Head First HTML5 Programming - Eric Freeman  
2011-10-06  
HTML has been on a wild ride. Sure, HTML started as a mere markup language, but more recently HTML's put on some major muscle. Now we've got a language tuned for building web applications with Web storage, 2D drawing, offline support, sockets and threads, and more. And to speak this language you've got to go beyond HTML5 markup and into the world of the DOM, events, and JavaScript APIs. Now you probably already know all about HTML markup (otherwise known as structure) and you know all about CSS style (presentation), but what you've been missing is JavaScript (behavior). If all you know about are structure and presentation, you can create some great looking pages, but they're still just pages. When you add behavior with JavaScript, you can create an interactive experience; even better, you can create full blown web applications. Head First HTML5

Programming is your ultimate tour guide to creating web applications with HTML5 and JavaScript, and we give you everything you need to know to build them, including: how to add interactivity to your pages, how to communicate with the world of Web services, and how to use the great new APIs being developed for HTML5. Here are just some of the things you'll learn in *Head First HTML5 Programming*: Learn how to make your pages truly interactive by using the power of the DOM. Finally understand how JavaScript works and take yourself from novice to well-informed in just a few chapters. Learn how JavaScript APIs fit into the HTML5 ecosystem, and how to use any API in your web pages. Use the Geolocation API to know where your users are. Bring out your inner artist with Canvas, HTML5's new 2D drawing surface. Go beyond just plugging a video into your pages, and create custom video experiences. Learn the secret to grabbing five megabytes of storage in every user's browser. Improve your page's

responsiveness and performance with Web workers. And much more.

*iPhone Apps mit HTML, CSS und JavaScript* - Jonathan Stark 2010-05-31

Es geht auch ohne Objective-C und Cocoa! Wenn Sie HTML, CSS und JavaScript können, haben Sie alles, was Sie brauchen, um eine schicke, funktionstüchtige iPhone-Applikation zu entwickeln. Im iPhone-Look&Feel, nur mit Standard-Technologien und unschlagbar einfach.

Wer will schon gern bei Null anfangen? Sich in eine neue Programmiersprache und ungewohnte Entwicklungswerkzeuge einzuarbeiten, ist ganz schön mühsam - und völlig überflüssig. Nutzen Sie Ihr Webwissen und legen Sie los: Mit HTML5 können Sie Daten auf dem Client speichern und Anwendungen entwickeln, die offline funktionieren. Mit CSS bekommen Sie den echten iPhone-Look hin, und mit den richtigen JavaScript-Helfern klappt's auch mit den Animationen. Das Beste aus zwei Welten Wollen Sie den App Store als Verbreitungskanal für Ihre Anwendung nutzen? Oder möchten Sie, dass Ihre App auf verschiedenen mobilen Geräten läuft? Dann nutzen Sie das Open Source-Framework PhoneGap, das aus Ihrer Web-App ein installierbares Programm macht. Die Vorzüge der Webversion können Sie trotzdem nutzen: Testen und verbessern Sie Ihre App kontinuierlich und zeitnah, bevor Sie sie Apples Review-Prozedere überantworten. Kompakt, schnell, praxisbezogen Jonathan Stark ist kein

Freund des Seitenschindens: Er kommt sofort zur Sache und bringt alle in der Praxis wichtigen Schritte klar und strukturiert auf den Punkt. Vermutlich brauchen Sie für diesen kompakten, praxisnahen Leitfaden nur wenige Stunden, und Ihre Anwendung steht.
