The Derivative Action in Asia - Dan W. Puchniak
2012-06-28

This in-depth comparative examination of the derivative action in Asia provides a framework for analysing its function, history and practical application and examines in detail how derivative actions law works in practice in seven important Asian jurisdictions (China, Hong Kong, India, Japan, Korea, Taiwan and Singapore). These case studies allow an evaluation of a number of the leading Western comparative corporate law and governance theories which have come to define the field over the last decade. By debunking some of these critically important theories, this book lays the foundation for an accurate understanding of the derivative action in Asia and a re-examination of the regulation of the derivative action around the world.

Treatment of the Neurologically Impaired Adult With the present book, acclaimed international Bobath instructor and therapist Bente Gjelsvik offers an evidence-based practice-oriented road map to the assessment and treatment of patients with lesions of the central nervous system. Consisting of 238 pages of accessible text supported by 240 illustrations (mostly photographs of patients in therapy), this work is the ideal clinical guide for physical and occupational therapists, for students and practitioners working with neurologically impaired adults, and for Bobath instructors as well as trainers in physiotherapy in general. Moral Blindness - Zygmunt Bauman 2013-04-24

Evil is not confined to war or to circumstances in which people are acting under extreme duress. Today it more frequently reveals itself in the everyday insensitivity to the suffering of others, in the inability or refusal to understand them and in the casual turning away of one's ethical gaze. Evil and moral blindness lurk in what we take as normality and in the triviality and banality of everyday life, and not just in the

abnormal and exceptional cases. The distinctive kind of moral blindness that characterizes our societies is brilliantly analysed by Zygmunt Bauman and Leonidas Donskis through the concept of *adiaphora*: the placing of certain acts or categories of human beings outside of the universe of moral obligations and evaluations. *Adiaphora* implies an attitude of indifference to what is happening in the world – a moral numbness. In a life where rhythms are dictated by ratings wars and box-office returns, where people are preoccupied with the latest gadgets and forms of gossip, in our 'hurried life' where attention rarely has time to settle on any issue of importance, we are at serious risk of losing our sensitivity to the plight of the other. Only celebrities or media stars can expect to be noticed in a society stuffed with sensational, valueless information. This probing inquiry into the fate of our moral sensibilities will be of great interest to anyone concerned with the most profound changes that are silently shaping the lives of everyone in our contemporary liquid-modern world.

Managing the Risks of Organizational Accidents - James Reason 2016-01-29

Major accidents are rare events due to the many barriers, safeguards and defences developed by modern technologies. But they continue to happen with saddening regularity and their human and financial consequences are all too often unacceptably catastrophic. One of the greatest challenges we face is to develop more effective ways of both understanding and limiting their occurrence. This lucid book presents a set of common principles to further

our knowledge of the causes of major accidents in a wide variety of high-technology systems. It also describes tools and techniques for managing the risks of such organizational accidents that go beyond those currently available to system managers and safety professionals. James Reason deals comprehensively with the prevention of major accidents arising from human and organizational causes. He argues that the same general principles and management techniques are appropriate for many different domains. These include banks and insurance companies just as much as nuclear power plants, oil exploration and production companies, chemical process installations and air, sea and rail transport. Its unique combination of principles and practicalities make this seminal book essential reading for all whose daily business is to manage, audit and regulate hazardous technologies of all kinds. It is relevant to those concerned with understanding and controlling human and organizational factors and will also interest academic readers and those working in industrial and government agencies.

Patient Engagement - Guendalina Graffigna

2016-01-01

Patient engagement should be envisaged as a key priority today to innovate healthcare services delivery and to make it more effective and sustainable. The experience of engagement is a key qualifier of the exchange between the demand (i.e. citizens/patients) and the supply process of healthcare services. To understand and detect the strategic levers that sustain a good quality of patients' engagement may thus allow not only to improve clinical outcomes, but also to increase patients' satisfaction and to reduce the organizational costs of the delivery of services. By assuming a relational marketing perspective, the book offers practical insights about the developmental process of patients' engagement, by suggesting concrete tools for assessing the levels of patients' engagement and strategies to sustain it. Crucial resources to implement these strategies are also the new technologies that should be (1) implemented according to precise guidelines and (2) designed according to a user-centered design process. Furthermore, the book describes possible fields of patients' engagement application by describing the best practices and experiences matured in different fields
