*Integrative Medicine and the Health of the Public* - Institute of Medicine 2009-10-16

The last century witnessed dramatic changes in the practice of health care, and coming decades promise advances that were not imaginable even in the relatively recent past. Science and technology continue to offer new insights into disease pathways and treatments, as well as mechanisms of protecting health and preventing disease. Genomics and

proteomics are bringing personalized risk assessment, prevention, and treatment options within reach; health information technology is expediting the collection and analysis of large amounts of data that can lead to improved care; and many disciplines are contributing to a broadening understanding of the complex interplay among biology, environment, behavior, and socioeconomic factors that shape health and wellness. On February 25 - 27, 2009, the Institute of Medicine (IOM) convened the Summit on Integrative Medicine and the Health of the Public in Washington, DC. The summit brought together more than 600 scientists, academic leaders, policy experts, health practitioners, advocates, and other participants from many disciplines to examine the practice of integrative medicine, its scientific basis, and its potential for improving health. This publication summarizes the background, presentations, and discussions that occurred during the summit. Foundations of Population Health for Community/Public Health Nursing - MARCIA. Written by the leading practitioners and researchers in the field of health promotion, Health Promotion in Practice is a key text and reference for students, faculty, researchers, and practitioners. "Finally, a signature book in which practitioners of health promotion will find relevant guidance for their work. Sherri Sheinfeld Gorin and Joan Arnold have compiled an outstanding cast of savvy experts whose collective effort has resulted in a stunning breadth of coverage. Whether you are a practitioner or a student preparing for practice, this book will help you to bridge the gap between theory and practice-driven empiricism." —John P. Allegrante, professor of health education, Teachers College, and Mailman School of Public Health, Columbia University "The models of health promotion around which Health Promotion in Practice is built have a sound basis in current understanding of human development, the impact of community and social systems, and stages of growth, development, and aging. This handbook can provide both experienced health professionals and students beginning to develop practice patterns the content and structure to interactions that are truly promoting of health." —Kristine M. Gebbie, Dr.P.H., R.N., Columbia University School of Nursing **Accelerating Progress in Obesity Prevention** - Institute of Medicine 2012-05-30

One-third of adults are now obese, and children's obesity rates have climbed from 5 to 17 percent in the past 30 years. The causes of the nation's obesity epidemic are multi-factorial, having much more to do with the absence of sidewalks and the limited availability of healthy and affordable foods than a lack of personal responsibility. The broad societal changes that are needed to prevent obesity will inevitably affect activity and eating environments and settings for all ages. Many aspects of the obesity problem have been identified and discussed; however, there has not been complete agreement on what needs to be done to accelerate progress. Accelerating Progress in Obesity Prevention reviews previous studies and their recommendations and presents five key recommendations to accelerate meaningful change on a societal level during the next decade. The report suggests recommendations and strategies that, independently, can accelerate progress, but urges a

systems approach of many strategies working in concert to maximize progress in accelerating obesity prevention. The recommendations in Accelerating Progress in Obesity Prevention include major reforms in access to and opportunities for physical activity; widespread reductions in the availability of unhealthy foods and beverages and increases in access to healthier options at affordable, competitive prices; an overhaul of the messages that surround Americans through marketing and education with respect to physical activity and food consumption; expansion of the obesity prevention support structure provided by health care providers, insurers, and employers; and schools as a major national focal point for obesity prevention. The report calls on all individuals, organizations, agencies, and sectors that do or can influence physical activity and nutrition environments to assess and begin to act on their potential roles as leaders in obesity prevention.

*Noncommunicable Diseases in Saudi Arabia* - Ada Alqunaibet 2021-12-06

Saudi Arabia is at an early stage of its demographic transition to an older population, and so it has an opportunity to prepare early for a rising noncommunicable disease (NCD) epidemic. NCDs, such as cancers, cardiovascular diseases, diabetes, and chronic respiratory diseases and their associated behavioral risk factors—tobacco use, unhealthy diet, and physical inactivity—are an increasing economic and public health challenge. An aging population is expected to significantly increase the prevalence of NCDs and the related demand for costlier health care

services. Interventions and reforms to prevent NCDs, and to minimize current and future treatment costs, are needed now, particularly if Saudi Arabia is to achieve the Vision 2030 goal of increasing life expectancy from 75 years in 2021 to 80 years in 2030. To support strategic planning efforts, *Noncommunicable Diseases in Saudi Arabia: Toward Effective Interventions for Prevention* assesses the latest evidence on the prevalence and risk factors; explores the health and economic burden of NCDs, as well as their impact on human capital; and identifies key gaps in prevention efforts and ways to address these gaps. The book discusses the need for a national master plan for NCD prevention—one that is selective and targeted, with a particular focus on improving the implementation of cost-effective interventions and achieving results. To be successful, the national master plan will need to take into account the roles of the different stakeholders and their likely responsibilities in implementation. The book will be of interest to all those who work on NCDs in Saudi Arabia and beyond.

