[Regulating from the Inside](#) - Cary Coglianese 2010-09-30

Environmental Management Systems (EMSs) offer an approach to regulatory policy that lies somewhere between free-market and traditional command-and-control methods. Worldwide, hundreds of thousands of private firms have adopted or are considering adopting these internally managed systems for improving environmental performance. In the United States, the Environmental Protection Agency has established a special recognition for firms that adopt EMSs. Already, numerous state agencies have proposed or adopted

'green-tier systems' that allow firms with EMSs to be exempted from otherwise applicable requirements. Yet while private- and public-sector interest in EMSs is booming, limited empirical evidence is available about the efficacy of EMSs. To close the gap between advocacy and analysis, *Regulating from the Inside* brings together cutting-edge work of leading scholars, providing the most comprehensive analysis to date of environmental management systems. Intended to frame the future policy and the research agenda about EMSs, the discussions are organized around two critical questions: How have EMSs worked in firms that have already adopted them? What potential and limitations do they have as policy tools in the future? Addressing the arguments of both advocates and skeptics, the chapters examine why firms adopt EMSs; how firms implement EMSs; how EMSs answer concerns about fairness, corporate social responsibility, and sustainability; and what kind of impact EMSs may have on the global economy.

[A Methodology for Assessing Economic Risk of Water Supply Shortages](#) - G. K. Young 1972

The report develops a procedure for estimating income losses, to a defined region, associated with varying degrees of water shortage resulting in a frequency-loss function. An empirical list of the procedure was developed for the York, Pennsylvania Water Service Area, which experienced a substantial water shortage in 1966. Study of community response to actual or potential drought reveals a number of different perspectives - the water manager, residential, commercial and industrial users and government. This study opens the way to an alternative method of assessing the benefits for adequate municipal water supplies; it distinguishes between short-run and long-run plans; and the role which each plays in resource planning. [Iowa's Renewable Energy and Infrastructure Impacts](#) - 2010

When these results occur on a large scale, Iowa will start to lose its economic competitive edge in the rapidly developing bioeconomy. The primary objective of this study was to document the current physical and fiscal impacts of Iowa's existing biofuels and wind power industries. A four-county cluster in north-central Iowa and a two-county cluster in southeast Iowa were identified through a local agency survey as having a large number of diverse facilities and were selected for the traffic and physical impact analysis. The research team investigated the large truck traffic patterns on Iowa's secondary and local roads from 2002 to 2008 and associated those with the pavement condition and county maintenance expenditures. The impacts were quantified to the extent possible and visualized using geographic information system (GIS) tools.
