reported godly bliss during epileptic seizures; neurologists are now investigating the phenomenon of the epileptic aura. Wittmann describes new studies of psychedelics that show how the brain builds consciousness of self and time, and discusses pilot programs that use hallucinogens to treat severe depression, anxiety, and addiction. If we want to understand our consciousness, our subjectivity, Wittmann argues, we must not be afraid to break new ground. Studying altered states of consciousness leads us directly to the heart of the matter: time and self, the foundations of consciousness.

How to Rethink Human Behavior - Bernard Guerin 2016-05-20
Developed from the author's long teaching career, *How to Rethink Human Behavior* aims to cultivate practical skills in human observation and analysis, rather than offer a catalogue of immutable 'facts'. It synthesizes key psychological concepts with insights from other disciplines, including sociology, social anthropology, economics, and history. The skills detailed in the book will help readers to observe people in their contexts and to analyze what they observe, in order to make better sense of why people do what they do, say what they say, and think what they think. These methods can also be applied to our own thoughts, talk and actions - not as something we control from 'within' but as events constantly being shaped by the idiosyncratic social, cultural, economic and other contexts in which our lives are immersed. Whether teaching, studying, or reading for pleasure, this book will help readers learn: How to think about people with ecological or contextual thinking How your thinking is a conversation with other people How to analyze talk and conversations as social strategies How capitalist economies change how you act, talk and think in 25 ways How living in modern society can be linked to generalized anxiety and depression How to Rethink Human Behavior is important interdisciplinary reading for students and researchers in all fields of social science, and will especially appeal to those interested in mental health.
