The Succulent Gardening Book - Dr Sandra White 2022-10-09

BASIC GROWING TECHNIQUES AND A DIRECTORY Succulent garden design is appropriate for warm, temperate, and even cold-season locations. In colder climates, it's not always possible to have a succulent garden outside, but you can grow them in containers. Learn a little about how to plan an outdoor succulent garden and bring some fun shapes and textures to your landscape. Succulents are generally drought-tolerant plants that have thick leaves where they store moisture. Although succulent plants are very tolerant of dry conditions, they do need water, especially during the growing season. Succulent garden design should consider the location, soil type, configuration, moisture level, and the types of plants. Some succulents are more drought tolerant than others. Do a little research on the wide variety of succulent shapes and sizes

before starting a succulent garden outside. For instance, cacti are succulents and hold water in their stems and pads. Other types of succulents are not spiny but have swollen leaves with a myriad of growth habits. There are spreading or drooping types, such as burro's tail; spiky, wide plants like agave; or tall, columned varieties such as old man's cactus. Plan the design with enough space for the plants to fill in as they grow. Growing a succulent garden outside starts with plant choices. If you are a novice, begin with plants that are easy and foolproof. Sedum and sempervivum are easy to grow and adaptable to bright, sunny locations or even slightly dappled areas. Whatever types of plants you choose, succulents need well-drained soil. They can thrive in cracks and crevasses, rockeries, and sandy or gritty soils. Succulents in cool-season areas will do best in containers that are brought indoors for the winter. Try some kalanchoe, aloe, echeveria, and aeonium. Have fun with the unique sizes, shapes, and textures of these plants. Use succulent outdoor plants as part of a xeriscape area of the garden, to conserve water and provide interest and color. When you've chosen your plants and are ready for planting, you will need to know how to plan an outdoor succulent garden. Choose a sunny location and plot the space you want to fill. Check the soil conditions and drainage by digging a hole at least 1 foot (0.5 m.) deep and filling it with water. If the water drains within a half-hour, the soil is sufficiently porous. If not, simply mix in 3 inches (7.5 cm.) of sand or another gritty material to increase the texture and drainage. Use taller specimens at the center of the area and spreading species at the edges or dotted among the larger plants as ground cover. Top the area with a layer of pebbles or small rocks to act as mulch. This will help prevent weeds and conserve moisture while allowing evaporation of excess water. Want to learn more? Plant and Grow Cactus - Davis Stetson 2022-05-08

One of the most misunderstood plant is the cactus. The cactus is often misunderstood as a small, spiky plant that can be neglected. However, it can make a beautiful landscape or potted plant. While most cactus plants do not appear to have any leaves, some of them actually do. We call these spines, which are highly modified leaves. These spines make the difference between a succulent and a cactus. A succulent with spines or thorns along its margins or leaf ends is not considered a cactus. All Cactus plants belong to the Cactaceae Family, which includes thousands of species. Two large groups of cacti are available as houseplants. These include desert cacti, and forest cacti. Both are well-known and can survive indoors with very little care. There are many varieties of cactus plants, but the majority are small- to medium-sized indoor varieties. Desert cacti are more traditional cacti. They have spines or hair, and can be found growing in balls, paddles, or obelisks. Forest cacti can be found in wooded areas. They range from tropical and subtropical forests to temperate forests. The Christmas Cactus is the most famous forest cactus. It's native to Brazil and has beautiful red, pink, purple and yellow blooms. Although both desert and forest cacti grow slowly and have beautiful blooms, they have different growth habits. You'll find this growing guide for cactus useful all year round, instructions on how to care

for cactus indoors and wonderful ideas on how to incorporate your plants into the interior styling of your spaces. Get this guide and discover the wonderful world of cactus plants
