CCNA Command Quick Reference - Scott Empson 2005

All key CCNA commands at your fingertips
Quick reference for CCNA exam study
customized for the Cisco Networking Academy
classroom Long-term reference guide for the
workplace and after passing the exam Examples
of how to use the commands are listed for
additional help This "CCNA Command Quick
Reference" contains all of the commands that
are taught in the Cisco Networking Academy
Program CCNA curriculum, with examples on
how to apply them to a real-world situation. This
book is not meant to replace any teaching
materials but rather serve as a supplementary
guide to the course curriculum. As a quick
reference, it will provide students and
professionals easy access to the proper use of all

the commands that are presented to them within
the CCNA curriculum and exam. The book will
cover CCNA semesters 2-4 (as the first semester
does not introduce any commands.) This edition
is based on the current version 3.1 of the
curriculum. The book will parallel the flow of
topics and structure of the online curriculum; as
commands are taught in the curriculum, they
will be presented in the Quick Reference,
showing the following: A.) The command itself,
along with keywords and optional sub-commands
B.) Where it can be used (showing the prompt to
give a frame of reference). Throughout the book
there will be Configuration Examples given to
the reader, which will summarize the previous
group of commands visually by having a diagram
of a network with command outputs, showing all
of the commands needed to create that network,
showing what commands to use, where to use
them, and a summary of why we are using the
commands. This allows the student to see all of
the commands in one location, instead of having

to flip through a bunch of different pages. Scott Empson is an instructor in the Department of Telecommunications at the Northern Alberta Institute of Technology in Edmonton, Alberta, Canada. He teaches Cisco Routing, Switching, and Network Design courses to students at the post-secondary level. He possesses three undergraduate degrees: A Bachelor of Arts, with a Major in English; a Bachelor of Education, again with a Major in English/Language Arts; and a Bachelor of Applied Information Systems Technology, with a Major in Network Management. His industry certifications are CCNP, CCDA, CCAI, and Network+. After this project he plans on attending the University of Alberta to complete his Masters Degree in Science in Internetworking

Topics covered include router and switch navigation and administration, Ethernet LAN switches, VLANs and trunking, Spanning

Tree Protocol (STP), IPv4 and IPv6 addressing and subnetting, subnet design, VLSM, route summarization, IPv4 Access Control Lists (ACL), Network Address Translation (NAT), DHCP, HSRP, GLBP, router on a stick (ROAS), operating Cisco routers, IPv4 and IPv6 routing, OSPF configuration and troubleshooting, EIGRP configuration and troubleshooting, Frame Relay, network management, SNMP, IOS licensing, and network troubleshooting. Experience realistic network device responses as you perform each lab, which include detailed instructions, topology diagrams, critical-thinking questions, hints, and answers. Working through the labs, you will quickly become proficient with all the common Cisco IOS version 15 router and switch commands on the CCNA Routing and Switching exam. Choose from almost 400 labs organized by lab type or by topic. Track your progress with the lab status indicator, and use the new search feature to search for commands and keywords. Review lab objectives and step-by-step

instructions within each lab, opening hints and tips sections that help you when you get stuck. Record your observations on device performance in interactive tables. Enter answers to critical thinking questions and get instant feedback to verify your work. Access performance reports in this easy-to-navigate grade history screen, which store all your attempts on each lab. View device configuration details, lab question performance, time to complete each lab, and CLI activity for each device in every lab. Export lab results to PDF files for easy sharing. Unlike other simulators on the market, the lab scenarios included in the Cisco CCNA Routing and Switching 200-120 Network Simulator are far more complex, challenging you to learn how to perform real-world network configuration and troubleshooting tasks. Note - this version is for classroom use. The ISBN for the version for personal study is 978-0-7897-5088-0.

Ccent Icnd1 100-105 Network Simulator - Sean Wilkins 2016-12-11

The CCENT ICND1 100-105 Network Simulator is a single-user software package. It helps users develop and enhance hands-on configuration and troubleshooting skills without the investment in expensive lab hardware. This state of the art simulation software allows users to practice their networking skills with 250 structured labs designed to reinforce CCENT exam topics, including router and switch navigation and administration, LAN switching, IP addressing, routing, WANs, VLANs and trunking, IP routing protocols, scaling IP, and troubleshooting. Users will experience realistic network device response as they work through each of the labs developed by best selling author and expert instructor Wendell Odom. The software comes complete with 250 structured labs, including skill building configuration exercises, configuration scenarios, complex

troubleshooting scenarios, and subnetting exercises. All the labs are developed with the objective of gaining the hands-on skills necessary to successfully answer the simulation and scenario-based questions on the actual CCENT exam. Each lab includes detailed instructions, topology diagrams, full answers and complete explanations. "
