Agribusiness: Principles of Management - David Van Fleet
2013-05-15

Intended for all segments of agribusiness as well as non-agribusiness organizations, AGRIBUSINESS:PRINCIPLES OF MANAGEMENT presents the changing face of

agribusiness in a format that is interesting, straightforward, and easy to understand. This comprehensive book approaches agribusiness as a technology-oriented industry composed of organizations ranging in size from small, family-owned farms or

businesses to some of the largest corporations in the world. With multiple opportunities for self-review as well as vignettes, cases, and examples in each chapter, this book shows readers the real-world application of what they are learning and provides them with a solid understanding of what management is all about. New Directions for Smallholder Agriculture - Peter B. R. Hazell 2014

Arising from an International Fund for Agricultural Development (IFAD) project this book explores the most promising innovations in technology, institutional, and policy approaches for creating additional and better farm business opportunities for smallholder farmers.

Agribusiness and Innovation Systems in Africa - Kurt Larsen 2009

This book examines how agricultural innovation arises

in four African countries ? Ghana, Kenya, Tanzania, and Uganda ? through the lens of agribusiness, public policies, and specific value chains for food staples, high value products, and livestock.

A Concept of Agribusiness -

John H. Davis 2021-01-29

Reprint of the 1957 Edition.

Full facsimile of the original edition and not reproduced with Optical Recognition Software. Agribusiness is the business of agricultural production which involves the production, protection, sales, and marketing of the product to satisfy the customers need. The term is a portmanteau of agriculture and business and was coined in 1957 by John Davis and Ray Goldberg. It includes agrichemicals, breeding, crop production (farming or contract farming), distribution, farm machinery, processing, and seed supply, as well as marketing and retail sales. All agents of the food and fiber value chain and those institutions that influence it are part of the agribusiness system. In their book A

Concept of Agribusiness, Goldberg and Davis provided a rigorous economic framework for the field. They traced a complex value-added chain that begins with the farmer's purchase of seed and livestock and ends with a product fit for the consumer's table. It may rightfully be considered one of the foundation studies on the subject. Scarce in the original.

Agribusiness Management -

Freddie L. Barnard 2012

Agribusiness Management uses four specific approaches to help readers develop and enhance their capabilities as agribusiness managers. First, this edition of the book offers a contemporary focus that reflects the issues that agribusiness managers face both today and are likely to face tomorrow. Specifically, food sector firms and larger agribusiness firms receive more attention in this edition, reflecting their increasing importance as employers of food and agribusiness program graduates. Second, the book presents conceptual material in a pragmatic way with

illustrations and examples that will help the reader understand how a specific concept works in practice. Third, the book has a decision-making emphasis, providing contemporary tools that readers will find useful when making decisions in the contemporary business environment. Finally, Agribusiness Management offers a pertinent set of discussion questions and case studies that will allow the reader to apply the material covered in real-world situations.

Agricultural Economics -

Ifeoluwapo Amao 2021-12-15

This book discusses pertinent aspects of agricultural economics and rural development. It includes case studies that assess the impact of tomato cultivation on food security and poverty alleviation of rural dwellers and

agricultural producers. Additionally, it examines farmers' knowledge of organic livestock farming, a novel method of livestock production. The book also contains a review of factors affecting the efficiency of vegetable production and the basics of good agribusiness plans for successful agribusiness activities.

*Enabling Environments for
Agribusiness and Agro-
industries Development* - Gabor
Konig 2013

The existence of a conducive business climate, or enabling environment, is considered essential to engender economic growth and development. However, what "an enabling environment" should encompass in practical terms remains elusive to many

scholars and policy makers, particularly when discussed at the sub-sector level. This publication examines issues associated with enabling environments with a focus on agribusiness and agro-industrial sectors, which have not had their peculiar characteristics sufficiently examined in traditional appraisals of business climates. Based on a series of workshops and consultations organized in Africa, Asia, Eastern Europe and Latin America, the report reviews existing frameworks for general enabling environment assessments and discusses their relevance to agribusiness and agro-industries. It also discusses the challenges of enabling environment reforms and identifies a number of essential, important and useful enablers that are particularly relevant to agrifood business climate appraisals and upgrading.

