Culture Pop - Guido Michelone 2014-05-13

Trans - Juliet Jacques 2015-09-22
An extraordinary memoir of transition and transgender politics and culture "Six weeks before sex reassignment surgery (SRS), I am obliged to stop taking my hormones. I suddenly feel very differently about my forthcoming operation." In July 2012, aged thirty, Juliet Jacques underwent sex reassignment surgery—a process she chronicled with unflinching honesty in a serialised national newspaper column. Trans tells of her life to the present moment: a story of growing up, of defining yourself, and of the

rapidly changing world of gender politics. Fresh from university, eager to escape a dead-end job, she launches a career as a writer in a publishing culture dominated by London cliques and still figuring out the impact of the Internet. She navigates the treacherous waters of a world where, even in the liberal and feminist media, transgender identities go unacknowledged, misunderstood or worse. Yet through art, film, music, politics and football, Jacques starts to become the person she had only imagined, and begins the process of transition. Interweaving the personal with the political, her memoir is a powerful exploration of debates that comprise trans politics, issues which promise to redefine our understanding of what it means to be alive. Revealing, honest, humorous, and self-deprecating, Trans includes an epilogue with Sheila Heti, author of How Should a Person Be?, in which Jacques and Heti discuss the cruxes of writing and identity.

Asylums. Essays on the Social Situation of Mental Patients and Other Inmates - Erving Goffman 1971

Internetworking with TCP/IP - Douglas E. Comer (Informatiker.) 1991

Computer Networks, Fourth Edition - Andrew S. Tanenbaum 2008

Asylums - Erving Goffman 2017-09-08
A total institution is defined by Goffman as a place of residence and work where a large number of like-situated, individuals, cut off from the wider society for an appreciable period of time, together lead an enclosed, formally administered round of life. Prisons serve as a clear example, providing we appreciate that what is prison-like about prisons is found in institutions whose members have broken no laws. This volume deals with total institutions in general and, mental hospitals, in particular. The main focus is, on the world of the inmate, not the world of the staff. A chief concern is to develop a sociological version of the structure of the self. Each of the essays in this book were intended to focus on the same issue--the inmate's situation in an institutional context. Each chapter approaches the central issue from a different vantage point, each introduction drawing upon a different source in sociology and having little direct relation to the other chapters. This method of presenting material may be irksome, but it allows the reader to pursue the main theme of each paper analytically and comparatively past the point that would be

allowable in chapters of an integrated book. If sociological concepts are to be treated with affection, each must be traced back to where it best applies, followed from there wherever it seems to lead, and pressed to disclose the rest of its family.

Cultural Sustainability and Regional Development - Joost Dessein 2015-08-13 Meeting the aims of sustainability is becoming increasingly difficult; at the same time, the call for culture is becoming more powerful. This book explores the relationships between culture, sustainability and regional change through the concept of 'territorialisation'. This new concept describes the dynamics and processes in the context of regional development, driven by collective human agency that stretches beyond localities and marked-off regional boundaries. This book launches the concept of 'territorialisation' by exploring how the natural environment and culture are constitutive of each other. This concept allows us to study the characterisation of the natural assets of a place, the means by which the natural environment and culture interact, and how communities assign meaning to local assets, add functions and ascribe rules of how to use space. By highlighting the time-space dimension in the use and consumption of resources, territorialisation helps to frame the concept and grasp the meaning of sustainable regional development. Drawing on an international range of case

studies, the book addresses both conceptual issues and practical applications of 'territorialisation' in a range of contexts, forms, and scales. The book will be of great interest to researchers and postgraduates in sustainable development, environmental studies, and regional development and planning.

Patient Engagement - Guendalina Graffigna 2016-01-01
Patient engagement should be envisaged as a key priority today to innovate healthcare services delivery and to make it more effective and sustainable. The experience of engagement is a key qualifier of the exchange between the demand (i.e. citizens/patients) and the supply process of healthcare services. To understand and detect the strategic levers that sustain a good quality of patients' engagement may thus allow not only to improve clinical outcomes, but also to increase patients' satisfaction and to reduce the organizational costs of the delivery of services. By assuming a relational marketing perspective, the book offers practical insights about the developmental process of patients' engagement, by suggesting concrete tools for assessing the levels of patients' engagement and strategies to sustain it. Crucial resources to implement these strategies are also the new technologies that should be (1) implemented according to precise guidelines and (2) designed according to a user-centered design process. Furthermore, the book describes possible fields of patients' engagement application by describing the best practices and experiences matured in different fields

**The Ecology and Evolution of Ant-Plant
Interactions** - Victor Rico-Gray 2008-09-15
Ants are probably the most dominant insect
group on Earth, representing ten to fifteen
percent of animal biomass in terrestrial
ecosystems. Flowering plants, meanwhile, owe
their evolutionary success to an array of
interspecific interactions—such as pollination,
seed dispersal, and herbivory—that have helped
to shape their great diversity. The Ecology and
Evolution of Ant-Plant Interactions brings
together findings from the scientific literature on
the coevolution of ants and plants to provide a
better understanding of the unparalleled success
of these two remarkable groups, of interspecific

interactions in general, and ultimately of
terrestrial biological communities. The Ecology
and Evolution of Ant-Plant Interactions
synthesizes the dynamics of ant-plant
interactions, including the sources of variation in
their outcomes. Victor Rico-Gray and Paulo S.
Oliveira capture both the emerging appreciation
of the importance of these interactions within
ecosystems and the developing approaches that
place studies of these interactions into a broader
ecological and evolutionary context. The
collaboration of two internationally renowned
scientists, The Ecology and Evolution of Ant-
Plant Interactions will become a standard
reference for understanding the complex
interactions between these two taxa.

