**Corporate Data Quality** - Boris Otto 2015-10-12

Daten sind die strategische Ressource des 21.

Jahrhunderts. Es findet kein Geschäftsprozess, keine Kommunikation zwischen Geschäftspartnern, keine Wertschöpfung statt, ohne dass die involvierten Personen, Maschinen und IT-Systeme Daten nutzen, erzeugen oder verändern. Trends wie die Digitalisierung, Industrie 4.0 und Social Media tragen ebenfalls dazu bei, dass Datenmanagement zu einer Kernkompetenz für erfolgreiche Unternehmen dieser Zeit geworden ist. Damit Daten ihren ganzen Wert entfalten können, müssen sie stets in angemessener Qualität zur Verfügung stehen. Dies gilt besonders für Stammdaten, die zentralen Geschäftsobjekte eines Unternehmens. Dieses Buch zeigt einen ganzheitlichen Ansatz zum qualitätsbewussten Management von Stammdaten auf und richtet sich damit sowohl an Praktiker als auch an die Wissenschaft. *Corporate Data Quality* - Boris Otto 2015-12-08

Data is the foundation of the digital economy. Industry 4.0 and digital services are producing so far unknown quantities of data and make new business models possible. Under these circumstances, data quality has become the critical factor for success. This book presents a holistic approach for data quality management and presents ten case studies about this issue. It is intended for practitioners dealing with data quality management and data

governance as well as for scientists. The book was written at the Competence Center Corporate Data Quality (CC CDQ) in close cooperation between researchers from the University of St. Gallen and Fraunhofer IML as well as many representatives from more than 20 major corporations. Chapter 1 introduces the role of data in the digitization of business and society and describes the most important business drivers for data quality. It presents the Framework for Corporate Data Quality Management and introduces essential terms and concepts. Chapter 2 presents practical, successful examples of the management of the quality of master data based on ten cases studies that were conducted by the CC CDQ. The case studies cover every aspect of the Framework for Corporate Data Quality Management. Chapter 3 describes selected tools for master data quality management. The three tools have been distinguished through their broad

Chapter 4 summarizes the essential factors for the successful management of the master data quality and provides a checklist of immediate measures that should be addressed immediately after the start of a data quality management project. This guarantees a quick start into the topic and provides initial recommendations for actions to be taken by project and line managers. 2006 in the subject Business economics - Business Management, Corporate Governance, grade: 1,3, University of Applied Sciences Essen, course: International Management, 74 entries in the bibliography, language: English, abstract: During upswing or boom phases, companies tend to diversify their products and services either by acquisitions or by the foundation of subsidiaries active in different businesses. As the market situation or the overall economic situations change, companies have to adapt their strategy and structure to the current market. If there are changes in the general market situation, e.g. by the entry of new competitors, companies might need to restructure to be able to compete. In times of economic downturns, most companies need to restructure due to economic problems and high in-house costs, caused by high complexity and low transparency within the company. Moreover, there seems to be a change in

paradigms in the market. Whereas in the 60's (in the US) conglomerates were a prominent way to increase the company value, the current market pays no premium for being a large company. Since the 80's in the US and the late 90's in Western Europe, shareholder value rather is increased by a focused approach on core markets and selling or spinning-off the side-businesses. Major spin-offs were conducted in Western Europe during the recent years, e.g. the spin-off of Infineon from Siemens in 1999 which was followed by a listing of Infineon at the Frankfurt Stock Exchange in 2000, the spin-off of Hypo Real Estate from HypoVereinsbank in 2003, freeing the HypoVereinsbank from their difficult real estate financing business and, against the odds, lead to a successful performance of Hypo Real Estate at the Stock Market<sup>7</sup> or the spin-off of Lanxess from Bayer in 2005. Looking at the current development of the capital market, European

conglomerates seem all to work on their restructuring and on their focus on a certain area<sup>8</sup>. Recently announced or publicly evaluated transactions include e.g. MAN selling the majority of its printing machine division to Allianz Capital Partners, Linde evaluating the sale of their fork-lift division, Electrolux envisaging the spin-off and listing of their outdoor division in the company „Husqvarna”, to which shareholders consented in April 2006. In the course of this paper, we will evaluate the motives and value drivers of a spin-off with view on the parent company, the spin-off and the capital market including investors and bondholders.

### **China's Quest for Foreign Technology** - William C. Hannas 2020-09-22

This book analyzes China's foreign technology acquisition activity and how this has helped its rapid rise to superpower status. Since 1949, China has operated a vast and unique system of foreign technology spotting and transfer aimed at accelerating

civilian and military development, reducing the cost of basic research, and shoring up its power domestically and abroad—without running the political risks borne by liberal societies as a basis for their creative developments. While discounted in some circles as derivative and consigned to perpetual catch-up mode, China's "hybrid" system of legal, illegal, and extralegal import of foreign technology, combined with its indigenous efforts, is, the authors believe, enormously effective and must be taken seriously.

