Sustainable Finance  
2017-12-27

A fast growing share of investors have recently widened their scope of analysis to criteria regarded as extra-financial. They are driven by different motivations. Adoption of sustainable investment strategies can be driven, on the one hand by the sole motivation to hedge portfolios against knowable risks by expanding the conceptual

framework to incorporate the latest best practice in risk management. Other investors focus rather on a long-term view and make an active bet on societal change. Recent empirical research has shown that considering sustainability factors within investment practices does not come at a cost (i.e. through a reduced opportunity set) but allows for competitive returns.

Furthermore, the growing market and resulting competition in the wake of sustainable investing going mainstream has the welcome effect to compress fees for such products. Hence, staying informed about recent trends in sustainable investing is imperative no matter what the main motivation is.

**Aviation Policy Framework** - Great Britain: Department for Transport 2013-03-22

In July 2012, the Government consulted on its strategy for aviation, the draft Aviation Policy Framework. This final Aviation Policy Framework will fully replace the 2003 Air Transport White Paper (Cm.6046, ISBN 9780101604628) on aviation, alongside Government decisions following the recommendations of the Independent Airports Commission, established September 2012. The Aviation Policy Framework is underpinned by two core principles: (i) Collaboration: achieved by working together with industry, regulators, experts, local communities to identify workable solutions; (ii) Transparency: decision making based on clear, independent information and processes. The Framework Policy covers the following areas: (1) Supporting growth and benefits of aviation; (2) Managing aviation's environmental impacts, such as climate change and noise pollution; (3) The role of the Airports Commission; (4) Other aviation

objectives, including:  
protecting passenger' rights;  
competition and regulation  
policy; airspace; safety;  
security and planning.

### *Counting the Cost of COVID-19 on the Global Tourism Industry*

- Godwell Nhamo 2020-09-19

This book profiles preliminary findings on the impact of COVID-19 on the travel, tourism and hospitality sector. Starting with a narrative relating COVID-19 to the global development agendas, the book proceeds with a focus on global tourism value chains and linkages between COVID-19 and the Sustainable Development Goals (SDGs). Other perspectives addressed in separate chapters include impacts of COVID-19 on various industries within the global tourism value chain including aviation, airports, cruise ships, car rentals as well as ride and share car services, hotels, restaurants, sporting, pilgrimage and religious tourism, gaming and entertainment, and the stock

market. The book also includes chapters on corporate, philanthropic and public donations, as well as tourism economic stimulus packages. It then concludes with a chapter focusing on building back a better tourism sector post-COVID-19 that strongly draws from the Sendai Framework on Disaster Risk Reduction (2015-2030) and the disaster cycle. To this end, this book is suitable as a read for several professionals in disciplines such as tourism and hospitality studies, economics, sustainable development, development studies, environmental sciences, geography, politics, planning and public health.

21st Century Airlines - Nawal K. Taneja 2017-09-08  
In 21st Century Airlines: Connecting the Dots, Nawal

Taneja addresses the challenges and opportunities facing the airline industry as it tries to innovate and create products and services that are radically different by 'connecting the dots' at four key levels: recognizing the implications of global events, improving cross-functional collaboration within the organization, working more closely with the travel chain, and providing much higher engagements with connectors within the social networks. The book synthesizes insights gained from the experience of non-traditional businesses, such as Uber, that have no physical assets and that focus on scalability through platforms, as well as traditional businesses, such as Mercedes-Benz, that are transitioning from operators of physical assets to adapt to the on-demand and sharing economies. These insights show pragmatically that digitizing airline businesses would require digital mind-sets, digital technologies, digital strategies, and digital

workplaces to explore new frontiers in value for both customers and airlines. Moreover, forward-thinking airlines need to consider working with bimodal organizational structures, in which one group optimizes current business models (network, fleet, and schedule planning, as well as revenue management) while a second group explores innovative ways to add digital features to physical products to provide a consistent experience throughout the journey. The book is written for all senior-level practitioners of airlines and related businesses worldwide, as well as senior-level government policymakers.

### **Freight Forwarder's Intermediary Role in Multimodal Transport Chains**

Hans-Joachim Schramm 2012-01-05

In this book, the business of international freight forwarding is examined from both a theoretical and empirical point of view with a special emphasis on

multimodal transport chains, including sea or air transport operations. In such contexts, the freight forwarder is always considered "The Architect of Transport", but this intermediary role seems to be largely neglected in research to date. Therefore, relevant concepts from economic theory and economic sociology are employed to produce both an intermediary and a network perspective of freight forwarding in order to provide a better understanding of this kind of transportation business. Furthermore, its intermediary role in such inherent network structures is explored by mapping relationship patterns in a stylized model framework applied to a questionnaire-based sample collected among freight forwarders engaged in such multimodal transport chains in Germany (especially from Hamburg, Bremen and Bremerhaven) as well as in Austria in 2003.

**Trade Competitiveness of the Middle East and North Africa** - José Roberto López  
2009

The traditional policy reform agenda concentrated on reduction of tariff and non-tariff barriers between countries in the region and toward international markets is necessary, but not sufficient reason, for success. New opportunities, notably on trade and transport, and the services market deserve a higher profile on the policy agenda.

