The Routledge Companion to Financial Accounting Theory - Stewart Jones 2015-05-22 Financial accounting theory has numerous practical applications and policy implications, for instance, international accounting standard setters are increasingly relying on theoretical accounting concepts in the creation of new standards; and corporate regulators are increasingly turning to various conceptual frameworks of accounting to guide regulation and the interpretation of accounting practices. The global financial crisis has also led to a new found appreciation of the social, economic and political importance of accounting concepts generally and corporate financial reporting in particular. For instance, the fundamentals of capital market theory (i.e. market efficiency) and measurement theory (i.e. fair value) have received widespread public and regulatory

attention. This comprehensive, authoritative volume provides a prestige reference work which offers students, academics, regulators and practitioners a valuable resource containing the current scholarship and practice in the established field of financial accounting theory.

The End of Accounting and the Path Forward for Investors and Managers - Baruch Lev
2016-06-14

An innovative new valuation framework with truly useful economic indicators *The End of Accounting and the Path Forward for Investors and Managers* shows how the ubiquitous financial reports have become useless in capital market decisions and lays out an actionable alternative. Based on a comprehensive, large-sample empirical analysis, this book reports financial documents' continuous deterioration in relevance to investors' decisions. An enlightening discussion details the reasons why accounting is losing relevance in today's market, backed by numerous examples with real-world impact. Beyond simply identifying the problem, this report offers a solution—the Value Creation Report—and demonstrates its utility in key industries. New indicators focus on strategy and execution to identify and evaluate a company's true value-creating resources for a more up-to-date approach to critical investment decision-making. While entire industries have come to rely on financial reports for vital information, these documents are flawed and insufficient when it comes to the way investors and lenders work in the current economic climate. This book demonstrates an alternative, giving you a new framework for more informed decision making. Discover a new, comprehensive system of economic indicators Focus on strategic, value-creating resources in company valuation Learn how traditional financial documents are quickly losing their utility Find a path forward with actionable, up-to-date information Major corporate decisions, such as restructuring and M&A, are predicated on financial indicators of profitability and asset/liabilities values. These documents move mountains, so what happens if they're based on faulty indicators that fail to show the true value of the company? *The End of Accounting and the Path Forward for Investors and Managers* shows you the reality and offers a new blueprint for more accurate valuation.

This regret is particularly meaningful with regards to Italy, where 'Food', besides being a physiological need to satisfy, is one of the main pillars of the 'Made in Italy' Industry, and the so-called Italian life-style, which has become a part of the popular culture. Accounting and Food seeks to explore the accounting, business and financial history of some of the most prestigious Italian food producers. Moreover, given that "Food" has been at the center of production and trade throughout the history of mankind, food production and commerce will be investigated from the critical angles of accounting, accountants and merchants. Relatedly, the interconnected history of the Food fairs and expositions of the major Italian trade centers will be also unveiled. Accounting and Food examines the role of accounting, accountants and merchants in food production and international trade (e.g., grain, wine, etc...) as well as considering the history of food producers, paying particular attention to the role played by women entrepreneurs over time. Finally the book explores the interrelations of accounting, food and state, local authorities and social institutions, in particular in so far these latter institutions were involved in the Political economy, regulation, allocation and distribution of food to populations and societies. Accounting and Food will be of particular interest to researchers and scholars in the field of accounting history but also to those working in the areas of regional development, regional economics, food and sociology and other related
