*Gestione delle crisi in medicina d'urgenza e terapia intensiva* - Michael St.Pierre 2013-10-17  
Le situazioni critiche in

medicina d'urgenza e in terapia intensiva rappresentano una tra le sfide più difficili nella pratica clinica. La natura stessa dell'ambiente di cura, l'incertezza, il rischio elevato, i tempi ristretti e lo stress, rendono queste discipline

particolarmente vulnerabili agli errori nella gestione dei pazienti. Nell'ultimo decennio è diventato sempre più evidente, che la capacità di erogare trattamenti sicuri in queste circostanze dipende da un'approfondita conoscenza dei meccanismi all'origine dell'errore umano. Questo volume, che è la traduzione italiana della seconda edizione di *Crisis Management in Acute Care Settings*, propone una rassegna originale e completa di tutti i problemi correlati ai fattori umani, rilevanti per la sicurezza dei pazienti durante l'erogazione di trattamenti urgenti. Le energie di medici e psicologi si sono mescolate in un testo facilmente accessibile, che aiuterà i medici e altri professionisti della salute a comprendere meglio i principi del comportamento umano e del processo decisionale nelle situazioni critiche, per evitare errori e garantire un trattamento più sicuro ai loro pazienti.

*The Moment of Liberation in Western Europe* - Gerd-Rainer Horn 2020-03-19  
The Moment of Liberation in Western Europe, 1943-1948, regards the final two years of World War II and the immediate post-liberation period as a moment in twentieth century history, when the shape and contours of postwar Western Europe appeared highly uncertain and various alternatives and conflicting visions were up for grabs. After close to six years of total war, Nazi terror, and brutal occupation policies, a

growing number of Europeans were no longer content solely to fight for national liberation from fascist control. Having staked their lives in military and civilian resistance to Nazism and Italian fascism across the continent, surviving activists were aiming to ensure that such a political and social catastrophe would never befall Europe again. In the closing moments of World War II, hundreds of thousands of antifascist activists had begun to identify with the famous quote penned by the exiled German social theorists, Max Horkheimer, who had boldly proclaimed in early September 1939: 'Whoever is not prepared to talk about capitalism should also remain silent about fascism.' The economic and political elites in prewar societies were increasingly regarded as co-responsible for war, fascism, and occupation policies, from which many had benefited significantly and often enthusiastically. There were extensive popular social movements at work in almost every single state which aimed

to construct postwar societies in which grassroots democracy and the free association of rank-and-file activists would replace the profit principle and the top-down Jacobin orientation by traditional elites. This study for the first time reconstructs the parameters of this contest over the shape of postwar Western Europe from a consistently transnational perspective.

**New Metropolitan Perspectives** - Carmelina Bevilacqua 2020-08-31

This book presents the outcomes of the symposium "NEW METROPOLITAN

PERSPECTIVES," held at Mediterranea University, Reggio Calabria, Italy on May 26-28, 2020. Addressing the challenge of Knowledge Dynamics and Innovation-driven Policies Towards Urban and Regional Transition, the book presents a multi-disciplinary debate on the new frontiers of strategic and spatial planning, economic programs and decision support tools in connection with urban-rural area networks and metropolitan centers. The respective papers focus on six major tracks: Innovation dynamics, smart cities and ICT; Urban regeneration, community-led practices and PPP; Local development, inland and urban areas in territorial cohesion strategies; Mobility, accessibility and infrastructures; Heritage, landscape and identity; and Risk management, environment and energy. The book also includes a Special Section on Rhexion United Nations 2020-2030. Given its scope, the book will benefit all researchers, practitioners and

policymakers interested in issues concerning metropolitan and marginal areas.

*The Just Culture Principles in Aviation Law* - Francesca Pellegrino 2019-09-09

This book reviews and critically analyzes the current legal framework with regard to a more just culture for the aviation sector. This new culture is intended to protect front-line operators, in particular controllers and pilots, from legal action (except in the case of willful misconduct or gross negligence) by creating suitable laws, regulations and standards. In this regard, it is essential to have an environment in which all incidents are reported, moving away from fears of criminalization. The approach taken until now has been to seek out human errors and identify the individuals responsible. This punitive approach does not solve the problem because frequently the system itself is (also) at fault. Introducing the framework of a just culture

could ensure balanced accountability for both individuals and complex organizations responsible for improving safety. Both aviation safety and justice administration would benefit from this carefully established equilibrium.

