Description of the clinical approach is built around the questions most commonly asked and is designed to get medical students to work systematically as if they have been practising medicine for years. A Clinical Guide to Organisational Health - Cecilia Dean 2015-06-18

Is your organisation healthy enough to survive and operate effectively? Popular organisational health checks generally focus on a company's financial status and its ability to compete in the market. In the human body, healthy functioning of all the organs comes before addressing competitive fitness, and this should also be the case with organisations. This book accepts the similarity between the functioning of living organisms and organisations as proposed by functionalists. This allows the adoption of a holistic diagnostic model, as used by medical practitioners, in order to determine an overall perspective of the state of health of an organisation. The model explores and diagnoses the functional categories of Survival, Protection, Operations, Information, Language and Strategy (SPOILS), before combining the health prognosis with fitness programmes. A single case study, based on an actual business, demonstrates the usage of the diagnostic model throughout the book and forms a link bringing the functions together.

Clinical Skills and Examination - Robert Turner 2009-06-02

This practical, thorough, and concise pocketbook is the perfect companion to the clinical skills needed for life on the wards. It covers all the essential elements that lie at the heart of medical practice in which students must prove their competence, and lays the foundations needed for the rest of their medical career. Part One covers history taking, examination and communication; and Part Two provides an overview of key practical procedures and diagnostic skills, all of which are typically examined via Objective Structured Clinical Examinations (OSCEs) or other clinical case format examinations. The coverage of examination skills alongside practical procedures and explanations of typical tests and investigations make this pocketbook invaluable for students new to clinical medicine. The authors are specialists in teaching clinical skills from both a medical and surgical perspective, and are perfectly placed to cover these cornerstones of medical practice.

Lecture Notes on Clinical Skills - Robert Turner 1997-08-22

Lecture Notes on Clinical Skills (formerly known as *Lecture Notes on History Taking and Examination*) is a core text that introduces the basic principles of: how to take a complete history, how to examine a patient thoroughly, how to request the most appropriate investigations, and how to put all of this together and come to a diagnosis. Rather than being a peripheral aspect of a trainee's education, it is now appreciated that the acquisition and application of these skills is now of paramount importance. The revised title and improved illustrations, with full colour photographs, stress the highly practical nature of this book, which is now established as a firm favourite of medical students, junior doctors and allied health professionals.

Essays in Good Practice: Lecture notes in contemporary General Practice - Chris Heath FRCP MRCP

Good Practice: What it means to put the patient first, not politics, posturing, pretentiousness, protocols or process. This is a text book for all doctors but especially GPs, Appraisers and Registrars. It is written by a 40 year plus front line NHS doctor who for most of his career worked twice to three times the current doctors' Working Time Directive limited week. Chris Heath has been a Paediatric Lecturer in a teaching hospital, an Anaesthetist, various junior specialists and a GP for over 30 years in 3 different practices. He has been a GP Trainer and Appraiser and has seen politics and political correctness harm patients' interests constantly over the last half of his career. From the way the NHS selects young doctors to the way they are educated and assessed, the best interests of the patient are largely ignored. This is a text book but it also contains home truths, advice, insights and original, honest guidance on being a safe, effective doctor. As well as giving an assessment of what has gone wrong with the NHS over the last 20 years, the author explains why today's politicians, medical schools, Royal Colleges and many doctors will resist the changes essential to put the patients' needs first again. 1 Politics, Who we are, The CQC etc 2 Administration, Training, The Consultation and Teaching 3 Basic Biology 4 Acute Medicine in General Practice 5 Alcohol 6 Allergy 7 Analgesics 8 Anticoagulants, Clotting 9 The Breast 10 Cancer and Terminal Care 11 Cardiology 12 Useful Clinical Signs, Eponymous diseases 13 Dermatology 14 Diabetes, Metabolism 15 Diet, Vitamins and Nutrition 16 Driving 17 Odd drugs 18 Ear, Nose and Throat 19 Gastroenterology 20 Geriatrics 21 Haematology 22 Hormones 23 Immunisation and Vaccines 24 Infections, Antibiotics, Microbiota 25 Legal Issues 26 Liver 27 Miscellaneous 28 Musculoskeletal, Orthopaedics, Sports, NSAIDs 29 Neurology 30 Ophthalmology 31 Paediatrics 32 Pathology 33 Pregnancy, Obstetrics and Gynaecology, Contraception 34 Psychiatry and Controlled Drugs 35 Respiratory 36 Sex and STDs 37 Sleep 38 Travel 39 Urology 40 Work References