Accordingly, in this volume, 17 international specialists combine their scholarship to portray the system's structure and functioning in heretofore unseen detail, using primary Chinese sources to demonstrate the perniciousness of the problem in a manner not likely to be controverted. The book concludes with a series of recommendations culled from the authors' interactions with experts worldwide. This book will be of much interest to

*Chemical/Instrumental Approaches to the Evaluation of Wine Chemistry* - Rosa Perestrelo 2020-05-27

Wine is a widely consumed beverage due to its unique and pleasant sensory properties. Wine is composed of more than one thousand chemical compounds (e.g., alcohols, esters, acids, terpenoids, phenolic compounds, flavonoids, anthocyanins, minerals, and vitamins, among others) resulting from several chemical and biochemical processes. Microextraction techniques in tandem with high-resolution analytical instruments have been applied by wine researchers to expand the knowledge of wine's chemical composition with the purposes of improving wine quality, supporting winemaker decisions related to the winemaking process, and guaranteeing the authenticity of wine. As a result, we

proposed

“Chemical/Instrumental Approaches to the Evaluation of Wine Chemistry” as a topic for a Special Issue in *Molecules*. This Special Issue aims to provide an update on state-of-the-art extraction procedures (e.g., solid-phase microextraction (SPME)) and analytical tools (e.g., nuclear magnetic resonance (NMR), inductively coupled plasma mass spectrometry (ICP-MS), ultra-performance liquid chromatography tandem mass spectrometry (UPLC-MS/MS)), emphasizing their use as suitable platforms for the establishment of the chemical composition of wine (volatonic profile, antioxidants, phenolic pattern, and elemental composition, among others). Information related to wine sensorial properties, contaminants, authenticity, and chemometric tools used for data treatment are described in this Issue.

country who took action when pollution from heavy industry contaminated their towns. Across the United States, thousands of people, most of them in low-income or minority communities, live next to heavily polluting industrial sites. Many of them reach a point at which they say “Enough is enough.” After living for years with poisoned air and water, contaminated soil, and pollution-related health problems, they start to take action—organizing, speaking up, documenting the effects of pollution on their neighborhoods. In *Sacrifice Zones*, Steve Lerner tells the stories of twelve communities, from Brooklyn to Pensacola, that rose up to fight the industries and military bases causing disproportionately high levels of chemical pollution. He calls these low-income neighborhoods “sacrifice zones.” And he argues that residents of these sacrifice zones, tainted with chemical pollutants, need additional regulatory protections. *Sacrifice Zones* goes beyond

the disheartening statistics and gives us the voices of the residents themselves, offering compelling portraits of accidental activists who have become grassroots leaders in the struggle for environmental justice and details the successful tactics they have used on the fenceline with heavy industry.

**DAX-Firms and Human Rights** - Carlo Manuel Drauth  
2017-11-07

Carlo Manuel Drauth explores under which conditions multinational enterprises systematically manage their human rights impacts with a view to preventing corporate human rights violations across their operations. Using a multi-method research design and focusing on the 30 largest German firms, the author finds that it is neither institutional forces (e.g., standards or norms) nor stakeholder pressures (e.g., from NGOs or trade unions) alone, but their combined effect that leads to a systematic human rights management at the firm-level. This finding informs a new

*100 Pioneers in Efficient Resource Management* - Mario Schmidt 2018-12-04

The book presents about 100 current examples of how energy and materials can be saved in manufacturing companies. They serve to show which measures can be used in modern companies to exploit the potential for resource efficiency. The book is aimed at practitioners in companies and consulting firms, but is also suitable for the university sector as a practical introduction to the topic of resource efficiency. The materials used account for almost 43 percent of the costs of an average industrial company in Germany. Personnel costs, on the other hand, are only 22 percent, while energy costs are as low as 2 percent. If a company wants to save costs, above all it must consider the use of materials and produce in a resource-efficient manner. This simultaneously relieves the environment and reduces dependence on scarce raw materials. The implementation

of resource efficiency is not easy. There are indeed numerous starting points in production, often in process innovations or in product development. However, only a few companies publish their measures and savings potentials. In practice, this means that there are often no learning examples in practice, but some of them are explicitly listed in this work. As you can see, resource efficiency in production and products can also be seen as a success factor for many companies. In the project 100 Pioneers in Efficient Resource Management, committed companies from Baden-Wuerttemberg are showing their solutions. The project was carried out by a competent team from the Pforzheim University and the State Agency for Environmental Technology. Leading trade associations in Baden-Württemberg have supported it.

