Organic Chemistry - Robert Thornton Morrison 1998-06-01

Pharmaceutical Formulation - Geoffrey D Tovey 2018-06-25

Formulation is a key step in the drug design process, where the active drug is combined with other substances that maximise the therapeutic potential, safety and stability of the final medicinal product. Modern formulation science deals with biologics as well as small molecules. Regulatory and quality demands, in addition to advances in processing technologies, result in growing challenges as well as possibilities for the field. *Pharmaceutical Formulation* provides an up to date source of information for all who wish to understand the principles and practice of formulation in the drug industry. The book provides an understanding of the links between formulation theory and the practicalities of processing in a commercial environment, giving researchers the knowledge to produce effective pharmaceutical products that can be approved and manufactured. The first chapters introduce readers to different dosage forms, including oral liquid products, topical products and solid dosage

forms such as tablets and capsules. Subsequent chapters cover pharmaceutical coatings, controlled release drug delivery and dosage forms designed specifically for paediatric and geriatric patients. The final chapter provides an introduction to the vital role intellectual property plays in drug development. Covering modern processing methods and recent changes in the regulatory and quality demands of the industry, *Pharmaceutical Formulation* is an essential, up to date resource for students and researchers working in academia and in the pharmaceutical industry.

PHYSICAL PHARMACEUTICS. - R. MANAVLAN 2015

Advanced Pharmacology - Bikash Medhi 2019-12-02

"Advanced Pharmacology" aimed to deliver such topics of drugs which are very important to be know by any healthcare professional, but found rarely in any books or library. Complete idea of publishing it, is to provide readers a good platform to study the rare topics in pharmacology. This book is recommended for MBBS, MD (Pharmacology), DM (Clinical Pharmacology), Pharm D., M. Pharm and B. Pharm students or any other healthcare professionals. The book is a strong learning aid for post graduate teaching and also helps clinicians or other healthcare professionals understand the pharmacological basis of pharmacotherapeutics through thematic flow diagrams and logical explanations for specialized topics in pharmacology to ease the reading. Book is divided into three sections; Initial two sections of the book deal with basic aspects of clinical pharmacology, regulation and therapeutics; also address the most recent advances in the field. Third section is thoroughly updated to provide readers with an ideal reference that covers wide range of neglected but important topics. It also provides a

rich collection of material on critical areas such as medication errors, rational use of drugs, self medication, drug compliance etc. Several other essential regulations framed in India for drugs have been incorporated in the chapters drug policy, drug pricing, orphan drugs etc. Further, critical issues in pharmacology like usage of drugs in pregnancy, renal and hepatic complications, drug-drug interactions etc. are also addressed in a point specific manner to simplify the language to readers. Emerging topics in medical fields like regenerative medicine, nanomedicine, electronic prescribing (e-Rx), drug surveillance systems like Pharmacovigilance, Haemovigilance, Materiovigilance etc. are well explained. Hope, "Advanced Pharmacology", will fulfill the demand and need of healthcare professionals by covering the important and rare topics on drugs.

Mechanisms of Drug Interactions - Patrick F. D'Arcy 2012-12-06

Over the years a number of excellent books have classified and detailed drug drug interactions into their respective categories, e.g. interactions at plasma protein binding sites; those altering intestinal absorption or bioavailability; those involving hepatic metabolising enzymes; those involving competition or antagonism for receptor sites, and drug interactions modifying excretory mechanisms. Such books have presented extensive tables of interactions and their management. Although of considerable value to clinicians, such publications have not,

however, been so expressive about the individual mechanisms that underlie these interactions. It is within this sphere of "mechanisms" that this present volume specialises. It deals with mechanisms of in vitro and in vivo, drug-drug, drug food and drug-herbals interactions and those that cause drugs to interfere with diagnostic laboratory tests. We believe that an explanation of the mechanisms of such interactions will enable practitioners to understand more fully the nature of the interactions and thus enable them to manage better their clinical outcome. If mechanisms of interactions are better understood, then it may be possible for the researcher to develop meaningful animal/biochemical/tissue culture or physicochemical models to which new molecules could be exposed during their development stages. The present position, which largely relies on patients experiencing adverse interactions before they can be established or documented, can hardly be regarded as satisfactory. This present volume is classified into two major parts; firstly, pharmacokinetic drug interactions and, secondly, pharmacodynamic drug interactions.
