Bit Pop Revolution - Tomaso Walliser 2013-12-04T00:00:00+01:00
L'alba del personal computer non si poteva vedere dalle vetrate dei grandi edifici di IBM, Xerox o General Electric. L'inizio della rivoluzione digitale è senza brand e senza grandi investimenti, ma nasce semplicemente da un'idea: il potere del computer deve essere disponibile a tutti. I frequentatori dell'Home Computer Club di Menlo Park, nel cuore della Silicon Valley, erano talmente convinti di questo che erano disposti, pur di riuscirci, a costruirseli da soli. Lee Felsenstein, Fred Moore, Gordon French, ma anche Steve Jobs, Steve Wozniak e, almeno in spirito, Bill Gates, contribuirono alla realizzazione del sogno. Questo libro racconta la storia di hippie, attivisti, pacifisti, ingegneri, fuoricorso, ma soprattutto di nerd, che tra la fine degli anni '60 e la metà degli anni '70 dedicarono tutte le loro energie a liberare il potere del computer per renderlo disponibile al mondo. Il resto, come si dice, è storia.

Net Neutrality Compendium - Luca Belli 2015-11-10
The ways in which Internet traffic is managed have direct consequences on Internet users' rights as well as on their capability to compete on a level playing field. Network neutrality mandates to treat Internet traffic in a non-discriminatory fashion in order to maximise end users' freedom and safeguard an open Internet. This book is the result of a collective work aimed at providing deeper insight into what is network neutrality, how does it relates to human rights and free competition and how to properly frame this key issue through sustainable policies and regulations. The Net Neutrality Compendium stems from three years of discussions nurtured by the members of the Dynamic Coalition on Network Neutrality (DCNN), an open and multi-stakeholder group, established under the aegis of the United Nations Internet Governance Forum (IGF).

I Am Cat - 2013-04-23
A cat sleeps, curled up in a warm place, and while it sleeps it dreams. . . of being a tiger, flame cat of the forest; a cheetah - fast as the wind on the African plains; a lion, lounging through the heat of the day, tangled in sunshine on the African savannah; a jaguar, perfectly camouflaged deep in the jungle. And the cat dreams of being a lynx, a puma, a snow leopard, a Scottish wild cat, an Asian fishing cat, and the rare Amur leopard. Finally Cat wakes, a domestic cat again, telling his dreams to the child who is stroking him. Ten wild habitats, ten wild cats and one domestic cat are dramatically and beautifully illustrated in this unique celebration of the cat.
Castel Del Monte - Heinz Gotze 1998
"In the south of Italy stands one of the most beautiful and fascinating castles of the Middle Ages, commissioned by the brilliant Emperor Frederick II of the Hohenstaufen dynasty. Castel del Monte is unique in the history of art and architecture, and the mystery surrounding its function and meaning has inspired the most varied theories, most of which are based on speculation rather than solid analysis."
"Heinz Gotze presents an in-depth study of this enigmatic structure and explores its singularity in the history of art and architecture. This illustrated book presents the reader with insights into the bastion's structure while exploring the cultural influences common to the entire Mediterranean region, including that of medieval Arabic geometry, and the effect these factors had on the conception and construction of Castel del Monte."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Complex Spreading Phenomena in Social Systems - Sune Lehmann 2018-06-21
This text is about spreading of information and influence in complex networks. Although previously considered similar and modeled in parallel approaches, there is now experimental evidence that epidemic and social spreading work in subtly different ways. While previously explored through modeling, there is currently an explosion of work on revealing the mechanisms underlying complex contagion based on big data and data-driven approaches. This volume consists of four parts. Part 1 is an Introduction, providing an accessible summary of the state of the art. Part 2 provides an overview of the central theoretical developments in the field. Part 3 describes the empirical work on observing spreading processes in real-world networks. Finally, Part 4 goes into detail with recent and exciting new developments: dedicated studies designed to measure specific aspects of the spreading processes, often using randomized control trials to isolate the network effect from confounders, such as homophily. Each contribution is authored by leading experts in the field. This volume, though based on technical selections of the most important results on complex spreading, remains quite accessible to the newly interested. The main benefit to the reader is that the topics are carefully structured to take the novice to the level of expert on the topic of social spreading processes. This book will be of great importance to a wide field: from researchers in physics, computer science, and sociology to professionals in public policy and public health.

