Sometimes impressionistic, sometimes experimental, sometimes brutally cruel, sometimes surprisingly warm and funny, these five stories describe love lost, friendships formed and lives questioned. This book includes *The Lady in the Looking Glass*, *A Society*, *The Mark on the Wall*, *Solid Objects* and *Lappin and Lapinova*.

Angel - Elizabeth Taylor 2012-02-14

Perhaps every novelist harbors a monster at heart, an irrepressible and utterly irresponsible fantasist, not to mention a born and ingenious liar, without which all her art would go for naught. Angel, at any rate, is the story of such a monster. Angelica Deverell lives above her diligent, drab mother's grocery shop in a dreary turn-of-the-century English neighborhood, but spends her days dreaming of handsome Paradise House, where her aunt is enthroned as a maid. But in Angel's imagination, she is the mistress of the house, a realm of lavish opulence, of evening gowns and peacocks. Then she begins to write popular novels, and this fantasy becomes her life. And now that she has tasted success, Angel has no intention of letting anyone stand in her way—except, perhaps, herself.

Handbook of Marine Natural Products - Ernesto Fattorusso 2012-04-21

"Handbook of Marine Natural Products" takes a fresh approach to describing the major themes of research in this rapidly developing field. This two volume reference work begins with a section that provides a taxonomic survey of the secondary metabolites of diverse marine life including microbes, algae, and invertebrates. This is followed by a demonstration of the techniques and strategies employed in modern structure elucidation of complex natural products. The natural roles of marine natural products are then explored in a series of focused chapters which include the topics of symbiosis, anti-predation and antifouling, chemical interactions, and defence against UV stress. Various routes which facilitate the understanding of marine natural product biosynthesis are subsequently explained and these are followed by an extensive set of chapters on the biomedical potential of marine natural products. The latter portion of this section considers the technologies and scientific disciplines necessary for advancing bioactive marine natural product lead compounds into actual pharmaceuticals. The reference work finishes with a selection of chapters describing marine toxins and their impact on public health and seafood resources. Final thoughts presented at the end of the second volume focus on the future of this field of investigation and discovery research. This publication is presented as a reference handbook and general concepts are emphasized and illustrated with numerous interesting examples, graphical information, and a comprehensive index. "Handbook of Marine Natural Products" introduces students who are at advanced undergraduate and entry graduate

student levels to this fascinating multidisciplinary field. It is an ideal desk companion for courses focusing on this contemporary area.
