Making Global Value Chains Work for Development - Daria Taglioni 2016-06-10

Economic, technological, and political shifts as well as changing business strategies have driven firms to unbundle production processes and disperse them across countries. Thanks to these changes, developing countries can now increase their participation in global value chains (GVCs) and thus become more competitive in agriculture, manufacturing and services. This is a paradigm shift from the 20th century when countries had to build the entire supply chain domestically to become competitive internationally. For policymakers, the focus is on boosting domestic value added and improving access to resources and technology while advancing development goals. However, participating in global value chains does not automatically improve living standards and social conditions in a country. This requires not only improving the quality and quantity of production factors

and redressing market failures, but also engineering equitable distributions of opportunities and outcomes - including employment, wages, work conditions, economic rights, gender equality, economic security, and protecting the environment. The internationalization of production processes helps with very few of these development challenges. Following this perspective, *Making Global Value Chains Work for Development* offers a strategic framework, analytical tools, and policy options to address this challenge. The book conceptualizes GVCs and makes it easier for policymakers and practitioners to discuss them and their implications for development. It shows why GVCs require fresh thinking; it serves as a repository of analytical tools; and it proposes a strategic framework to guide policymakers in identifying the key objectives of GVC participation and in selecting suitable economic strategies to achieve them.

internationally through the Pan-African movement. Du Bois's sociological and historical research on African-American communities and culture broke ground in many areas, including the history of the post-Civil War Reconstruction period. Du Bois was also a prolific author of novels, autobiographical accounts, innumerable editorials and journalistic pieces, and several works of history. One of the most neglected and obscure books by W. E. B. Du Bois, *In Battle for Peace* frankly documents Du Bois's experiences following his attempts to mobilize Americans against the emerging conflict between the United States and the Soviet Union. A victim of McCarthyism, Du Bois endured a humiliating trial—he was later acquitted—and faced political persecution for over a decade. Part autobiography and part political statement, *In Battle for Peace* remains today a powerful analysis of race in America. With a series introduction by editor Henry

Louis Gates, Jr., and an introduction by Manning Marable, this edition is essential for anyone interested in African American history.

Competing in a Flat World -

Victor K. Fung 2007-09-12

“This is essential reading for anyone seeking to compete—and succeed—in the flat world.” –John Hagel, Chairman of Deloitte Center of Innovation “Competing in a Flat World provides an extraordinary glimpse into a new kind of organizational architecture, one built around the notion of orchestrating resources you don’t control and doing so in a way that builds both trust and agility. This architecture may well turn out to be the dominant model of the firm for the 21st century. This book is a must read for anyone who wants to compete in a flat world. Every chapter details new and powerful ideas.” –John Seely Brown, Former Chief Scientist of Xerox Corporation and coauthor of *The Only Sustainable Edge* “We are led by unstoppable economic forces to connect our resources to form smart networks, either wired or unwired. The authors bring forward the notion of ‘network orchestration,’ an almost one-

size-fits-all strategy for organizations to survive and excel in an ever-flattening world.” -John Chen, Sybase Chairman, CEO and President In the “flat world,” everything changes...above all, what it takes to run a winning company. Success is less about what the company can do itself and more about what it can connect to. Find out how it’s done, from the company that pioneered “flat world” success, Li & Fung, which produces more than \$8 billion in garments and other goods for the world’s top brands and retailers-without owning a single factory. Victor and William Fung and Jerry Wind, author of the best-selling *The Power of Impossible Thinking*, reveal how they’ve replaced “old-fashioned” infrastructure and huge employee bases with a fluid, ever-changing network that can design, manufacture, and deliver almost anything, anywhere. The key to success in this world is a set of principles for “network orchestration,” described for the first time in this book. They

examine how these principles can be applied in manufacturing, services and other industries. They show how to build and orchestrate your own world-class global network. * Compete “network vs. network”-and win! * Create a “big-small” company that combines scale and agility * Forge loose-tight relationships with suppliers * Balance control with empowerment, stability with renewal * Manage the “bumps” in the flat world-from politics to terrorism Visit the authors' website:
