Paratransit in African Cities - Roger Behrens
2015-09-07

Public transport systems in contemporary Sub-

Saharan African cities are heavily reliant upon paratransit services. These services are defined as informal transportation which operates between the public and individual private spheres. In Africa paratransit is characterized by low quality of vehicles and chaotic management but it also provides cheap, accessible and flexible transport solutions for the urban poor. It is typically poorly regulated and operates as a set of informal businesses. A common result of weak public sector regulation and a fare strategy in which owners claim a fixed daily revenue target and drivers who keep the variable balance as income, is destructive competition and poor quality of service. There is an incontrovertible case for improving the quality, reliability and coverage of public transport systems, and some city governments have attempted to do so by initiating reform projects that envisage the phased replacement of paratransit operations with formalised bus rapid transit systems. In this book the authors

argue that there are, however, path dependencies and constraints that limit the possible extent of public transport system reform. Paratransit operations also have some inherent advantages with respect to demand responsiveness and service innovation. Attempts to eradicate paratransit may be neither pragmatic nor strategic. Two future scenarios are likely: hybrid systems comprised of both paratransit and formally planned modes; and systems improved by upgrades and strengthened regulation of existing paratransit services. The business strategies and aspirations of incumbent paratransit operators in three case cities – Cape Town, Dar es Salaam and Nairobi – are discussed, as well as their attitudes towards emerging public transport reform projects. International experiences of hybrid system regulation and paratransit business development are reviewed in order to explore policy options. The authors contend that policies recognising paratransit operators, and seeking contextually

This book draws together the main elements of strategic management theory and considers their relevance to contemporary practice in construction. It helps students understand what corporate strategy involves and how it is possible to develop a proactive approach to the management of key organisational resources that are essential to attain objectives. Understanding of the importance of strategic management has developed rapidly in the past decade. Recent economic events have shown that all organisations must continually reassess their approach to achieving intended objectives, especially improvement in customer focus. New Perspectives in Sociology and Allied Fields -

Shashikant Nishant Sharma 2016-06-03

Sociology is the study of the society and the interaction of the individual to individual, community to community, individual to the community and vice versa. The interplay of this social interaction takes place in the playground of the human settlements. Albert J. Reiss has defined, "sociology is the study of social aggregates and groups in their institutional organization, of institutions and their organization, and of the causes and consequences of changes in institutions and social organization." Another sociologist, Parson defined sociology, "Sociology is concerned

"...With the phenomena of the institutionalization of patterns of value-orientation in the social system, with the conditions of that institutionalization, and of changes in the patterns, with conditions of conformity with and deviance from such patterns, and with motivational processes insofar as these- are involved in all of these." So, we find that social systems and social institutions play an important role in the society which acts as a cohesive tool to sustain the social structure and society. Human settlement is the complex entity of the physical habitable space wherein the social interaction in the term of economics and social relationship. But we can simply define, human settlement is an organized grouping of human habitation with basic facilities for sustenance of life. An individual is a part of the family and the family is the part of a community which in term is a part of the locality which might be a part of rural or urban centre. Further, Albert J. Reiss stated, "A society is an

empirical social system that is territorially organized, whose members are recruited by sexual reproduction within it, and persists beyond the lifespan of any individual member by socializing new members to its institutions. India is a land of diversity and this diversity can be seen in the social structures too. Our society has religious groups and each religious groups are further sub-divided into caste. Caste is an Indian social phenomenon which might not be in existence in other countries. Before moving further, it's necessary to understand the difference between caste and class. Caste is an inherent social structure prevalent in our society which has been further strengthened through the provision of caste based reservation in our society through the government. Whereas class is an acquired differential status of an individual and a larger community who has acquired particular qualification or proficiency in a particular field or acquired economic status in society through individual or collective

endeavour. For example, the association of lawyers, association of architects, organization of planners, Institution of engineers etc. The broad based class in terms of the economic status is the low income group, middle income group and high income group. Community is the collective sense of the group of the families which share some common religious, social and economic status. In some society the community can be based on class or caste. For example, community of Brahmins, community of Muslims, community of Christians, etc.

Opportunity - Donald Morris 2006

Can you recognize an opportunity when it comes your way? Even though the concept seems fairly basic, most people harbor regrets about missed

opportunities that in retrospect might have significantly improved their lives. This book will give you the critical tools to sort through the complexities that often obscure the perception of an opportunity and help you take full advantage of what author Donald Morris calls high-end opportunities - pivotal situations that can change your life for the better. Morris begins by developing a model of opportunity in the abstract, analyzing its elements and the contexts and frameworks that affect our recognition of opportunities. Drawing from a wide range of applications, including investing, business, law, criminology, gambling, and even religion, he shows how opportunities can be defined in various contexts. He also examines highly undesirable situations, where opportunity is lacking, such as poverty and historical instances of slavery, to further illustrate, by way of contrast, the defining characteristics of opportunity. How does a significant opportunity differ from a simple option? How does taking

advantage of opportunities differ from being an opportunist? Does our ability to predict the future affect our opportunities? What do we mean by equality of opportunity? By addressing these and other probing questions, Morris shows how to develop more critical perceptions of real opportunities. Donald Morris, CPA, Ph.D., is professor of accounting and chair of the Accounting, Finance, and CIS Department at Eastern New Mexico University.
