Not only does this phenomenon have consequences for kids’ physical and mental health, it jeopardizes their ability to understand and engage with anything beyond the built environment. Thankfully, with the right mindset, families can find beauty, meaning, and connection in a life lived outdoors. Here, outdoors expert Steven Rinella shares the parenting wisdom he has garnered as a father whose family has lived amid the biggest cities and wildest corners of America. Throughout, he offers practical advice for getting kids radically engaged with nature in a muddy, thrilling,

hands-on way, with the ultimate goal of helping them see their own place within the natural ecosystem. No matter their location—rural, suburban, or urban—caregivers and kids will bond over activities such as: • Camping to conquer fears, build tolerance for dirt and discomfort, and savor the timeless pleasure of swapping stories around a campfire. • Growing a vegetable garden to develop a capacity to nurture and an appreciation for hard work. • Fishing local lakes and rivers to learn the value of patience while grappling with the possibility of failure. • Hunting for sustainably managed wild game to face the realities of life, death, and what it really takes to obtain our food. Living an outdoor lifestyle fosters in kids an insatiable curiosity about the world around them, confidence and self-sufficiency, and, most important, a lifelong sense of stewardship of the natural world. A glass kingdom is no place for a Mud Fairy. Bloom and her mud fairy magic might be able to turn weeds into flowers and spin sand into glass, but the people of the kingdom ceaselessly complain about the trails of dirt and puddles of mud that seem to follow her every step, and finally they cast her out. But when the glass castle begins to crack, then cracks some more, the King and Queen in a panic search for the long-banished fairy, but they can't find Bloom anywhere. Desperate to save their home, they send their meekest, most ordinary subject, a girl named Genevieve whose sole task until now has been to polish the Queen's crystal sugar spoon—to coax any worthy fairy to come and save the kingdom. Buzz - Thor Hanson 2018-07-10

As seen on PBS's American Spring LIVE, the award-winning author of *The Triumph of Seeds* and *Feathers* presents a natural and cultural history of bees: the buzzing wee beasties that make the world go round. Bees are like oxygen: ubiquitous, essential, and, for the most part, unseen. While we might overlook them, they lie at the heart of relationships that bind the human and natural worlds. In *Buzz*, the beloved Thor Hanson takes us on a journey that begins 125 million years ago, when a wasp first dared to feed pollen to its young. From honeybees and bumbles to lesser-known diggers, miners, leafcutters, and masons, bees have long been central to our harvests, our mythologies, and our very existence. They've given us sweetness and light, the beauty of flowers, and as much as a third of the foodstuffs we eat. And, alarmingly, they are at risk of disappearing. As informative and enchanting as the waggle dance of a honeybee, *Buzz* shows us why all bees are wonders to celebrate and protect. Read this book and you'll never overlook them again.

Bringing Nature Home - Douglas W. Tallamy 2009-09-01

"If you cut down the goldenrod, the wild black cherry, the milkweed and other natives, you eliminate the larvae, and starve the birds. This simple revelation about the food web—and it is an intricate web, not a chain—is the driving force in *Bringing Nature Home*." —The New York Times As development and subsequent habitat destruction accelerate, there are increasing pressures on wildlife populations. But there is an important and simple step toward reversing this alarming trend: Everyone with access to a patch of earth can make a significant

contribution toward sustaining biodiversity. There is an unbreakable link between native plant species and native wildlife—native insects cannot, or will not, eat alien plants. When native plants disappear, the insects disappear, impoverishing the food source for birds and other animals. In many parts of the world, habitat destruction has been so extensive that local wildlife is in crisis and may be headed toward extinction. Bringing Nature Home has sparked a national conversation about the link between healthy local ecosystems and human well-being, and the new paperback edition—with an expanded resource section and updated photos—will help broaden the movement. By acting on Douglas Tallamy's practical recommendations, everyone can make a difference.

Growing Perennial Foods - Acadia Tucker
2019-02-15

Acadia Tucker's long love affair with perennial foods has produced this easy-to-understand guide to growing and harvesting them. A regenerative farmer who is deeply concerned about global warming, Tucker believes there may be no better time to plant these hardy crops. Perennials can weather climate extremes, promote healthy soil, mitigate drought conditions, and thrive without chemical fertilizers and pesticides. Many can be harvested year round. They taste good, pack lots of nutrients, and require little tending. In short, the world is a better place with more perennials in it and this book intends to get us there. Tucker inspires action by first laying the groundwork for tending an organic, regenerative garden. She highlights the 10 steps she recommends gardeners take to help perennial foods thrive. But most of the book is dedicated to profiles of popular perennial herbs, fruit, and vegetables, with explicit instructions on how to plant, grow, and harvest them. Tucker also offers suggestions on how to store and preserve perennials. *Growing Perennial Foods* is illustrated with dozens of pen & ink drawings and ends with a short chapter on frequently asked questions. And since this is a field guide, each profile gives readers enough space to write in any additional notes. While designed for gardening novices, this book is also for experienced gardeners who want to grow more resilient crops, and could use a little guidance. *Growing Perennial Foods* is part of our *Growing Food* book series and a companion guide to *Growing Good Food: A Citizen's Guide to Backyard Carbon Farming*, which is also written by Acadia Tucker and set to publish in early 2019.