**Crossing the Quality Chasm**  
- Institute of Medicine  
2001-08-19

Second in a series of publications from the Institute of Medicine's Quality of Health Care in America project  
Today's health care providers have more research findings and more technology available to them than ever before. Yet recent reports have raised serious doubts about the quality of health care in America. Crossing the Quality Chasm makes an urgent call for fundamental change to close the quality gap. This book recommends a sweeping redesign of the American health care system and provides overarching principles for specific direction for policymakers, health care leaders, clinicians, regulators,

purchasers, and others. In this comprehensive volume the committee offers: A set of performance expectations for the 21st century health care system. A set of 10 new rules to guide patient-clinician relationships. A suggested organizing framework to better align the incentives inherent in payment and accountability with improvements in quality. Key steps to promote evidence-based practice and strengthen clinical information systems. Analyzing health care organizations as complex systems, Crossing the Quality Chasm also documents the causes of the quality gap, identifies current practices that impede quality care, and explores how systems approaches can be used to implement change.

Lean Innovation in Sanità. Principi, Teorie e Casi Studio - Carmen Raimondo 2014-05-11  
Con il presente lavoro (in edizione riveduta, corretta e approfondita), frutto di un'attività di ricerca triennale,

s'intende analizzare la diffusione dell'approccio "Lean Management" nel contesto produttivo e sanitario, attraverso uno studio approfondito della letteratura, la presentazione di casi studio di eccellenza e un'indagine empirica. È stato evidenziato come le performance e i benefici perseguiti derivino dall'interazione dinamica di numerosi attori in un contesto di network complessi. Esso, attraverso una serie di principi e strumenti, è diretto a creare un sistema olistico di relazioni fiduciarie tra individui (Lean Organization) e gruppi (Lean Network), focalizzato sulle aspettative ed esigenze del paziente. La capacità di identificare ed eliminare gli sprechi insiti nei processi di lavoro per creare valore, in termini di salute e soddisfazione del customer interno ed esterno, rappresenta la dimensione etica, strategica e operativa del modello di gestione Lean. Sotto questa prospettiva di analisi, l'approccio Lean è stato definito "disruptive

innovation", ovvero una modalità innovativa di gestione, diretta a contribuire in maniera significativa allo sviluppo di nuovi modelli, che va a scontrarsi e sostituirsi con l'esistente, richiedendo un processo di strategia separato, prima di concretizzare il processo definitivo di integrazione. Infine, attraverso un'indagine empirica condotta su un nucleo selezionato di realtà sanitarie italiane, si è inteso dimostrare la necessità di sviluppare tali capacità d'interazione, al fine di promuovere il trasferimento delle Lean Best Practices in altre organizzazioni.

Assessing Chronic Disease Management in European Health Systems - World Health Organization 2015-12-16

This publication explores some of the key issues, ranging from interpreting the evidence base to assessing the policy context

for, and approaches to, chronic disease management across Europe. Drawing on 12 detailed country reports (available in a second, online volume), the study provides insights into the range of care models and the people involved in delivering these; payment mechanisms and service user access; and challenges faced by countries in the implementation and evaluation of these novel approaches.

**Computational Science and Its Applications - ICCSA**

**2019** - Sanjay Misra

2019-06-28

The six volumes LNCS 11619-11624 constitute the refereed proceedings of the 19th International Conference on Computational Science and Its Applications, ICCSA 2019, held in Saint Petersburg, Russia, in July 2019. The 64 full papers, 10 short papers and 259 workshop papers presented were carefully reviewed and selected from numerous submissions. The 64 full papers are organized in the following five general tracks: computational methods,

algorithms and scientific applications; high performance computing and networks; geometric modeling, graphics and visualization; advanced and emerging applications; and information systems and technologies. The 259 workshop papers were presented at 33 workshops in various areas of computational sciences, ranging from computational science technologies to specific areas of computational sciences, such as software engineering, security, artificial intelligence and blockchain technologies. *Digital Transformation of the Design, Construction and Management Processes of the Built Environment* - Bruno Daniotti 2019-01-01

This open access book focuses on the development of methods, interoperable and integrated ICT tools, and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and

technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R&D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction, and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process - owners, designers, constructors, and faculty managers - as well as the research sector.

**Strengthening Agricultural Resilience in the Face of Multiple Risks** - Katherine

Baldwin (Agricultural economist) 2020

This report explores how countries can strengthen the resilience of their agricultural sectors to multiple risks. A shifting risk landscape in agriculture - due to increasing weather variability, natural hazards, pests and diseases, and market shocks - will require public and private actors to consider the risk landscape over the long term, place a greater emphasis on what can be done ex ante to reduce risk exposure and increase preparedness, and prioritise investments that build resilience capacities both on-farm and for the sector as a whole. This report offers a framework for applying resilience thinking to risk management in agriculture,

and explores how four OECD countries - Australia, Canada, Italy and the Netherlands - are mainstreaming resilience into their agricultural risk management policy frameworks.

