**Principled Agents?** - Timothy Besley 2006-06-15

What is good government? Why do some governments fail? How do you implement political accountability in practice? What incentives do you need to put in place to ensure that politicians and public servants act in the public interest and not their own? These questions and many more are addressed

in Timothy Besley's intriguing Lindahl lectures. Economic analyses of government usually divide into two broad camps. One which emphasizes government as a force for public good that can regulate markets, distribute resources and generally work towards improving the lives of its citizens. The other sees government as driven by private interests, susceptible to those with the power to influence its decisions and failing to incentivize its officials to act for the greater public good. This book adopts a middle way between the two extremes, the Publius approach, which recognizes the potential for government to act for the public good but also accepts the fact that things often go wrong. It shares the view that there are certain institutional preconditions for effective government but then proceed to examine exactly what those preconditions are. Timothy Besley emphasises that it is not just about designing an appropriate institutional framework but

also about understanding the way incentives work and the process by which the political class is selected.

How Big Should Our Government Be? - Jon Bakija 2016-06-21

The size of government is arguably the most controversial discussion in United States politics, and this

issue won't fade from prominence any time soon. There must surely be a tipping point beyond which more government taxing and spending harms the economy, but where is that point? In this accessible book, best-selling authors Jeff Madrick, Jon Bakija, Lane Kenworthy, and Peter Lindert try to answer whether our government can grow any larger and examine how we can optimize growth and fair distribution.

*Dull Disasters?* - Daniel Jonathan Clarke 2016

Economic losses from disasters are now reaching an average of US\$250--\$300 billion a year. In the last 20 years, more than 530,000 people died as a direct result of extreme weather events; millions more were seriously injured. Most of the deaths and serious injuries were in developing countries. Meanwhile, highly infectious diseases will continue to emerge or re-emerge, and natural hazards will not disappear. But these extreme events do not need to turn into large-scale disasters. Better and faster responses are possible. The authors contend that even though there is much generosity in the world to support the responses to and recovery from natural disasters, the current funding model, based on mobilizing financial resources after disasters take place, is flawed and makes responses late, fragmented, unreliable, and poorly targeted, while

providing poor incentives for preparedness or risk reduction. The way forward centres around reforming the funding model for disasters, moving towards plans with simple rules for early action and that are locked in before disasters through credible funding strategies while resisting the allure of post-disaster discretionary funding and the threat it poses for those seeking to ensure that disasters have a less severe impact. -- Provided by publisher.

**The New Entrepreneurial Leader** - Danna Greenberg  
2011-09-06

In years past, the keywords for leaders were confidence, single-minded purpose, and strategic planning. But today's vastly complex, globalized, and fast-evolving world requires a different kind of leadership. This game-changing book details a new approach—entrepreneurial leadership—developed at Babson College, the number-one school for entrepreneurship in the world. Entrepreneurial leadership is inspired by, but is separate from, entrepreneurship. It can be applied in any organizational situation, not just start-ups. Based on two years of extensive research, it embraces three principles that add up to a fundamentally new worldview of business and a new logic of decision making.

Downloaded from  
[test.unicaribe.edu.do](http://test.unicaribe.edu.do) on

First, rapid change and increasing uncertainty require leaders to be “cognitively ambidextrous,” able to shift between traditional “prediction logic” (choosing actions based on analysis) and “creation logic” (taking action despite considerable unknowns). Guiding this different way of thinking and acting is a new view of business, where simultaneous creation of social, environmental, and economic value is the order of the day. Finally, entrepreneurial leaders leverage their understanding of themselves and their social context to guide effective action. Each chapter offers concrete examples of how educators across all disciplines are integrating these ideas into their courses—and even their entire curricula. The New Entrepreneurial Leader lays out a comprehensive new paradigm for reinventing management education in order to mold leaders who will shape social and economic opportunity.
