New Frontiers for College Education - Jim Gallacher 2018-08-06

The college sector is facing a growing number of new challenges caused by technological change, globalisation and the growth of mass higher education. *New Frontiers for College Education* considers the impact these changes have had and explores the developing role of college education in countries throughout the world. Whilst analysing the issues associated with providing high quality vocational education and training, the book also reflects on the role of colleges in widening access to both further and higher education. Drawing together contributions from leading international academics, policymakers and practitioners, the book explores common themes across these diverse societies, as well as some of the key challenges experienced within individual countries. It considers the distinctive contributions that colleges can make in responding to these challenges through apprenticeships and other types of vocational education and training. Contributors discuss the growing emphasis on creating more integrated systems of tertiary education, recognising that colleges and universities are now expected to work more closely together and that these diverse demands can be difficult to reconcile. Providing an authoritative and timely analysis of the changing

role of colleges in contemporary society, this book will be of great interest to academics, researchers and postgraduate students in the areas of further and higher education, vocational education and training, lifelong learning, and skills development. It should also be essential reading for policymakers, as well as practitioners working in colleges and other institutions of higher and further education.

Achieving Organizational Excellence - Flevy Lasrado 2018-05-01

This book bridges two essential aspects of assessing and achieving business excellence in 21st-century organizations. The author argues that transnational companies face a twofold challenge: managing global knowledge networks and multicultural project teams on the one hand; and interacting and collaborating across boundaries using global communication technologies, on the other. The author also argues that this dual challenge calls for the creation of a business excellence program that fits and thrives within these multicultural environments. In response, he reviews corporate practices in quality management and

business excellence frameworks that have been extensively used on a transnational scale to drive organizational performance. The book approaches quality management as an element that is no longer a choice, but has now become a necessity if companies want to compete in highly globalized environments.

Metaskills - Marty Neumeier 2012-12-20

In a sweeping vision for the future of work, Neumeier shows that the massive problems of the 21st century are largely the consequence of a paradigm shift—a shuddering gear-change from the familiar Industrial Age to the unfamiliar "Robotic Age," an era of increasing man-machine collaboration. This change is creating the "Robot Curve," an accelerating waterfall of obsolescence and opportunity that is currently reshuffling the fortunes of workers, companies, and national economies. It demonstrates how the cost and value of a unit of work go down as it moves from creative to skilled to rote, and, finally, to robotic. While the Robot Curve is dangerous to those with brittle or limited skills, it offers unlimited potential to those with metaskills—master skills that enable

other skills. Neumeier believes that the metaskills we need in a post-industrial economy are feeling (intuition and empathy), seeing (systems thinking), dreaming (applied imagination), making (design), and learning (autodidactics). These are not the skills we were taught in school. Yet they're the skills we'll need to harness the curve. In explaining each of the metaskills, he offers encouragement and concrete advice for mastering their intricacies. At the end of the book he lays out seven changes that education can make to foster these important talents. This is a rich, exciting book for forward-thinking educators, entrepreneurs, designers, artists, scientists, and future leaders in every field. It comes illustrated with clear diagrams and a 16-page color photo essay. Those who enjoy this book may be interested in its slimmer companion, *The 46 Rules of Genius*, also by Marty Neumeier. Things you'll learn in *Metaskills*:

- How to stay ahead of the "robot curve"
- How to account for "latency" in your predictions
- The 9 most common traps of systems behavior
- How to distinguish among 4 types of originality
- The 3 key steps in generating innovative solutions
- 6 ways to think like Steve Jobs
- How to recognize the 3 essential qualities of beauty
- 24 aesthetic tools you can apply to any kind of work
- 10 strategies to trigger breakthrough ideas
- Why every team needs an X-shaped person
- How to overcome the 5 forces arrayed against simplicity
- 6 tests for measuring the freshness of a concept
- How to deploy the 5 principles of "unclinging"
- The 10 tests for measuring great work
- How to sell an innovative concept to an organization
- 12 principles for constructing a theory of learning
- How to choose a personal mission for the real world
- The 4 levels of professional achievement
- 7 steps for revolutionizing education

From the back cover "Help! A robot ate my job!" If you haven't heard this complaint yet, you will. Today's widespread unemployment is not a jobs crisis. It's a talent crisis. Technology is taking every job that doesn't need a high degree of creativity, humanity, or leadership. The solution? Stay on top of the Robot Curve--a constant waterfall of obsolescence and opportunity fed by competition and innovation. Neumeier presents five metaskills--feeling, seeing, dreaming, making, and learning--that will accelerate your success in the Robotic Age.