Advances in Manufacturing, Production Management and Process Control - Beata Mrugalska 2020-06-30

This book discusses the latest advances in the broadly defined field of advanced manufacturing and process control. It reports on cutting-edge strategies for sustainable production and product life cycle management, and on a variety of people-centered issues in the design, operation and management of manufacturing systems and processes. Further, it presents digital modeling systems and additive manufacturing technologies, including advanced applications for different purposes, and discusses in detail the implementation of and challenges imposed by 3D printing technologies. Based on three AHFE 2020 Conferences (the AHFE 2020 Virtual

Conference on Human Aspects of Advanced Manufacturing, the AHFE 2020 Virtual Conference on Advanced Production Management and Process Control and the AHFE 2020 Virtual Conference on Additive Manufacturing, Modeling Systems and 3D Prototyping, the book merges ergonomics research, design applications, and up-to-date analyses of various engineering processes. It brings together experimental studies, theoretical methods and best practices, highlights future trends and suggests directions for further technological developments and the improved integration of technologies and humans in the manufacturing industry.

The impact of disasters and crises on agriculture and food security: 2021 - Food and Agriculture Organization of the United Nations

2021-03-17

On top of a decade of exacerbated disaster loss, exceptional global heat, retreating ice and rising sea levels, humanity and our food security face a range of new and unprecedented hazards, such as megafires, extreme weather events, desert locust swarms of magnitudes previously unseen, and the COVID-19 pandemic. Agriculture underpins the livelihoods of over 2.5 billion people – most of them in low-income developing countries – and remains a key driver of development. At no other point in history has agriculture been faced with such an array of familiar and unfamiliar risks, interacting in a hyperconnected world and a precipitously changing landscape. And agriculture continues to absorb a disproportionate share of the damage and loss wrought by disasters. Their growing frequency and intensity, along with the systemic nature of risk, are upending people's lives, devastating livelihoods,

and jeopardizing our entire food system. This report makes a powerful case for investing in resilience and disaster risk reduction – especially data gathering and analysis for evidence informed action – to ensure agriculture's crucial role in achieving the future we want.

Paradoxes in Food Chains and Networks - J.H.

Trienekens 2002-06-01

This publication contains the proceedings of the 5th international conference on chain and network management in agribusiness and the food industry. Papers will focus on the paradoxes caused by conflicting interests in the fields of economics and ethics, technology and environment, legislation and internationalisation, etc. The modern consumer demands highquality products, in broad assortments throughout the year, and for competitive prices. Society imposes constraints on companies in order to economize on the use of resources, ensure animal-friendly and safe production,

and restrict pollution. Together with technological developments and increased international competition, these demands have changed the production, trade, and distribution of food products beyond recognition. Demand is no longer confined to local or regional supply. The food industry is now swiftly becoming an interconnected system with a large variety of complex relationships. This is changing the way food is brought to the market. Currently, even fresh produce shipped from halfway around the world can be offered at competitive prices. These developments are accompanied by national and international regulations and legislation in the area of food quality and safety. In response to these changes, business strategies must now focus not only on traditional economical and technological interests, but also on topical issues such as the safety and healthfulness of food products, animal friendliness, the environment, etc. To effectively address

paradoxical demands facing businesses, many problems and opportunities must be approached from a multi-disciplinary perspective, and trade-offs must be made between different aspects of production, trade and the distribution of food.

