Indomitable - W. C. Bauers 2016-07-26
"Lieutenant Paen barely survived her last encounter with the Lusitanian Empire. She's returned home to heal. But the nightmares won't stop. And she's got a newly reconstituted unit of green marines to whip into shape before they deploy. If the enemies of the RAW don't kill them first, she just might do the job herself"--Dust jacket flap.

Governance, Natural Resources and Post-Conflict Peacebuilding - Carl Bruch 2016-04-07

When the guns are silenced, those who have survived armed conflict need food, water, shelter, the means to earn a living, and the promise of safety and a return to civil order. Meeting these needs while sustaining peace requires more than simply having governmental structures in place; it requires good governance. Natural resources are essential to sustaining people and peace in post-conflict countries, but governance failures often jeopardize such efforts. This book examines the theory, practice, and often surprising realities of post-conflict governance, natural resource management, and peacebuilding in fifty conflict-affected countries and territories. It includes thirty-nine chapters written by more than seventy researchers, diplomats, military personnel, and practitioners

from governmental, intergovernmental, and nongovernmental organizations. The book highlights the mutually reinforcing relationship between natural resource management and good governance. Natural resource management is crucial to rebuilding governance and the rule of law, combating corruption, improving transparency and accountability, engaging disenfranchised populations, and building confidence after conflict. At the same time, good governance is essential for ensuring that natural resource management can meet immediate needs for post-conflict stability and development, while simultaneously laying the foundation for a sustainable peace. Drawing on analyses of the close relationship between governance and natural resource management, the book explores lessons from past conflicts and ongoing reconstruction efforts; illustrates how those lessons may be applied to the formulation and implementation of more effective governance initiatives; and presents an

emerging theoretical and practical framework for policy makers, researchers, practitioners, and students. Governance, Natural Resources, and Post-Conflict Peacebuilding is part of a global initiative to identify and analyze lessons in post-conflict peacebuilding and natural resource management. The project has generated six books of case studies and analyses, with contributions from practitioners, policy makers, and researchers. Other books in this series address high-value resources, land, water, livelihoods, and assessing and restoring natural resources.

QBism - Hans Christian von Baeyer 2016-10-03
Short for Quantum Bayesianism, QBism adapts conventional features of quantum mechanics in light of a revised understanding of probability. Using commonsense language, without the equations or weirdness of conventional quantum theory, Hans Christian von Baeyer clarifies the meaning of quantum mechanics and suggests a new approach to general physics.

Organizational Perspectives on Environmental Migration - Kerstin Rosenow-Williams 2015-10-16

Over the past decade, international organizations (IOs) and non-governmental organizations (NGOs) have increasingly focused their efforts on the plight of environmental migrants in both industrialized and developing countries. However, to date very few studies have analysed the influence and rhetoric of advocacy groups in the debates on environmental migration. *Organizational Perspectives on Environmental Migration* fills this lacuna by drawing together and examining the related themes of climate change and environmental degradation, migration and organizational studies to provide a fresh perspective on their increasing relevance. In order to assess the role of IOs and NGOs in the environmental migration discourse and to understand their interaction and their ways of addressing the topic, the book contains a wide-

range of contributions covering the perspectives of organizational sociologists, political scientists, anthropologists, geographers, lawyers and practitioners. The chapters are organized thematically around the perspectives of key actors in the area of environmental migration, including IOs, courts and advocacy groups. The geographically diverse and interdisciplinary range of contributions makes this volume an essential foundational text for organizational responses to environmental migration. This volume will be of great interest to students and scholars of migration studies, international relations, organizational sociology, refugee law and policy, and development studies.

Small Implants in Knee Reconstruction -

Norberto Confalonieri 2013-04-01

Minimally invasive joint replacement has become one of the hottest topics in the orthopedic world. In the case of the knee, however, this concept has been widely misunderstood. All too frequently it is taken to

mean keyhole surgery in which traditional components are implanted with a shorter surgical time. Such an approach in fact has few benefits and various possible dangers. In this book, international experts discuss truly minimally invasive knee reconstruction techniques that involve tissue-sparing surgery and small implants and permit preservation of both the anterior and the posterior cruciate ligament. These techniques have the key advantage of respecting the physiological joint biomechanics. They also entail minimal removal of bone tissue from the tibia and only a small skin incision that avoids damage to the extensor apparatus. All of the most innovative techniques used in uni- and bicompartamental knee reconstruction are covered in detail, including computer-assisted procedures. Long-term results are reported, and pitfalls, highlighted. The reader will learn how, with careful selection of patients and rigorous surgical technique, compartmental reconstruction offers a valid

alternative to total knee replacement.