The Warren Buffett Philosophy of Investment: How a Combination of Value Investing and Smart Acquisitions Drives Extraordinary Success - Elena Chirkova 2015-04-10
Revealed! The secret behind Warren Buffett's 20% return rate over 60 YEARS The Warren Buffett Philosophy of Investment reveals—for the first time—how the world's #1 investor combines his trademark value investing with a unique approach to mergers and acquisitions. The huge interest in Warren Buffett stems from the challenge to understand his history of earning more than 20% on capital annually during the last 60 years. Modern financial theory does not allow for this degree of success, nor has anyone else been able to replicate it. The book argues that Buffett's secret can be explained only if one looks beyond the theory of investing. The author sees the major drivers of his success as the transformation of Mr. Buffett's name into a super-brand of mergers and acquisitions, as well as his hands-off policy with respect to the acquired companies. As a result, Buffett enjoys numerous opportunities to buy first-class companies at moderate prices and keeps the existing good managers responsible for further value creation. Elena Chirkova is a professor of finance in the Higher School for Economics in Moscow and was previously Head of Corporate finance for Deloitte's office in Russia.

The Knowledge We Have Lost in Information - Philip Mirowski 2017-06-01
Information is a central concept in economics, and The Knowledge We Have Lost in Information explores its treatment in modern economics. The study of information, far from offering enlightenment, resulted in all matter of confusion for economists and the public. Philip Mirowski and Edward Nik-Khah argue that the conventional wisdom suggesting "economic rationality" was the core of modern economics is incomplete. In this trenchant investigation, they demonstrate that the history of modern microeconomics is better organized as a history of the treatment of information. The book begins with a brief primer on information, and then shows how economists have responded over time to successive developments on the concept of information in the natural sciences. Mirowski and Nik-Khah detail various intellectual battles that were fought to define, analyze, and employ information in economics. As these debates developed, economists progressively moved away from pure agent conscious self-awareness as a non-negotiable desideratum of economic models toward a focus on markets and their design as information processors. This has led to a number of policies, foremost among them: auction design of resources like the electromagnetic spectrum crucial to modern communications. The Knowledge We Have Lost in Information provides insight into the interface between disputes within the economics discipline and the increasing role of information in contemporary society. Mirowski and Nik-Khah examine how this intersection contributed to the dominance of neoliberal approaches to economics, politics, and other realms.

The Origins of the Internet - Tommaso Detti 2017
From 1995 to the present day the number of Internet users has increased from 16 million to 3.7 billion. What are the reasons for such an extraordinary success? This book reconstructs the origins of the Internet from the period following the Second World War to the dissemination of the World Wide Web. It not only considers the technological innovations but also explores the cultural, social and political contexts in which the net developed. The authors interpret the evolution of the "network of networks" as a process in which,

at each stage, the solutions devised by its creators were the most functional to their needs and the most suitable to the times in which they operated. Despite its military origins, it was the users themselves who built the net: a community of researchers, for the most part academics, whose goal was the advancement of knowledge. As a result, and particularly with the advent of email at the beginning of the 1970s, the web was endowed with user-oriented features that continue to characterise it today.

Gli economisti: indovini o scienziati? - Roberto Fini 2015-03-31T00:00:00+02:00

Gli economisti, soprattutto negli ultimi tempi, non godono buona fama: li si accusa di non aver previsto la crisi iniziata nel 2007 e di non riuscire a proporre soluzione adeguate per uscirne. Per alcuni aspetti questo giudizio è condivisibile. Ma è anche ingeneroso nei confronti di quelli che la crisi, al contrario, l'avevano predetta. Questo volume ricostruisce il percorso di una scienza che, nonostante tutto, ha concorso in modo determinante a favorire la crescita materiale e il benessere dell'umanità. Certamente gli economisti non sono indovini e può darsi che alcuni di loro non siano scienziati a tutto tondo, tuttavia in molte occasioni ci hanno preso.

Imagine This - Julia Baird 2011-03-31

Until now, the true story of John Lennon's childhood has never been told. John's sister Julia has herself been on a personal journey that has made it possible only now to reveal the full extent of the pain and difficulties - as well as the happier times - living inside John Lennon's family brought. Julia reveals the various strong, self-willed and selfish women who surrounded John as he grew up. John was removed from his mother at the age of 5 to live with his Aunt Mimi, and here Julia shows for the first time the cruelty of this decision - to both mother and son, she sheds a new light on his upbringing with Mimi which is often at dramatic odds with the accepted tale. John's frequent visits to his mother and sisters gave him the liveliness, freedom and love he sought and allowed him to develop his musical talents. The tragic death of their mother, knocked down outside Aunt Mimi's house by a speeding car when John was 17, meant that life for him and his sisters would never be the same again. Poignant, raw and beautifully written, IMAGINE THIS casts John Lennon's life in a new light and reveals the source of his emotional fragility and musical genius. It is also one family's extraordinary story of how it dealt with fame and tragedy beyond all imagining.

