The Indian population has used Ayurvedic herbs for centuries, but now modern scientific work has led to recognition and acceptance at a global level. The major cause of the increased popularity of Ayurvedic medicine stems from recent scientific validation and its potential in lifestyle management. This growth in research in India and worldwide has created the need for a resource covering the scientific development of Ayurvedic herbs for practice during the postclassical period. The Modern Ayurveda: Milestones Beyond the Classical Age explores a host of topics essential to understanding the surge of scientific work now being conducted on this ancient practice. A one-point source for the modern explorer attempting to appreciate the transformation of Ayurveda from an empirical to a rationalist understanding, the book enumerates more than 400 Ayurvedic herbs with compiled information including their botanical name, common Ayurvedic name and family, their attributes, chemical constituents, phytochemical markers, pharmacological actions, and their interactions and toxicity. It explores current research methodologies for the evaluation of efficacy and safety of herbal medicine and discusses the contemporary international regulatory status of herbal drugs. Ayurvedic medicine can be better understood and utilized through the application of modern scientific analytical tools for standardization, modern pharmacological tools for safety and efficacy evaluation, and the application of biotechnology to elicit the mechanism of drug actions. Bringing Ayurveda into the 21st century, this volume will inform further progress and open new doors to treatment.

*Circulation and Governance of Asian Medicine* - Céline Coderey 2019-09-25

This book unpacks the organized sets of practices that govern contemporary Asian medicine, from production of medications in the lab to their circulation within circuits and networks of all kinds, and examines the plurality of actors involved in such governance. Chapters analyze the process of industrialization and commercialization of Asian medicine and the ways in which the expansion of the market in Asian medicines has contributed to the inscription of products within a large system of governance, greatly dominated by global actors and the biomedical hegemony. At the same time, the contributors argue that local actors continue to play a major role in reshaping the regulations and their implementation, thus complexifying the trajectory of the remedies and their natures. Examining in particular the plurality of actors involved in governance and circulation, and the converging or conflicting logics actors follow in regard to negotiations and tensions that arise, the book brings a unique multi-layered contribution to the study of governance and circulation of Asian medicines, offering further proof of their fluidity and resilience. Filling a significant gap in the market by addressing circulation and governance of Asian medicines in Asian countries, including Bangladesh, Myanmar, and Singapore, this book will be of interest to students and scholars in the field of Asian studies, Asian culture and society, global health, Asian medicine, and medical anthropology.

*Culture and the Environment in the Himalaya* - Arjun Guneratne 2009-12-24

The chapters in this book analyse the symbolic schema that shape human-environment relations, whether that of scientists studying the Himalayan environment, public officials crafting policy about it, or people making a living from their engagement with it, and the way that natural phenomena themselves shape human perception of the world. A new approach to the study of the environment in South Asia, this book introduces the new thinking in environmental anthropology and geography into the study of the Himalaya and uses Himalayan ethnography to interrogate and critique contemporary theorizing about the environment.

**Safety Concerns for Herbal Drugs** - Divya Vohora 2015-12-01

Are herbal drugs totally devoid of adverse effects when used alone, as herbal formulations, or in concurrent use with modern medicines? Safety Concerns for Herbal Drugs examines that question and others like it to give you the information you need to judge for yourself the balance between the risks and benefits associated with the therapeutic use of medicinal plants. It stands out from other books by directing your attention to the aspects of safety and toxicity. The authors venture into the relatively unexplored (or

deliberately hidden) side of the picture. They present a survey of approximately 1500 medicinal plants and herbal products, 59 global (from 27 countries) and 75 Indian examples of toxic and adverse effects and drug interactions. Additionally, they present the current status of regulatory laws and their enforcement in 73 countries to support their contention that such laws and enforcement are inadequate, and that herbal drugs are unscientifically being promoted as totally safe. To give you the full picture, the authors go on to examine such issues as danger from large-scale misuse and abuse, self-prescription, substitution, adulteration, concurrent use with modern medicines, hazardous but avoidable drug interactions, risk groups, and present status of drug regulations.