which activities may be designed to integrate these three directly linked paths. It is an experience-derived and evidence-based analysis of how sustainable development impacts the transformation of the economy and how the business environment influences economic transformation in the light of the sustainable development principles. The book addresses the current challenges and shows how the economy can be transformed further in an organic way that meets the needs of society and the environment, through the use of digital technologies. The multidisciplinary approach to sustainability transformation is one of the core strengths of the book, as it emphasises the need for a holistic approach to the functioning of sustainable development ideas at the micro- and macro-levels. The authors present a fresh perspective, particularly around the regulations stimulating the sustainable development of enterprises, tax systems, and the allocation of

capital. Moreover, the book brings together and makes available the results of the latest research on the subject, using a vast amount of primary evidence and both quantitative and qualitative methodology. The authors' insights go beyond the obvious effects of economic transformation and call attention to ways in which smart technology and digitalisation may help to achieve the Sustainable Development Goals. The book is directed first and foremost towards academics, researchers and students, but also professionals, who would like to expand their knowledge of sustainable development from a scientific perspective.

**Corporate Boards in Law and Practice** - Paul Davies  
2013-11-28

Corporate boards play a central role in corporate governance and are thus regulated in the corporate law and corporate governance codes of all industrialized countries. Yet while there is a common core of rules on the boards considerable differences remain. These differences depend partly on shareholder structure, partly on historical, political and social developments and especially employee representation on the board. More recently, in particular with the rise of the international corporate governance code movement, there is a clear tendency towards convergence, at least in terms of the formal provisions of the codes. This book analyses the corporate boards, their regulation in law and codes and their actual

It offers the most up to date practical and analytical information on boards in Europe by leading company law experts. The issues addressed include: board structure, composition and functioning (one tier v. two tier, independent directors, expertise and diversity, separating the chair and the CEO functions, information streams, committees, voting and employee representation); enforcement by liability rules (in particular conflicts of interest), incentive structures (remuneration) and shareholder activism.

software migration, and other real industry challenges The ISA (International Society of Automation) standards 88 and 95, respectively [ ] are manufacturing procedural and operational standards established in the late 1990s and periodically updated by the governing bodies responsible for them--the ISA and WBF (World Batch Forum). The two standards and their components set up protocols and uniform specifications for batch control systems, including types of control equipment, design of control systems and interpretation of batch control data, as well as integrating such processes with the general manufacturing business enterprise. In Volume 2 of the series, the ISA 88 is explained in terms of use in batch processing or semi-batch processing, both when setting up a new ISA 88 system or retrofitting an existing system with ISA 88 "recipes." The ISA 88 and 95 standards have been around (and periodically updated) for nearly 20 years now, but little really helpful

has been published on how to put those standards into use, particularly from a pragmatic, real-life experience point of view. The four books in this new series will do exactly that: explain to the manufacturing engineer, the controls engineers, and the industrial planner and manager alike how these standards translate into improved batch and continuous process operations--and ultimately how those operations can be integrated and automated into the general business operations (accounting, inventory, customer relations, product development) of the manufacturing concern.

### **The Art of Intelligence** -

Henry A. Crumpton 2013-04-30  
“A lively account . . . combines the derring-do of old-fashioned spycraft with thoughtful meditations on the future of warfare and intelligence work. It deserves to be read.” —The Washington Post “Offer[s] an exceptionally deep glimpse into the CIA’s counterterrorism operations in the last decade of the twentieth century.”

—Harper’s A legendary CIA spy and counterterrorism expert tells the spellbinding story of his high-risk, action-packed career Revelatory and groundbreaking, *The Art of Intelligence* will change the way people view the CIA, domestic and foreign intelligence, and international terrorism. Henry A. “Hank” Crumpton, a twenty-four-year veteran of the CIA’s Clandestine Service, offers a thrilling account that delivers profound lessons about what it means to serve as an honorable spy. From CIA recruiting missions in Africa to pioneering new programs like the UAV

Predator, from running post-9/11 missions in Afghanistan to heading up all clandestine CIA operations in the United States, Crumpton chronicles his role—in the battlefield and in the Oval Office—in transforming the way America wages war and sheds light on issues of domestic espionage.

### **Sustainability and Life Cycle Assessment in Industrial Biotechnology** - Magnus Fröhling 2020-06-16

This book reviews the assessment of industrial biotechnology products and processes from a sustainable perspective. Industrial Biotechnology is a comparably young field which comes along with high expectations with

regard to sustainability issues. These stem from the promise of reducing greenhouse gas emissions and replacing fossil resources in the near or later future and using green technology, i.e. more environmentally friendly technologies. The intended economic, ecological and social benefits, however, need to be proven, resulting in a variety of challenges, both from a methodological and application point of view. In this book, specific assessment and application topics of industrial biotechnology are addressed, highlighting challenges and solutions for both developers and users of assessment methods. In twelve chapters, experts in their particular fields define the scope, characterize industrial biotechnology and show in their contributions the state of the art, challenges and prospects of assessing industrial biotechnology products and processes. The chapter 'Societal and Ethical Aspects of Industrial Biotechnology' of this book is
