**Newton and the Antigravity Formula** - Luca Novelli 2017-06-01

Back in the late 1600s, science was still in its infancy. If you dropped an apple it would fall to the ground, but nobody could explain why. That changed in 1687 when Isaac Newton, a professor at the University of Cambridge, published a book describing three laws of motion as well as a theory of universal gravitation. Newton also came up with a brand new field of mathematics, called calculus, to explain it all. The same equations that described the motion of a falling apple could also be used to describe the motion of planets orbiting the sun. It was revolutionary! Newton would go on to make new discoveries on the nature of light. But he also made mistakes; his fascination with alchemy, the hope of turning one element into another, was a tremendous waste of his genius. But science is not just about successful experiments--sometimes it takes a few failures to achieve success. Newton and the Antigravity Formula is a fast-paced, entertaining biography of the man who launched the field of modern physics. In addition to its lively story, it includes 190 illustrations, a glossary, and sidebars covering related topics, from the plague to the planets to the telescope.

**Robinson Crusoe** - Daniel Defoe 2021-03-03

In Robinson Crusoe, Crusoe washes up on an uninhabited island on the North American coast. He lives there for twenty-eight years, documenting his physical and spiritual growth in his journal. Then one day a British ship sails by the island, and he is rescued. In the mid 17th century, Robinson Crusoe begins his career as a sailor, against the wishes of his parents, who would prefer him to go into law. Crusoe survives a deadly shipwreck in the Caribbean and manages to set up a camp for himself on an uninhabited island. Much of the story follows the time Crusoe spent building his shelter and other things to make his life more comfortable. He documents his gardening, goat raising, and hunting, as well as his religious reflections.

**Great Maps** - Jerry Brotton 2014-09-01

The whole world is mapped out for your viewing pleasure in this captivating compendium, ranging from past to present through diverse themes of transport and technology to discoveries and development. Covering the classical maps of the ancient world and traveling through time to reach Google Earth in the 21st century, this unprecedented history of more than 60 maps opens up our planet as never before. Great Maps showcases early Medieval maps like including mappae mundi; iconic transport maps such as the London Underground; important travel maps including Dr. Livingstone's version of Africa; maps of natural wonders such as the ocean floor; and momentous moments including the marks on the Moon left by the lunar landings. There are maps that show the way to heaven, depict lands with no sunshine, and the mysterious home of "the people with no bowels" on this mind-blowing journey. Much more than just geographical data, maps are an accurate reflection of the culture and context of different time frames in history. British historian Jerry Brotton tells the amazing secret stories behind many of the most significant maps ever unearthed, revealing key features and innovative

techniques in incredible detail. The unique insight into how mapmakers have expressed their world views results in this treasured book that makes a welcome addition to any bookshelf or home library.