[Agricultural Policy Monitoring and Evaluation 2019](#) - OECD  
2019-07-01

This annual report monitors and evaluates agricultural policies spanning all 6 continents, including the 36 OECD countries, the 6 non-OECD EU Member States, and 12 emerging economies. It is a unique source of up-to date estimates of support to agriculture using a comprehensive system of measuring and classifying support to agriculture - the Producer and Consumer Support Estimates (PSEs and CSEs), the General Services Support Estimate (GSSE) and related indicators - which provide insight into the increasingly complex nature of agricultural policy and serve as a basis for OECD's agricultural policy monitoring and evaluation.

**Waste Management and the Environment VIII** - C.A.

Brescia 2016-07-14

Waste Management and the Environment VIII contains papers present at the 8th International Conference on Waste Management and the Environment, organised every two years by the Wessex Institute. The contents were contributed by professionals, researchers, government departments and local authorities and cover the current situation of waste management. Waste Management is one of the key problems of modern society due to the ever-expanding volume and complexity of discarded domestic and industrial waste. There is a

need to establish better practices and safer solutions for waste disposal. This requires further investigation into disposal methods and recycling, as well as new technologies to monitor waste disposal sites, clean technologies, waste monitoring, public and corporate awareness and general education.

Unfortunately many of the policies adopted in the past were aimed at short-term solutions without regard to the long-term implications on health and the environment, leading in many cases to the need to take difficult and expensive remedial action. The development of sustainable strategies is the preferred trend for Waste Management. The approach which has emerged as the most promising has been called 4Rs, where reduction, reuse, recycling and recovery (including the sale of waste as Secondary Raw Materials (SRM) and of Refuse Derived Fuel (RDF)) are seen as the best actions. This largely decreases the volume of waste

that needs final disposal. Contents cover such topics as: Environmental impact; Reduce, reuse, recycle and recovery (4Rs); Waste incineration and gasification; Energy from waste; Industrial waste management; Hazardous waste; Agricultural waste; Wastewater; eWaste; Landfill optimisation and mining; Remote sensing; Thermal treatment; Emergent pollutants; Environmental remediation; Direct and indirect pre-treatment of MSW; Disposal of high-level radioactive waste; Legislation; Behavioural issues.

*Beach Management Tools - Concepts, Methodologies and Case Studies* - Camilo M. Botero 2017-12-04

This book provides an overview of beach management tools, including carrying capacity, beach nourishment, environmental and tourism

awards (like Blue Flag or others), bathing water quality, zoning, beach typologies, quality index, user's perception, interdisciplinary beach monitoring, coastal legislation, shore protection, social and economic indicators, ecosystem services, and coastal governance (applied in beach case studies). Beaches are one of the most intensely used coastal ecosystems and are responsible for more than half of all global tourism revenues, and as such the book introduces a wide range of state-of-the-art tools that can be used to deal with a variety of beach challenges. Each chapter features specific types of tools that can be applied to advantage in beach management practices. With examples of local and regional case studies from around the globe, this is a valuable resource for anyone involved in beach management.

Volcanic Hazards - R. J. Blong 2013-10-22

Volcanic Hazards: A Sourcebook on the Effects of Eruptions provides a

comprehensive discussion of volcanic eruptions and their effects. This volume provides background data on volcanic activity with attention directed specifically at those types of activity and those characteristics which are hazardous. It establishes the direct effects of volcanic eruptions on humans in terms of death and injuries, and social aspects such as perception of eruption hazards, evacuation, panic, looting, and religious beliefs. It discusses the indirect consequences of volcanic eruptions for humans by illustrating the effects on buildings, utilities, communication networks and machinery, agriculture, and commercial activity. This book should be of interest to planners, engineers, city administrators, agriculturalists, and emergency services personnel who must deal with the effects of volcanic hazards; to volcanologists and geologists who did not know eruptions affected so many things; to geographers, environmentalists, and natural

hazard scientists who are interested in the interrelatedness of phenomena; and to citizens who have experienced, or might yet experience, some of these effects.

### **Maternity and Paternity at Work** - Laura Addati

2014-05-13

This report provides a picture of where we stand and what we have learned so far about maternity and paternity rights across the world. It offers a rich international comparative analysis of law and practice relating to maternity protection at work in 185 countries and territories, comprising leave, cash benefits, employment protection and non-discrimination, health protection, breastfeeding arrangements at work and childcare. Expanding on previous editions, it is based on an extensive set of new legal and statistical indicators, including coverage in law and in practice of paid maternity leave as well as statutory provision of paternity and parental leave and their

evolution over the last 20 years. The report also takes account of the recent economic crisis and austerity measures. It shows how well national laws and practice conform to the ILO Maternity Protection Convention, 2000 (No. 183), its accompanying Recommendation (No. 191) and the Workers with Family Responsibilities Convention, 1981 (No. 156), and offers guidance on policy design and implementation. This report shows that a majority of countries have established legislation to protect and support maternity and paternity at work, even if those provisions do not always meet the ILO standards. One of the persistent challenges is the effective implementation of legislation, to ensure that all workers are able to benefit from these essential labour

rights.
