Transforming the Workforce for Children Birth Through Age 8 - National Research Council 2015-07-23

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well.

Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children.

This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for

Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Effective Reading Skills - Afriana, S.S., M.Pd.;
Drs. Zakrimal, M.SI. 2022-01-28

This module is divided into 12 chapters, with each chapter having three subdivisions: pre-reading activities, whilst reading activities, and post-reading activities. The pre-reading activities include a vocabulary preview, the most significant determiner in reading comprehension. Following this well-designed pre-reading section is the reading passage and numerous post-reading activities. The post-reading activities focus on recognizing paragraph structure, main ideas, topic sentences, and vocabulary development. Strategies for reading, such as using punctuation clues to decode meaning and recognizing author intent, are also included in some of the chapters. Many of the chapters also

include an activity aimed at improving learner vocabulary skills as a post-reading activity, and all include a class discussion activity, allowing students to integrate oral skills with the reading objective. The reading passages in each chapter cover a variety of themes—such as education, nature, weather, directions, cultures, laws, eating habits, health, media, holidays, and science. Additionally, teachers will find the treatment of cultural diversity within many reading selections especially accommodating to classroom populations with multi-ethnic backgrounds.

Science | Environment | Health - Albert Zeyer
2012-05-24

Health and the environment are important learning areas in science education and their significance is growing. Not only do they have high social relevance, but they are also close to students' interests and needs. They provide many opportunities to unlock science with questions that are personally relevant to boys and girls and that inspire them to engage in science. This book contains a selection of papers from prominent professionals in science, health and environmental education, who reflect on science education, each from their specific point of view. The core idea is to present well-founded perspectives on how science education may benefit from challenges stemming from both

health and environmental education. Specific reasons are discussed as to why these two areas are particularly legitimized to challenge science education, and their potential impact on a revision of science education is evaluated. A new pedagogy for science|environment|health that yields interesting and relevant science education

for students and teachers, and addresses the grand challenges of this century: what an attractive and rewarding project! The book will motivate teachers, teacher educators and science education researchers to take part in this on-going project.
