STATISTICS - NADAR E. NARAYANAN
2015-01-08

Statistics is vital to decision making in business and our everyday lives. This book on statistics, in its Second Edition, continues to cover both the theoretical and the practical aspects of statistics which facilitate easy understanding of the fundamentals. The book contains twenty-two chapters. It begins with an introduction of statistics and describes statistical survey and sampling methods. It then discusses collection, classification, tabulation, as well as diagrammatic and graphical presentation of data very lucidly. The book then goes on to explain measures of central tendency or averages, measures of dispersion, measures of skewness, kurtosis and moments, and correlation and regression analysis. Finally, index numbers, time series analysis, probability and theoretical distributions, along with vital and population statistics, are discussed in a clear way. This book is primarily designed for the undergraduate and

the postgraduate students of economics, commerce and management. In addition, it will be of great benefit to the students of demography and mathematics. **NEW TO THIS EDITION** • Chapter-end Multiple Choice Questions and Answers. • Sections on "Population Census of 2011", in Chapter 22. **KEY FEATURES** • Includes numerous illustrative examples with solutions throughout the text to illustrate the application of the concepts. • Incorporates a large number of tables, diagrams and graphs to help students understand the concepts clearly. • Provides chapter-end exercises to enable students to test their comprehension of the topics discussed.

Statistics - W. M. Harper 1998-08

The sixth edition of Statistics: - provides a first-class introduction to the subject with careful, lucid explanations; - discusses statistics in six parts: - Introduction - Compilation and presentation - Frequency distributions - Correlation - Time series and index numbers - Sampling theory and inference; - offers complete coverage of introductory professional and academic courses on statistics and quantitative methods; - features end-of-chapter assignments, numerous practice questions with worked answers and a large appendix of examination questions.

Business Statistics (According to Minimum Uniform Syllabus Prescribed by National Education Policy) - Dr. B.N. Gupta 2022-01-14
Business Statistics has been given an important place in our courses of studies in various social sciences, business management, public administration, etc. No student of these disciplines can afford without knowledge of this important branch of knowledge. The present textbook 'Business Statistics' is designed to introduce students of business economics and management to the method and application of Statistics. This book is of utmost utility for the students of various courses namely B.Com, M.Com, MBA, etc. For the help of the students, the subject matter of the book is simple, comprehensible and easily understandable.

Moreover, wherever required, important facts, examples, tables, graphs, etc. are used for enhancing the quality of the chapters. For a better understanding of various theories and principles in each lesson, Practical Problems And Solutions are also included. In addition to this for self-assessment, at the end of each chapter Long Answer Type Questions, Short Answer Type Questions and Objective Type Questions are given.

Regression Analysis, 13. Probability Theory, 14. Probability Distributions (Binomial, Poisson and Normal), 15. Sampling Theory and Tests of Significance. 16. Appendix. SYLLABUS Unit I : Statistics : Concept, Significance & Limitation, Type of Data, Classification & Tabulation, Frequency Distribution & Graphical Representation. Unit II : Measures of Central Tendency (Mean, Median, Mode), Measures of Variation : Significance & Properties of a Good Measure of Variation :

Range, Quartile Deviation, Mean Deviation and Standard Deviation, Measures of Skewness & Kurtosis. Unit III : Correlation : Significance of Correlation, Types of correlation, Simple Correlation, Scatter Diagram Method, Karl Pearson Coefficient of Correlation. Regression : Introduction, Regression Lines, Regression Equation & Regression Coefficient. Unit IV : Probability : Concept, Events, Addition Law, Conditional Probability, Multiplication Law & Baye's Theorem [Simple Numerical], Probability Distribution : Binomial, Poisson and Normal. Unit V : Sampling Method of Sampling, Sampling and Non-Sampling Errors. Test of Hypothesis, Type-I and Type-II Errors, Large Sample Tests.