War Games. Da Pong a Super Mario - Tommaso Walliser 2015-01-23T00:00:00+01:00

Lontano dalla retorica del visionario che vuole cambiare i destini del mondo, si trova un'industria che prima e più profondamente di Apple e di Steve Jobs ha condotto l'umanità tra le braccia della rivoluzione digitale: l'industria dei videogame. In quei luoghi malfamati che erano le sale giochi, si poteva fare una partita a PONG senza troppe difficoltà già dieci anni prima che il PC diventasse di uso comune. Con il preciso intento di divertire ma anche di fare soldi (e tanti), aziende come Atari, Nintendo, Midway, Williams, Taito, Namco, Mattel, SEGA hanno messo in contatto masse di ragazzini con la logica binaria e i frame buffer molto prima che i personal computer divenissero un fenomeno osservabile e di massa. Questo libro racconta quarant'anni di battaglie senza esclusione di colpi, spesso oltre il limite della correttezza e delle regole ammesse, per il predominio in un mercato che vale oggi oltre 100 miliardi di dollari, passando attraverso i geniali e spregiudicati protagonisti di un'industria in cui la sfrontatezza vale almeno quanto la tanto celebrata creatività.

Refiguring Mass Communication - Peter Simonson 2010

This unique inquiry into the history and ongoing moral significance of mass communication also represents a defense, extension, and overhaul of the idea and social form of the discipline. Organized around narrative accounts of individuals and their communicative worlds, Refiguring Mass Communication illuminates significant but overlooked rhetorical episodes in history to enable modern-day readers to rehabilitate and reinvigorate their own engagements with mass communication. Coined in the 1920s as a way to describe radio, motion pictures, wide-circulation magazines, and the press, the term "mass communication" frequently is misused in the era of cable TV, niche marketing, and the Internet. In Refiguring Mass Communication, Peter Simonson compares his own vision of mass communication with distinct views articulated throughout history by Paul of Tarsus, Walt Whitman, Charles Horton Cooley, David Sarnoff, and Robert K. Merton, utilizing a collection of texts and tenets from a variety of time periods and perspectives. Drawing on textual and archival research as well as access to Merton's personal papers, Simonson broadly reconceives a sense of communication theory and what social processes might be considered species of mass communication. Simonson reveals the geographical and social contexts from which these visions have emerged and the religious and moral horizons against which they have taken shape. In a unique perspective, he considers the American county fair as an example of a live gathering and crucial site that is overlooked in contemporary forms of mass communication, urging a reconsideration of how individuals participate in and shape similar forms.

The Complete Beatles Chronicle - Mark Lewisohn 2010
In 1979, Beatles expert Mark Lewisohn set about establishing a complete list of the group's live appearances from 1957 through 1966, when they stopped giving concerts; the research took seven long years and was published as the book The Beatles Live! Shortly thereafter, EMI Records invited Lewisohn to be the only person outside of the Beatles and their production staff to go into Abbey Road and listen to the entire collection of Beatles session tapes and to interview practically everyone involved in their making. The result was published in 1988 as The Complete Beatles Recording Sessions, and sold over 150,000 copies. This book artfully combines and updates all the vital material in Lewisohn's earlier two books with his definitive account of the Beatles' work in radio, television, film, and video to create a complete day-by-day summary of the group's entire oeuvre. First published in 1992, The Complete Beatles Chronicle has become the Beatles Bible, the one book no fan can live without, and a perfect companion to the bestselling Beatles Anthology, which recounted their story in their own words.

Models of a Man - Mie Augier 2004-03-26

Essays that pay tribute to the wide-ranging influence of the late Herbert Simon, by friends and colleagues. Herbert Simon (1916-2001), in the course of a long and distinguished career in the social and behavioral sciences, made lasting contributions to many disciplines, including economics, psychology, computer science, and artificial intelligence. In 1978 he was awarded the Nobel Prize in economics for his research into the decision-making process within economic organizations. His well-known book The Sciences of the Artificial addresses the implications of the decision-making and problem-solving processes for the social sciences. This book (the title is a variation on the title of Simon's autobiography, Models of My Life) is a collection of short essays, all original, by colleagues from many fields who felt Simon's influence and mourn his loss. Mixing reminiscence and analysis, the book represents "a small acknowledgment of a large debt." Each of the more than forty contributors was asked to write about the one work by Simon that he or she had found most influential. The editors then grouped the essays into four sections: "Modeling Man," "Organizations and Administration," "Modeling Systems," and "Minds and Machines." The contributors include such prominent figures as Kenneth Arrow, William Baumol, William Cooper, Gerd Gigerenzer, Daniel Kahneman, David Klahr, Franco Modigliani, Paul Samuelson, and Vernon Smith. Although they consider topics as disparate as "Is Bounded Rationality Unboundedly Rational?" and "Personal Recollections from 15 Years of Monthly Meetings," each essay is a testament to the legacy of Herbert Simon—to see the unity rather than the divergences among disciplines.