**Global Applications of Culturally Competent Health Care:**

**Guidelines for Practice** - Marilyn "Marty" Douglas 2018-07-02

This book is unique in its global approach to applying the Guidelines for Culturally Competent Nursing Practice that were recently endorsed by the International Council of Nurses (ICN) and distributed to all of its 130 national nursing associations. The purpose of this book is to illustrate how these guidelines can be put into clinical practice and to show how practitioners from different countries with diverse populations can implement them. The first chapter provides the conceptual basis for Culturally Competent Health Care and describes how the guidelines were developed. Each of the next 10 sections presents a chapter describing a specific guideline followed by three or four chapters with detailed case studies to illustrate how the guideline was implemented in a particular cultural setting. All case studies follow a similar format and are written by international authors with clinical expertise and work experience in the culture being presented. This book will be useful for advanced practice nurses, healthcare students, clinicians, administrators, educators, researchers, and those who provide community health or population-based care.

This Open Access volume provides in-depth analysis of the wide range of ethical issues associated with drug-resistant infectious diseases.

Antimicrobial resistance (AMR) is widely recognized to be one of the greatest threats to global public health in coming decades; and it has thus become a major topic of discussion among leading bioethicists and scholars from related disciplines including economics, epidemiology, law, and political theory. Topics covered in this volume include responsible use of antimicrobials; control of multi-resistant hospital-acquired infections; privacy and data collection; antibiotic use in childhood and at the end of life; agricultural and veterinary sources of resistance; resistant HIV, tuberculosis, and malaria; mandatory treatment; and trade-offs between current and future generations. As the first book focused on ethical issues associated with drug resistance, it makes a timely contribution to debates regarding practice and policy that are of crucial importance to global public health in the 21st century.

This book provides a comprehensive, updated summary of research evidence on the effects of stressful working and employment conditions on workers' health, as based on one of the worldwide leading theoretical models, effort-reward imbalance. It offers three innovative features that are appealing for research as well as for policy. Firstly, it presents and discusses comparable research findings from different continents, in particular from Japan, China, and Latin America. Secondly, it extends the conceptual framework of research on this topic by analysing associations of work stress with health in a life course perspective, and by linking these associations to the macro-level of national labour and social

policies. Thirdly, the book helps to strengthen programs and policies that aim at promoting healthy work locally, nationally, and internationally, by providing solid facts on which such programs can be based.

*Improving Health in the Community* - Institute of Medicine 1997-05-21

How do communities protect and improve the health of their populations? Health care is part of the answer but so are environmental protections, social and educational services, adequate nutrition, and a host of other activities. With concern over funding constraints, making sure such activities are efficient and effective is becoming a high priority. *Improving Health in the Community* explains how population-based performance monitoring programs can help communities point their efforts in the right direction. Within a broad definition of community health, the committee addresses factors surrounding the implementation of performance monitoring and explores the "why" and "how to" of establishing mechanisms to monitor the performance of those who can influence community health. The book offers a policy framework, applies a multidimensional model of the determinants of health, and provides sets of prototype performance indicators for specific health issues. *Improving Health in the Community* presents an attainable vision of a process that can achieve community-wide health benefits.

**Early Child Development from Measurement to Action** - Mary E. Young 2007

Prosperity in the world today depends on societies' nurturing of young children. Quality care (stimulation, health, and nutrition) during ages 0 - 5 has a decisive and long-lasting impact on a person's development, ability to learn, and capacity to regulate emotions. Cognitive and noncognitive (social and emotional) skills, set early in life, determine later success. New research in neurobiology and the behavioral and social sciences is converging to enhance this understanding of early child development. Recently, researchers noted epigenetic effects in brain development - that is, the interaction of environment (early experiences) with genetics to shape brain structure and function - that with proper nurturing would enable people to have competence to create prosperous, sustainable, tolerant, nonviolent, and democratic communities. The World Bank recently hosted a symposium on the priority of early child development for economic growth and equity. The participants urged application of population - based tools and measures to assess the outcomes of children's early years and children's readiness for school. This approach, which shifts the focus from measures of disease, dysfunction, and mortality, is already yielding essential data for designing intervention programs, identifying children at risk, and leveraging policy and investment - to improve the possibilities for all children globally.
