Marketing Aesthetics - Alex Simonson 1997-08-30

There is no way to mistake the ubiquitous trademarked Coca-Cola bottle, or the stylish ads for Absolut Vodka with any of their competitors. How have these companies created this irresistible appeal for their brands? How have they sustained a competitive edge through aesthetics? Bernd Schmitt and Alex Simonson, two leading experts in the emerging field of identity management, offer clear guidelines for harnessing a company's total aesthetic output -- its "look and feel" -- to provide a vital competitive advantage. Going beyond standard traditional approaches on branding, this fascinating book is the first to combine branding, identity, and image and to show how aesthetics can be managed through logos, brochures, packages, and advertisements, as well as sounds, scents, and lighting, to sell "the memorable experience." The authors explore what makes a corporate or brand identity irresistible, what styles and themes are crucial for different contexts, and what meanings certain visual symbols convey. Any person in any organization in any industry can benefit from employing the tools of "marketing aesthetics." Schmitt and Simonson

describe how a firm can use these tools strategically to create a variety of sensory experiences that will (1) ensure customer satisfaction and loyalty; (2) sustain lasting customer impressions about a brand's or organization's special personality; (3) permit premium pricing; (4) provide legal "trade dress" protection from competitive attacks; (5) lower costs and raise productivity; and (6) most importantly, create irresistible appeal. The authors show how to manage identity globally and how to develop aesthetically pleasing retail spaces and environments. They also address the newly emergent topic of how to manage corporate and brand identity on the Internet. Supporting their thesis with numerous real-world success stories such as Absolut Vodka, Nike, the Gap, Cathay Pacific Airlines, Starbucks, the New Beetle Website, and Lego, the authors explain how actual companies have developed, refined, and maintained distinct corporate identities that set them apart from competitors.

Modelling Urban Development with Geographical Information Systems and Cellular Automata - Yan Liu 2008-12-10

Urban development and migration from rural to urban areas are impacting prime agricultural land and natural landscapes, particularly in the less developed countries. These phenomena will persist and require serious study by those monitoring global environmental change. To address this need, various models have been devised to analyze urbanization and the physical, socioeconomic, and institutional factors impacting urban development. The most promising and rapidly developing of these paradigms take advantage of new Geographical

Information System (GIS) technology. *Modelling Urban Development with Geographical Information Systems and Cellular Automata* presents one such cutting-edge model that is more than just predictive. It describes how the model simulates the urbanization process, and it provides theoretical context to promote understanding. Starting with a practical overview of the modelling techniques used in urban development research, the author focuses on the cellular automata model and its greatest strength – the incorporation of fuzzy set and fuzzy logic approaches through which urban development can be viewed as a spatially and temporally continuous process. *Real-Life Application to Develop Future Planning Methods* The text describes a landmark study underway, in which the fuzzy constrained cellular automata model has been implemented in a GIS environment to simulate urban development in Sydney, Australia. Featuring a survey of associated research and a geographical database for the Sydney simulation, this book answers many general "what if" questions for urban planners and details a new approach that they can adapt to their own testing and evaluation needs. This modeling method will provide researchers and planners with the means to not just predict population trends, but to better prepare for their consequences.

bookdown - Yihui Xie 2016-12-12

bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily

for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

Contextual Teaching and Learning - Elaine B. Johnson 2002

Contextual teaching and learning (CTL) is a system for teaching that is grounded in brain research. Brain research indicates that we learn best when we see meaning in new tasks and material, and we discover meaning when we are able to connect new information with our existing knowledge and experiences. Students learn best, according to neuroscience, when they can connect the content of academic lessons with the context of their own daily lives. Johnson discusses the elements of the brain-compatible contextual teaching and learning system: making meaningful connections; investing school work with significance; self-regulated learning; collaboration; critical and creating thinking; nurturing the individual; reaching high standards; and using authentic assessment. Drawing on the practices of teachers in kindergarten through university, Johnson provides numerous examples of how to use each part of the CTL system.
