Fundamentals of International Aviation -
Suzanne K. Kearns 2018-03-19

International aviation is a massive and complex industry that is crucial to our global economy and way of life. Fundamentals of International Aviation, designed for the next generation of aviation professionals, flips the traditional approach to aviation education. Instead of focusing on one career in one country, it has been designed to introduce the aviation industry on a global scale with a broad view of all the interconnected professional groups. Therefore, this is an appropriate introductory book for any aviation career (including aviation regulators, maintenance engineers, pilots, flight attendants, airline managers, dispatchers, air traffic controllers, and airport managers among many others). Each chapter of this text introduces a different cross-section of the industry, from air law to operations, security to remotely-piloted aircraft (drones). A variety of learning tools are built into each section, including case studies that describe an aviation accident related to the content of each chapter. This book provides a foundation of aviation industry awareness that will support the next generation as they choose a career path that best aligns with their interests and ambitions. It also offers current professionals an enriched understanding of the practices and challenges between the many interconnected professional groups that make up the rich fabric of international aviation. Online slides and a test bank are available as an eResource for this book, which can be found at

Cessna Citation Jets - Geza Szurovy 2000-03

Polished mahogany, Corinthian leather, and cutting-edge technology are standard amenities in the world of business jets. Since 1969, no line of "bizjets" has ferried more captains of industry and celebrities in style and safety than Cessna's bestselling Citation series. This all-color history of Citations begins with the company's entry into the corporate jet market and traces the evolution of the series through the nearly supersonic Citation 10 (Mach 0.92). Air-to-air photos, detail shots of interiors, cockpit views, and production line images examine all Citation models.
