"The reading problems addressed in the book move beyond those associated with disabilities such as dyslexia or high-functioning autism. The author addresses experientially based reading difficulties caused by inadequate instruction or limited exposure to academic language/literacy. Unlike other books on response to intervention (RTI), this book presents an argument for using RTI as a method of identification as well as intervention in combination with individual students' reading profiles. The case studies and practical examples cover a broad range of reading problems (not only learning disabilities) to help make research findings applicable to a multidisciplinary audience, especially practitioners"--

**Day-to-Day Assessment in the Reading Workshop** - Franki Sibberson 2008

How to set reading goals for you students, assess your students to ensure they're meeting those goals, and carry out instruction based on your findings.

*Assessing Reading* - 2008

This book contains a collection of formal and informal reading assessments for use with students in Grades k-12. These assessments assist the teacher in targeting areas of strength

and weakness, in monitoring student reading development, and in planning appropriate instruction. Unlike large-scale achievement tests, the majority of these assessments can be administered individually. Each assessment was selected because it measures an important research-based reading skill and because it is quick, reliable, and easy to use. Each assessment provides clear and accurate individual student information. The assessments included in this book are informal assessments designed to measure specific skills critical to successful reading. Some of the assessments are curriculum-based, while others are criteria-based, depending on the purpose of the assessment. Similarly, some assessments target specific skills, some are instruments for broader screening, and some can be used for both types of assessment. Spanish assessments are provided for the early grades where many students may still be in bilingual programs or may be receiving Spanish primary language instruction before transitioning to English programs. Profile Forms and Class Records found in the Appendix provide an easy way for teachers to summarize assessment results. Appended are: (1) core Reading Assessment Profile Forms; (2) core Reading Assessment Class Records; (3) Performance Criteria for Fluency and Fluency Scores: a Discussion; (4) Assessment-Driven Instruction: a Systems Approach; and (5) Resources for Assessing Reading. [Contributing authors include: Orna Lenchner, Michael Milone, and Jacalyn Mahler.].

Knowing What Students Know - National Research Council 2001-10-27

Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning

greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments—assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. *Knowing What Students Know* essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment—what students know and how well they know it—as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, *Knowing What Students Know* will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

Classroom Assessment and the National Science Education Standards - National Research Council 2001-08-12

The National Science Education Standards address not only what students should learn about science but also how their learning should be assessed. How do we know what they know? This accompanying volume to the Standards focuses on a key kind of assessment: the evaluation that occurs regularly in the classroom, by the teacher and his or her students as interacting participants. As students conduct experiments, for example, the teacher circulates around the room and asks individuals about their findings, using the feedback to adjust lessons plans and take other actions to boost learning. Focusing on the teacher as the primary player in assessment, the book offers assessment guidelines and explores how they can be adapted to the individual classroom. It features examples, definitions, illustrative vignettes, and practical suggestions to help teachers obtain the greatest benefit from this daily evaluation and tailoring process. The volume discusses how classroom assessment differs from conventional testing and grading-and how it fits into the larger, comprehensive assessment system.

Developing Assessments for the Next Generation  
Science Standards - National Research Council  
2014-05-29

Assessments, understood as tools for tracking  
what and how well students have learned, play a  
critical role in the classroom. Developing  
Assessments for the Next Generation Science  
Standards develops an approach to science  
assessment to meet the vision of science  
education for the future as it has been  
elaborated in A Framework for K-12 Science  
Education (Framework) and Next Generation  
Science Standards (NGSS). These documents  
are brand new and the changes they call for are  
barely under way, but the new assessments will  
be needed as soon as states and districts begin  
the process of implementing the NGSS and  
changing their approach to science education.  
The new Framework and the NGSS are designed

to guide educators in significantly altering the way K-12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think, and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions - the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines, and the core ideas of the disciplines - and argues that they should be interwoven in every aspect of science education, building in sophistication as students progress through grades K-12.

Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment, in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale, and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students.

Math That Matters - Marian Small 2019-05-17

In this insightful math resource for grades 3–8, popular professional developer Marian Small helps teachers understand and facilitate meaningful assessments to advance student understandings. Small shows new and veteran teachers how to do three fundamental things well: identify the most important math to assess; construct meaningful assessments—both formative and summative—to measure student understanding; and provide students with feedback that is clear, timely, and specific. Examples for each grade level are provided, along with details on how to pose questions, analyze errors, and help students understand and learn from their mistakes. The book provides specific guidance for when and how to offer feedback on both correct and incorrect answers in order to advance students' mathematical thinking. Like other Marian Small bestsellers, Math That Matters combines her special brand of lucid explanation of difficult concepts with fresh and engaging activities. ### **THE EARLY GRADE READING ASSESSMENT** - Amber K. Gove 2011-09-28

The Early Grade Reading Assessment (EGRA) measures students' progress towards reading. EGRA gauges early literacy skills through a 15-minute individual oral assessment of five fundamental reading skills. RTI worked with education experts to develop the EGRA in 2006, and it has been piloted and implemented in more than 40 countries. This volume aims to take stock of the substantial amount of information and experience generated through the use of EGRA, and to share this knowledge with

practitioners, policymakers, and international donors. Chapters cover not only particular applications of the instrument but also put EGRA in the context of broader issues and developments in literacy and education.

### *Testing, Teaching, and Learning* - National Research Council 1999-10-06

State education departments and school districts face an important challenge in implementing a new law that requires disadvantaged students to be held to the same standards as other students. The new requirements come from provisions of the 1994 reauthorization of Title I, the largest federal effort in precollegiate education, which provides aid to "level the field" for disadvantaged students. *Testing, Teaching, and Learning* is written to help states and school districts comply with the new law, offering guidance for designing and implementing assessment and accountability systems. This book examines standards-based education reform and reviews the research on student assessment, focusing on the needs of disadvantaged students covered by Title I. With examples of states and districts that have track records in new systems, the committee develops a practical "decision framework" for education officials. The book explores how best to design assessment and accountability systems that support high levels of student learning and to work toward continuous improvement. *Testing, Teaching, and Learning* will be an important tool for all involved in educating disadvantaged students - state and local administrators and classroom teachers.
