The Resurrection 140 Prefatory Note The author of this book is an Assyrian. His people, now struggling for bare existence in a non-fertile corner of Iraq, are the pitiful surviving remnant of that conquering race which for thousands of years dominated the fertile heart of Asia Minor, living and writing mighty volumes of world art and world history. They that once came down like a wolf on the fold are themselves today scattered Christian sheep, harried by their fierce neighbors. These present Assyrians, largely mixed with the blood of the captive Tribes, represent the old est existing Christian Church. Their bishops claim an unbroken succession stretching back practically to the time of Jesus. Their Gospel text dates from the second century, nearly two hundred years closer to the event than the Greek MSS. on which our version is based, and free from that translation into a foreign idiom which proverbially de stroys the integrity of the written word. Their native tongue, alone of all spoken now, is that Aramaic Jesus spoke. They still live and think and talk as did the people among whom Jesus was born and to whom he revealed his message. Mr. Lamsa grew up and was trained for the priesthood amid these unchanged ancient cus toms and traditions. From this background of a peculiar intimacy, and with tireless study of the neglected old Aramaic MSS., the author has drawn a portrait of Jesus through native eyes, bringing fresh illumination on many points to Western readers. Again and again dark and troublesome passages, on which commentators have produced libraries of labored explanation, become clear and obvious in the light of the colloquial speech, which the writer knows as only a native knows a language, and the local Oriental habits of thought of those for whom our Gospels were first recorded. Strangely enough, considering the vast literature on the subject, this seems to be the first such presentation of the historical Jesus by one who speaks Aramaic. HENRY WYSHAM LANIER

Functional safety of machine controls - Hauke, M. 2019-08-20

The EN ISO 13849-1 standard, "Safety of machinery - Safety-related parts of control systems", contains

provisions governing the design of such parts. This report is an update of BGIA Report 2/2008e of the same name. It describes the essential subject-matter of the standard in its third, revised 2015 edition, and explains its application with reference to numerous examples from the fields of electromechanics, fluidics, electronics and programmable electronics, including control systems employing mixed technologies. The standard is placed in its context of the essential safety requirements of the Machinery Directive, and possible methods for risk assessment are presented. Based upon this information, the report can be used to select the required Performance Level PLr for safety functions in control systems. The Performance Level PL which is actually attained is explained in detail. The requirements for attainment of the relevant Performance Level and its associated Categories, component reliability, levels of diagnostic coverage, software safety and measures for the prevention of systematic and common-cause failures are all discussed comprehensively. Background information is also provided on implementation of the requirements in real-case control systems. Numerous example circuits show, down to component level, how Performance Levels a to e can be engineered in the selected technologies with Categories B to 4. The examples provide information on the safety principles employed and on components with well-tried safety functionality. Numerous literature references permit closer study of the examples provided. The report shows how the requirements of EN ISO 13849-1 can be implemented in engineering practice, and thus makes a contribution to consistent application and interpretation of the standard at national and international level.

Implementing Industry 4.0 - Carlos Toro 2021-04-03

This book relates research being implemented in three main research areas: secure connectivity and intelligent systems, real-time analytics and manufacturing knowledge and virtual manufacturing. Manufacturing SMEs and MNCs want to see how Industry 4.0 is implemented. On the other hand, groundbreaking research on this topic is constantly growing. For the aforesaid reason, the Singapore Agency for Science, Technology and Research (A*STAR), has created the model factory initiative. In the model factory, manufacturers, technology providers and the broader industry can (i) learn how I4.0 technologies are implemented on real-world manufacturing use-cases, (ii) test process improvements enabled by such technologies at the model factory facility, without disrupting their own operations, (iii) co-develop technology solutions and (iv) support the adoption of solutions at their everyday industrial operation. The book constitutes a clear base ground not only for inspiration of researchers, but also for companies who will want to adopt smart manufacturing approaches coming from Industry 4.0 in their pathway to digitization.

Quest for the Living God - Elizabeth A. Johnson 2011-07-21

'Since the middle of the twentieth century,' writes Elizabeth Johnson, 'there has been a renaissance of new insights into God in the Christian tradition. On different continents, under pressure from historical events and social conditions, people of faith have glimpsed the living God in fresh ways. It is not that a wholly different God is discovered from the One believed in by previous generations. Christian faith does not believe in a new God but, finding itself in new situations, seeks the presence of God there. Aspects long-forgotten are brought into new relationships with current events, and the depths of divine compassion are appreciated in ways not previously imagined.' This book sets out the fruit of these discoveries. The first chapter describes Johnson's point of departure and the rules of engagement, with each succeeding chapter distilling a discrete idea of God. Featured are transcendental, political, liberation, feminist, black, Hispanic, interreligious, and ecological theologies, ending with the particular Christian idea of the one God as Trinity.

Investment Governance for Fiduciaries - Michael E. Drew 2019-04-22

Governance is a word that is increasingly heard and read in modern times, be it corporate governance, global governance, or investment governance. Investment governance, the central concern of this modest volume, refers to the effective employment of resources—people, policies, processes, and systems—by an individual or governing body (the fiduciary or agent) seeking to fulfil their fiduciary duty to a principal (or beneficiary) in addressing an underlying investment challenge. Effective investment governance is an enabler of good stewardship, and for this reason it should, in our view, be of interest to all fiduciaries, no matter the size of the pool of assets or the nature of the beneficiaries. To emphasize the importance of effective investment governance and to demonstrate its flexibility across organization type, we consider our investment governance process within three contexts: defined contribution (DC) plans, defined benefit (DB) plans, and endowments and foundations (E&Fs). Since the financial crisis of 2007–2008, the financial sector's place in the economy and its methods and ethics have (rightly, in many cases) been under scrutiny. Coupled with this theme, the task of investment governance is of increasing importance due to the sheer weight of money, the retirement savings gap, demographic trends, regulation and activism, and rising

standards of behavior based on higher expectations from those fiduciaries serve. These trends are at the same time related and self-reinforcing. Having explored the why of investment governance, we dedicate the remainder of the book to the question of how to bring it to bear as an essential component of good fiduciary practice. At this point, the reader might expect investment professionals to launch into a discussion about an investment process focused on the best way to capture returns. We resist this temptation. Instead, we contend that achieving outcomes on behalf of beneficiaries is as much about managing risks as it is about capturing returns—and we mean “risks” broadly construed, not just fluctuations in asset values.
