The 'Made in Germany' Champion Brands -
Ugesh A. Joseph 2016-03-09

Germany's economic miracle is a widely-known
phenomenon, and the world-leading, innovative
products and services associated with German
companies are something that others seek to
imitate. In The 'Made in Germany' Champion

Brands, Ugesh A. Joseph provides an extensively researched, insightful look at over 200 of Germany's best brands to see what they stand for, what has made them what they are today, and what might be transferable. The way Germany is branded as a nation carries across into the branding of its companies and services, particularly the global superstar brands - truly world-class in size, performance and reputation. Just as important are the medium-sized and small enterprises, known as the 'Mittelstand'. These innovative and successful enterprises from a wide range of industries and product / service categories are amongst the World market leaders in their own niche and play a huge part in making Germany what it is today. The book also focuses on German industrial entrepreneurship and a selection of innovative and emergent stars. All these companies are supported and encouraged by a sophisticated infrastructure of facilitators, influencers and enhancers - the research, industry, trade and

standards organizations, the fairs and exhibitions and all the social and cultural factors that influence, enhance and add positive value to the country's image. Professionals or academics interested in business; entrepreneurship; branding and marketing; product or service development; international trade and business development policy, will find fascinating insights in this book; while those with an interest in Germany from emerging industrial economies will learn something of the secrets of German success.

Networking the World, 1794-2000 - Armand Mattelart 2000

In the age of satellites and the Internet, worldwide communication has become increasingly unified amid overblown claims about the redemptive possibilities of international networks. But this rhetoric is hardly new. As Armand Mattelart demonstrates in *Networking the World, 1794-2000*, globalization and its attendant hype have existed since road and rail were the fastest way to move

information. Mattelart plates contemporary global communication networks into historical context and shows that the networking of the world began much earlier than many assume, in the late eighteenth century. He argues that the internationalization of communication was spawned by such Enlightenment ideals as universalism and liberalism, and examines how the development of global communications has been inextricably linked to the industrial revolution, modern warfare, and the emergence of nationalism. Throughout, Mattelart eloquently argues that discourses of better living through globalization often mask projects of political, economic, and cultural domination.
