Handbook of International Economics - Gita Gopinath
2014-02-22

What conclusions can be drawn from recent advances in international trade and international macroeconomics? New datasets, theoretical models, and empirical studies have resulted in fresh questions about the world trade and payment system. These chapters--six on trade and six on international macroeconomics--reveal the richness that researchers have uncovered in recent years. The chapters on foreign trade present, among other subjects, new integrated multisector analytical frameworks, the use of gravity equations for the estimation of trade flows, the role of domestic institutions in shaping comparative advantage, and international trade agreements. On international macroeconomics, chapters explore the relation between exchange rates and other macroeconomic variables; risk sharing, allocation of capital across countries, and current account dynamics; and sovereign debt and financial crises. By addressing new issues while

enabling deeper and sharper analyses of old issues, this volume makes a significant contribution to our understanding of the global economy. Systematically illuminates and interprets recent developments in research on international trade and international macroeconomics Focuses on newly developing questions and opportunities for future research Presents multiple perspectives on ways to understand the global economy

Congressional Trade Votes -

Robert E. Baldwin 2000

The unwillingness of the US House of Representatives to renew fast-track authority in 1997 and 1998 means that further trade liberalization for the United States is likely to slow down or grind to a halt, since negotiators elsewhere know that any agreements reached could be modified by the US Congress. This political impasse raises several overarching questions: Does the status of fast track represent a temporary or a permanent setback in the

postwar trend toward freer trade? Is it due simply to lax efforts in mobilizing groups that support trade liberalization, or is US trade policy becoming more protectionist? More generally, what were the most important economic and social factors shaping congressional voting on trade legislation in the 1990s? How do these factors differ for the various trade bills Congress considered over this period? Baldwin and Magee attempt to answer these questions by analyzing three key trade bills: NAFTA in 1993; the legislation implementing the Uruguay Round agreements in 1994; and the House bill seeking to renew fast-track authority in 1998. The authors provide a brief legislative history of each, and then outline a conceptual framework for their analysis. Focusing on district and state economic conditions, ideological leanings, and campaign contributions, they find both predictable and surprising relationships in the data.

Trade in Health Services in South Asia - Arindam Banik
2020-02-12

This book observes that an in-depth study exclusively focusing on health service trade not only strengthens the overall services trade capacity of the South Asian region, but also promotes global as well as regional trade. There is a dearth of analytical research on estimating barriers to trade in health services, particularly in the context of South Asia, and as such, this book assesses the potential benefits and economic costs of barriers to trade in health services in select South Asian economies. It also analyzes the impact of liberalization and regulatory reforms on economic welfare. It broadly addresses issues relating to trade in health

services, the GATS (General Agreement on Trade in Services), such as: Why are the current levels of trade in health services low? How will the GATS legally affect a country's health policy? What effect might liberalization have on national health systems? And what are the likely benefits of greater trade in health services? It also provides specific answers to the following questions: Does the substantial role of the government in health – as health service provider, financial supporter, regulator and promoter – have implications for the treatment of the sector under the GATS? What is the impact of liberalization of international trade in health services on the quality and availability of health services in developing SAARC countries? Given the importance of consumption abroad for trade in health services, and the gradual opening of health markets through Modes 1 and 3 (cross-border supply and commercial presence), how can problems

associated with trade in these Modes be prevented? And are these problems sufficiently addressed by GATS disciplines? Answers to these questions will be of great use to researchers, policy makers as well as practitioners and NGOs of South Asia.

Lecture Notes in International Trade: An Undergraduate Course -

Priyaranjan Jha 2020-09-11

This book provides a comprehensive discussion of the economics of International Trade. Key questions related to why countries trade, how they gain from trade, and how international trade can produce winners and losers are answered. The last of these questions is related to the connection of trade to inequality in the distribution of income. The book uses both theoretical models and empirical evidence to answer these questions. It also provides a discussion of the

economics of labor migration and international capital mobility. The book also provides a detailed discussion of the welfare implications of various trade policy instruments such as tariffs, quotas, export subsidies etc. This is followed by a discussion of the process of actual policymaking in democratic societies which goes into the realm of political economy. The focus here is on the political economy of trade policy. It also provides a discussion of the economics of preferential trading agreements and a history of multilateral trading agreements under the aegis of GATT (General Agreement on Tariffs and Trade) and its evolution into the World Trade Organization (WTO).
