The War That Doesn't Say Its Name - Jason K. Stearns 2022-02

"The Congolese conflict has been dubbed a "forever war," a conflict that defies resolution. As of 2016, the Congo was experiencing its twentieth year of violent conflict, one of worst humanitarian calamities of our time and climbing the all-time charts. According to one study, 5.4 million people have died between 1998 and 2007 alone, largely from disease, though fighting and violence is ongoing to this day. This study aims to explain the most recent phases of the conflict, why it has lasted for so long, where diplomats and peacemakers have gone wrong in their approach to solving the violence, and how the Congo can help us understand contemporary armed conflict more broadly. Using the Congolese conflict as an illustrative case study, the author argues that three factors determine why conflicts there have persisted in some places while dwindling elsewhere: the cohesion, political culture, and constituencies of the belligerents. He finds that the more fragmented the belligerents, the more protracted the conflict becomes, and as they shift to see the conflict as an end in itself and to perceive violence as an acceptable and necessary tool of politics, the longer the conflict lasts. Finally, he develops a theory for how social constituencies shape negotiations between belligerents and the government by providing guarantees, brokering contacts, and presenting commitment problems"--

World Civilizations - Peter N. Stearns 2011

World Civilizations, AP® Edition encourages students to grasp concepts and patterns across a huge breadth of time and space and helps to facilitate global understandings and connections in the classroom. This text captures a truly global approach by discussing and comparing major societies and focusing on their interactions. World Civilizations, AP® Edition presents a clear factual framework while stimulating analysis about global contacts, regional patterns, and the whole process of change and continuity on a world stage. This text identifies six periods in world history. Each period is determined by three basic criteria: a geographical rebalancing among major civilizational areas, an increase in the intensity and extent of contact across civilizations (or, in the case of the earliest period, crossregional contact), and the emergence of new and roughly parallel developments in many major civilizations. Based on "comparative work and focuses on global processes," this text helps students see the history of the world as one based on multiple disciplines. - Publisher.

**World Civilizations** - Peter N. Stearns 2007

With 83 additional outline and four-color maps, World Civilizations: The Global Experience, Fifth Edition, Atlas Edition, helps students with geography, one of the most difficult aspects of World history courses for many. The maps are accompanied by review questions that call on students to identify important geographical areas and think critically about the connection between geography and historical events. The maps are on perforated pages and are organized by chapter so that they can be assigned easily and collected. The primary goal of World Civilizations is to present a truly global history—since the development of agriculture and herding to the present. Using a unique periodization, this book divides the main periods of human history according to changes in the nature and extent of global contacts. This global world history text emphasizes the major stages in the interactions among different peoples and societies, while also assessing the development of major societies. Presenting social and cultural as well as political and economic aspects, the book examines key civilizations in world history. *Reinforcement Learning, second edition* - Richard S. Sutton 2018-11-13  
The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

### **Spinning World History** - Eric Burnett 2017-05-13

Do you know how we got to here? In "Spinning World History," Eric Burnett takes you through all the major tales, traditions and turning points of world history - not just European history, but WORLD history. You'll figure out real quick that the West might have had some crowning moments, but for the whole of human history, it's been the Persians, the Indians, the Chinese, the Muslims or some horse peoples from the steppe that have truly turned us into the clever little creatures we are today. And when most world history books fade off once the Cold War comes to a close, this sometimes cheekily-written tome just gets going. Updated to include contemporary debates over topics such as Brexit, the rise of ISIS, claims to the South China Sea, the mounting refugee crisis and the controversial presidency of Donald Trump, this second edition finishes with a distinctively comprehensive look at the 21st century challenges facing the nine major regions of today's world - Africa, Latin America, Japan, China, the Middle East, India, Russia, Europe and the United States.

### **Why the North Won the Vietnam War** - M. Gilbert 2002-05-30

In this new collection of essays on the Vietnam War, eminent scholars of the Second Indo-china conflict consider several key factors that led to the defeat of the United States and its allies. The book adopts a candid and critical look at the United State's stance and policies in Vietnam, and refuses to condemn, excuse, or apologize for America's actions in the conflict. Rather, the contributors think widely and creatively about the varied reasons that may have accounted for the United State's failure to defeat the North Vietnamese Army, such as the role played by economics in America's defeat. Other fresh perspectives on the topic include American intelligence failure in Vietnam, the international dimensions of America's defeat in Vietnam, and the foreign policy of the Democratic Republic of Vietnam. None of the essays have been previously published, and all have been specifically commissioned for the book by its editor, Marc Jason Gilbert.

**Dominance by Design** - Michael Adas 2009

Long before the United States became a major force in global affairs, Americans believed in their superiority over others due to their inventiveness, productivity, and economic and social well-being. U.S. expansionists assumed a mandate to civilize non-Western peoples by demanding submission to American technological prowess and design. As an integral part of America's national identity and sense of itself in the world, this civilizing mission provided the rationale to displace the Indians from much of our continent, to build an island empire in the Pacific and Caribbean, and to promote unilateral--at times military--interventionism throughout Asia. In our age of smart bombs and mobile warfare, technological aptitude remains preeminent in validating America's global mission. Michael Adas brilliantly pursues the history of this mission through America's foreign relations over nearly four

centuries from North America to the Philippines, Vietnam, and the Persian Gulf. The belief that it is our right and destiny to remake foreign societies in our image has endured from the early decades of colonization to our current crusade to implant American-style democracy in the Muslim Middle East. *Dominance by Design* explores the critical ways in which technological superiority has undergirded the U.S.'s policies of unilateralism, preemption, and interventionism in foreign affairs and raised us from an impoverished frontier nation to a global power. Challenging the long-held assumptions and imperatives that sustain the civilizing mission, Adas gives us an essential guide to America's past and present role in the world as well as cautionary lessons for the future.