**Moving Boxes by Air** - Peter S. Morrell 2018-10-08

Air cargo is a key element of the global supply chain. It allows outsourcing of manufacturing to other countries and links production in both multinational and smaller enterprises. It has also been the most important driver of certain export industries in countries such as South Africa, Kenya and Chile. As a component of the air transport industry, air cargo makes the crucial difference between profit and loss on many long-haul routes. This second

edition of *Moving Boxes by Air* offers a comprehensive and up-to-date guide to the business and practices of air cargo, with chapters dedicated to key issues such as current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts. The book illustrates the recent emphasis on mergers at the expense of alliances, which have not had the impact that they had on passenger operations. The section on security has been expanded to assess in more depth the threats to aircraft from terrorists, particularly in the lower cargo and passenger baggage compartments. Surcharges are examined and the book considers whether all airlines will follow the lead of some to do away with both fuel and security surcharges. The book concludes with a summary of the latest industry forecasts. Fully updated throughout, this edition is the definitive guide to air cargo for professionals within both the aviation and freight industries.

*Africa's Infrastructure* - Vivien Foster 2010

Africa's Infrastructure: A Time for Transformation reflects the collaboration of a wide array of African regional institutions and development partners under the auspices of the Infrastructure Consortium for Africa. It presents the findings of the Africa Infrastructure Country Diagnostic (AICD), a project launched following a commitment in 2005 by the international community (after the G8 summit at Gleneagles, Scotland) to scale up financial support for infrastructure development in Africa. The lack of reliable information in this area made it difficult to evaluate the success of past

interventions, prioritize current allocations, and provide benchmarks for measuring future progress, hence the need for the AICD.

## **Grid-Scale Energy Storage Systems and Applications** -

Fu-Bao Wu 2019-06-11

Grid-Scale Energy Storage Systems and Applications

provides a timely introduction to state-of-the-art technologies and important demonstration projects in this rapidly developing field. Written with a view to real-world applications, the authors describe storage technologies and then cover operation and control, system integration and battery management, and other topics important in the design of these storage systems. The rapidly-developing area of electrochemical energy storage technology and its implementation in the power grid is covered in particular detail. Examples of Chinese pilot projects in new energy grids and micro grids are also included. Drawing on

significant Chinese results in this area, but also including data from abroad, this will be a valuable reference on the development of grid-scale energy storage for engineers and scientists in power and energy transmission and researchers in academia. Addresses not only the available energy storage technologies, but also topics significant for storage system designers, such as technology management, operation and control, system integration and economic assessment Draws on the wealth of Chinese research into energy storage and describes important Chinese energy storage demonstration projects Provides practical examples of the application of energy storage technologies that can be used by engineers as references when designing new systems

The safety and security of  
aircraft operations is of great  
importance to all European

confidence in what is already  
one of the safest aviation  
regions in the world is critical

to the continued development  
of the common EU aviation  
market and to the free

as well as to the economic  
growth of the companies which  
depend on it. This brochure  
outlines the measures taken by  
the European Union to develop  
common, legally binding rules

**The China Alternative -**

Graeme Smith 2021-03-01

In this collection, 17 leading scholars based in Solomon Islands, Fiji, Papua New Guinea, Timor-Leste, Australia, New Zealand, the United States and China analyse key dimensions of the changing relationship between China and the Pacific Islands and explore the strategic, economic and diplomatic implications for regional actors. The China Alternative includes chapters on growing great power competition in the region, as well as the response to China's rise by the US and its Western allies and the island countries themselves. Other chapters examine key dimensions of China's Pacific engagement, including Beijing's programs of aid and diplomacy, as well as the massive investments of the Belt and Road Initiative. The impact of China's rivalry for recognition with Taiwan is examined, and several chapters analyse Chinese communities in the Pacific, and their

relationships with local societies. The China Alternative provides ample material for informed judgements about the ability of island leaders to maintain their agency in the changing regional order, as well as other issues of significance to the peoples of the region. 'China's "discovery" of the diverse Pacific islands, intriguingly resonant of the era of European explorers, is impacting on this too-long-overlooked region through multiple currents that this important book guides us through.' □ —Rowan Callick, Griffith University 'The China Alternative is a must-read for all students and practitioners interested in understanding the new geopolitics of the Pacific. It assembles a stellar cast of Pacific scholars to deeply explore the impact of the changing role of China on the Pacific islands region. Significantly, it also puts the Pacific island states at the centre of this analysis by questioning the collective agency they might have in this

rapidly evolving strategic context.’ —Greg Fry, The Australian National University

**Moving Boxes by Air** - Peter S. Morrell 2016-04-22  
Air cargo is a key element of the global supply chain. It allows outsourcing of manufacturing to other countries and links production in both multinational and smaller enterprises. It has also been the most important driver of certain export industries in countries such as South Africa, Kenya and Chile. As a component of the air transport industry, air cargo makes the crucial difference between profit and loss on many long-haul routes. For some network combination carriers it accounts for up to half of total tonne-kms flown, and as much as one quarter of total revenue. In addition, the integrated carriers such as DHL, FedEx and TNT have their own fleets of dedicated freighter aircraft,

and cargo aircraft operators like Cargolux and Nippon Cargo have a specialist role in the industry. Featuring expert analysis and worked examples to enhance understanding, *Moving Boxes by Air* by Peter Morrell offers a comprehensive and up-to-date guide to the business and practices of air cargo, with a chapter dedicated to each key issue, such as: current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts.
