The Call Of Ice - Simone Moro 2014-09-19

* Adventure memoir from a renowned winter climber at the top of his game * Moro reflects on some of his most significant climbs * A bestseller in Italy, this is the first English-language edition of Moro's story Simone Moro is a celebrated Italian alpinist who specializes in winter climbing: He holds the record for first winter ascents of 8000-meter peaks—Shisha Pangma, Makalu, and Gasherbrum II. A passionate climber, he is also an accomplished helicopter pilot and founder of a

helicopter rescue program in Nepal. The Call of the Ice was written during Moro's dramatic winter attempt on Nanga Parbat in 2012—his twelfth attempt on that mountain—during weather delays and other breaks in the climb. Moro reflects on past climbs and partners, including the death of his longtime friend and climbing partner, Anatoli Boukreev, on Annapurna, his mourning when Boukreev died, and his subsequent recovery; Denis Urubko and the nature of climbing partnerships; two attempts on Shisha Pangma; Broad Peak; Makalu; and Gasherbrum II, which he, Urubko, and Cory Richards completed in February 2011 despite near-tragic moments when they miraculously escaped after being swept away by an avalanche. Many of Moro's climbs do not result in a summit and he explains why his interest lies in the attempt itself. In addition to these reflections, we relive in real-time his attempt on Nanga Parbat, which he and Urubko had to abandon after 51 days

and 6600 meters! "I will go in winter. Again. Yes in winter. Just because it's my dream. Just because exploration never ends." - Simone Moro

Physical Optics - Giovanni Giusfredi 2019-11-12

This textbook provides a sound foundation in physical optics by

covering key concepts in a rigorous but accessible manner. Propagation of electromagnetic waves is examined from multiple perspectives, with explanation of which viewpoints and methods are best suited to different situations. After an introduction to the theory of electromagnetism, reflection, refraction, and dispersion, topics such as geometrical optics, interference, diffraction, coherence, laser beams, polarization, crystallography, and anisotropy are closely examined. Optical elements, including lenses, mirrors, prisms, classical and Fabry-Perot interferometers, resonant cavities, multilayer dielectric structures, interference and spatial filters, diffraction gratings, polarizers, and birefringent plates, are treated in depth. The coverage also encompasses such seldom-covered topics as modeling of general astigmatism via 4x4 matrices, FFT-based numerical methods, and bianisotropy, with a relativistic treatment of optical activity and the Faraday

and Fresnel-Fizeau effects. Finally, the history of optics is discussed.

ICCS21 - Antonio J.M. Ferreira
2018-07-23

It is well-known that the topic of composite materials affects many engineering fields, such as civil, mechanical, aerospace, automotive and chemical. In the last decades, in fact, a huge number of scientific papers concerning these peculiar constituents has been published. Analogously, the industrial progress has been extremely noticeable. The study of composite materials, in general, is a challenging activity since the advancements both in the academia and in the industry provide continually new sparks to develop innovative ideas and applications. The communication, the sharing and the exchange of views can surely help the works of many researchers. This aspect represents the main purpose of this Conference, which aims to collect high-level contributions

on the development and the application of composite materials. The establishment of this 21st edition of International Conference on Composite Structures has appeared appropriate to continue what has been begun during the previous editions. ICCS wants to be an occasion for many researchers from each part of the globe to meet and discuss about the recent advancements regarding the use of composite structures, sandwich panels, nanotechnology, bio-composites, delamination and fracture, experimental methods, manufacturing and other countless topics that have filled many sessions during this conference. As a proof of this event, which has taken place in Bologna (Italy), selected plenary and key-note lectures have been collected in the present book.

Integrated Learning) has emerged since the millennium as a major trend in education. Written by Do Coyle, Philip Hood and David Marsh and drawing on their experience of CLIL in secondary schools, primary schools and English language schools across Europe, this book gives a comprehensive overview of CLIL. It summarises the theory which underpins the teaching of a content subject through another language and discusses its practical application, outlining the key directions for the development of research and practice. This book acknowledges the uncertainty many teachers feel about CLIL, because of the requirement for both language and subject knowledge, while providing theoretical and practical routes towards successful practice for all.

Everybody Wants to Go to Heaven but Nobody Wants to Die: Bioethics and the

Transformation of Health Care in America - Amy Gutmann 2019-08-27

NOW FEATURING A NEW AFTERWORD, "PANDEMIC ETHICS" From two eminent scholars comes a provocative examination of bioethics and our culture's obsession with having it all without paying the price. Shockingly, the United States has among the lowest life expectancies and highest infant mortality rates of any high-income nation, yet, as Amy Gutmann and Jonathan D. Moreno show, we spend twice as much per capita on medical care without insuring everyone. A "remarkable, highly readable journey" (Judy Woodruff) sure to become a classic on bioethics, *Everybody Wants to Go to Heaven but Nobody Wants to Die* explores the troubling contradictions between expanding medical research and neglecting human rights, from testing anthrax vaccines on children to using brain science for marketing campaigns. Providing "a clear and compassionate presentation" (Library Journal)

of such complex topics as radical changes in doctor-patient relations, legal controversies over in vitro babies, experiments on humans, unaffordable new drugs, and limited access to hospice care, this urgent and incisive history is "required reading for anyone with a heartbeat" (Andrea Mitchell). *Inventor Lab* - DK 2019-10-03 This DK children's book aged 11-14 is brimming with exciting, educational activities and projects that focus on electronics and technology. Keep your siblings out of your room with a brilliant bedroom alarm, power a propeller motorboat, make a stereo from pipes, build your own AM radio, and construct a night light by following step-by-step instructions and using

affordable equipment. *Inventor Lab* will engage budding scientists and engineers as they experiment, invent, trial, and test technology, electronics, and mechanics at home. Simple steps with clear photographs take readers through the stages of each low-cost project, with fact-filled "How it works" panels to explain the science behind each one, and to fascinate them with real-world examples. With an increasing focus across school curricula on encouraging children to enjoy and explore STEM subjects (science, technology, engineering, and maths), *Inventor Lab* is the perfect companion for any inquisitive child with an interest in how the worlds of science experiments and technology work, and why.