Five Albanian Villages - Antonio Laurìa 2020-12-27
This book is the result of a research project designed and carried out at the Department of Architecture, University of Florence. This research was based on the transfer of knowledge from members of the Albanian Diaspora in Italy (university students, young architects and researchers) to their home country. This unique process blazed a trail in the Albania-related studies by creating a methodology, which could be replicated not only in Albanian rural contexts, but also elsewhere. The book constitutes a structured tool for generating sustainable and socially inclusive territorial development processes in five lesser-known Albanian cultural sites. Their tangible and intangible cultural heritage was seen as a driving factor for triggering development processes aimed at improving the inhabitants' quality of life and strengthening local identity and social networks. Through concrete proposals and strategies, the book offers scenarios and solutions capable of enhancing the potential of each village and, at the same time, counteracting the effects of land abandonment that so often characterise them.

The Waning of the Renaissance, 1550-1640 - William James Bouwsma 2002-01-01
Historians have conventionally viewed intellectual and artistic achievement as a

seamless progression in a single direction, with the Renaissance, as identified by Jacob Burckhardt, as the root and foundation of modern culture. But in this brilliant new analysis William Bouwsma rethinks the accepted view, arguing that while the Renaissance had a beginning and, unquestionably, a climax, it also had an ending. Examining the careers of some of the greatest figures of the age--Montaigne, Galileo, Jonson, Descartes, Hooker, Shakespeare, and Cervantes among many others--Bouwsma perceives in their work a growing sense of doubt and anxiety about the modern world. He considers first those features of modern European culture generally associated with the traditional Renaissance, features which reached their climax in the late sixteenth and early seventeenth centuries. But even as the movements of the Renaissance gathered strength, simultaneous impulses operated in a contrary direction. Bouwsma identifies a growing concern with personal identity, shifts in the interests of major thinkers, a decline in confidence about the future, and a heightening of anxiety. Exploring the fluctuating and sometimes contradictory atmosphere in which Renaissance artists and thinkers operated, Bouwsma shows how the very liberation from old boundaries and modes of expression that characterized the Renaissance became itself increasingly stifling and destructive. By drawing attention to the waning of the Renaissance culture of freedom and creativity, Bouwsma offers a wholly new and intriguing interpretation of the place of the European Renaissance in modern culture.

Worm - Mark Bowden 2011-09-27
From the bestselling author of Black Hawk Down, the gripping story of the Conficker worm—the cyberattack that nearly toppled the world. The Conficker worm infected its first computer in November 2008, and within a month had infiltrated 1.5 million computers in 195 countries. Banks, telecommunications companies, and critical government networks—including British Parliament and the French and German military—became infected almost instantaneously. No one had ever seen anything like it. By January 2009, the worm lay hidden in at least eight million computers, and the botnet of linked computers it had created was big enough that an attack might crash the world. In this "masterpiece" (The Philadelphia Inquirer), Mark Bowden expertly lays out a spellbinding tale of how hackers, researchers, millionaire Internet entrepreneurs, and computer security experts found themselves drawn into a battle between those determined to exploit the Internet and those committed to protecting it.

Memories in Wireless Systems - Rino Micheloni 2008-07-24
For the technological progress in communication technology it is necessary that the advanced

studies in circuit and software design are accompanied with recent results of the technological research and physics in order to exceed its limitations. This book is a guide which treats many components used in mobile communications, and in particular focuses on non-volatile memories. It emerges following the conducting line of the non-volatile memory in the wireless system: On the one hand it develops the foundations of the interdisciplinary issues needed for design analysis and testing of the system. On the other hand it deals with many of the problems appearing when the systems are realized in industrial production. These cover the difficulties from the mobile system to the different types of non-volatile memories. The book explores memory cards, multichip technologies, and algorithms of the software management as well as error handling. It also presents techniques of assurance for the single components and a guide through the Datasheet lectures.

Post-Metropolitan Territories - Alessandro Balducci 2017-01-20
Processes of multi-scalar regional urbanization are occurring worldwide. Such processes are clearly distinguishable from those of the nineteenth and twentieth centuries due to the shifting concepts of both the city and the metropolis. International literature highlights how what we have historically associated with the idea of cities has long been subjected to consistent reconfiguration, which involves stressing some of the typical features of the idea of "cityness". Post-Metropolitan Territories: Looking for a New Urbanity is the product of a research project funded by the Italian Ministry for Education, Universities and Research (MIUR). It constitutes a thorough overview of a country that is one of Europe's most diverse in terms of regional development and performance: Italy. This book brings together case studies of a number of Italian cities and their hinterlands and looks at new forms of urbanization,

exploring themes of sustainability, industrialization, de-industrialization, governance, city planning and quality of life. This volume will be of great interest to academics and students who study regional development, economic geography and urban studies, as well as civil servants and policymakers in the field of spatial planning, urban policy, territorial policies and governance.
