Service Delivery Through Information Systems in TANROADS: Challenges and Possibilities in Dar Es Salaam and Mwanza - Rickson Joseph 2013-05-17

This study intends to investigate the status of TANROADS Information Systems and the services offered in Dar-es-salaam and Mwanza. A descriptive design is used as a tool for gathering relevant information to meet the study objectives. Hence, the study critically examines the range of services and the gap experienced in service provision. The study deployed a random sampling procedure to arrive at its findings, i.e., achieving a representative sample from the targeted population from which the data were collected and analysing it by applying descriptive statistics. The findings are presented as figures and in percentages highlighting the relevance of data to TANROADS information systems. The research has revealed critical factors which would affect the implementation

and utilization of TANROADS information systems. Recommendations related to enhance the current status of TANROADS Information systems are presented: adoption of ERP software, in order to co-ordinate the available functional systems, developing ICT infrastructures and training the TANROADS employees and the TANROADS Information System users.

'Strategic Information Management' has been completely up-dated to reflect the rapid changes in IT and the business environment since the publication of the second edition. Half of the readings in the book have been replaced to address current issues and the latest thinking in Information Management. Capture and Reuse of Project Knowledge in Construction - Hai Chen Tan 2009-12-09

An organisation's competitive advantage lies in the knowledge of its employees and the organisation's ability to harness that knowledge to meet business objectives. Knowledge management is recognised in the construction industry as a potential tool for providing organisational benefits, but for a number of reasons - particularly the project based nature of construction, where teams are transient, multidisciplinary and often from different organisations - implementation has been only marginally successful. *Capture and Reuse of Project Knowledge in Construction* describes a methodology for the 'live' capture of reusable project knowledge that reflects both the organisational and human dimensions of knowledge capture and reuse, as well as exploiting the benefits of technology. This methodology was developed in response to the shortcomings of current practices in managing project knowledge, the benefits offered by capturing and sharing knowledge immediately after it is generated, and the organisational benefit of reusing knowledge within a project based environment.

Managing knowledge - Katrin Lenz 2002-02-19

Inhaltsangabe: Abstract: In an economy where the only certainty is uncertainty, the sure source of lasting competitive advantage is knowledge. Peter Drucker (1953) Companies like Microsoft, Netscape, Coca-Cola and Yahoo can be found

under the top U.S. companies with the highest market values in 1999. The market value represents the measure of value that the investors and markets associate with the company. However, these companies are not valued for their tangible assets (buildings, inventory, etc.), they are valued for something which cannot be shown on a balance sheet: their intangibles. These include brand recognition, Patents, customer loyalty, innovative business ideas, past achievements, etc. These companies are valued for the knowledge they possess. However, knowledge is of little value, if it cannot be found when needed. Therefore, a successful knowledge management concept is of crucial importance for these companies. The knowledge management market is growing rapidly and it will continue to advance over the next years. Knowledge management is still a relatively young field with new concepts emerging constantly. Most knowledge management initiatives have focused entirely on changes in tools and technologies, such as intranets and Lotus Notes. But knowledge management is more complex: it covers everything the company does to make knowledge available to everyone. The twenty-first century gives companies the tools and connectivity to easily obtain, share, and act on information quickly. Knowledge management uses these possibilities and recent studies showed that companies gained a competitive advantage by implementing it. According to Accenture research, a well implemented knowledge management process can improve employee productivity by an average of 60%. Often, knowledge management is seen as storing documents in a database, thus hoping to enhance knowledge sharing through the implementation of technology. But to successfully apply knowledge management, companies need to implement a process of motivating and inciting people to share information. The old saying Knowledge is power is still popular. The people who are hoarding their knowledge believe that it makes them irreplaceable. However, real power does not come from knowledge kept, but from knowledge shared. People are expected to cooperate, to be open, to participate within the new economy, but resistance can be expected. Obviously, knowledge management is a combination of [...]