A Framework for Assessing Effects of the Food System - National Research Council 2015-06-17

How we produce and consume food has a bigger impact on Americans' well-being than any other human activity. The food industry is the largest sector of our economy; food touches everything from our health to the environment, climate change, economic inequality, and the federal budget. From the earliest developments of agriculture, a major goal has been to attain sufficient foods

that provide the energy and the nutrients needed for a healthy, active life. Over time, food production, processing, marketing, and consumption have evolved and become highly complex. The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social, economic, ecological, and evolutionary factors. Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address. A Framework for Assessing Effects of the Food System develops an analytical framework for assessing effects associated with the ways in which food is grown, processed, distributed, marketed, retailed, and consumed in the United States. The framework will allow users to recognize effects across the full food system, consider all domains and dimensions of effects, account for systems dynamics and complexities,

and choose appropriate methods for analysis. This report provides example applications of the framework based on complex questions that are currently under debate: consumption of a healthy and safe diet, food security, animal welfare, and preserving the environment and its resources. A Framework for Assessing Effects of the Food System describes the U.S. food system and provides a brief history of its evolution into the current system. This report identifies some of the real and potential implications of the current system in terms of its health, environmental, and socioeconomic effects along with a sense for the complexities of the system, potential metrics, and some of the data needs that are required to assess the effects. The overview of the food system and the framework described in this report will be an essential resource for decision makers, researchers, and others to examine the possible impacts of alternative

policies or agricultural or food processing practices.

Surviving Supply Chain

Integration - National Research Council 2000-03-23

The managed flow of goods and information from raw material to final sale also known as a "supply chain" affects everything--from the U.S. gross domestic product to where you can buy your jeans. The nature of a company's supply chain has a significant effect on its success or failure--as in the success of Dell Computer's make-to-order system and the failure of General Motor's vertical integration during the 1998 United Auto Workers strike. Supply Chain Integration looks at this crucial component of business at a time when product design, manufacture, and delivery are changing radically and globally. This book explores the benefits of continuously improving the relationship between the firm, its suppliers, and its customers to ensure the highest added value. This book identifies the state-of-the-art developments that contribute to the success of vertical tiers of suppliers and relates these

developments to the capabilities that small and medium-sized manufacturers must have to be viable participants in this system. Strategies for attaining these capabilities through manufacturing extension centers and other technical assistance providers at the national, state, and local level are suggested. This book identifies action steps for small and medium-sized manufacturers--the "seed corn" of business start-up and development--to improve supply chain management. The book examines supply chain models from consultant firms, universities, manufacturers, and associations. Topics include the roles of suppliers and other supply chain participants, the rise of outsourcing, the importance of information management, the natural tension between buyer and seller, sources of assistance to small and medium-sized firms, and a host of other issues. Supply Chain Integration will be of interest to industry policymakers,

economists, researchers, business leaders, and forward-thinking executives.

Managing Risk in Farming - David Kahan 2013

This guide is intended to help extension workers better understand the concept of risk, the situation where risk occurs and management strategies that can be used to reduce, or at least soften, its effect. It is hoped that the guide will be useful in assisting extension workers to provide farmers with advice on the kind of risk management strategies that they can employ to deal with risk in their day-to-day operations. In this way extension workers can help farmers recognize and understand the risks that they are likely to face and assist them in making better farm management decisions that reduce the negative effect of the risks encountered in farming.

Agribusiness for Africa's Prosperity - United Nations 2012-02

In recent years, a renewed focus on agriculture has been evident in policy and development agendas for the African continent, yet little knowledge has been generated on the interlinkages of production, agroindustry and markets, as well as the potentials and challenges for developing these. This publication analyzes the challenges, the potential and opportunities of African agribusiness in the current period of dramatic changes in global agro-industrial markets, and builds a case for agribusiness development as a path to Africa's prosperity. Written by international experts, from agribusiness practitioners, to academic experts and UN technical agencies, this volume fills what the United Nations Industrial Development Organization perceived as a significant gap in knowledge concerning these issues.

Socio-Tech Innovation - Latha

Poonamallee 2020-04-25

This book defines socio-technological innovation and lays out different aspects of technology innovation and adoption literature as applied to socio-tech innovation and entrepreneurship. Socio-tech innovation refers to novel solutions that involve development or adoption of technological innovations to address social and/or environmental problems with a view towards creating benefit for the larger whole rather than just for the owners or investors. Unlike conventional technological innovation, socio-tech innovation either develops a product specifically for underserved markets and adopts a model in which the market is not an afterthought but the *raison d'être*. Social ventures have not been as successful in scaling up, though technology innovation-led ventures have; therefore, meaningful actionable insights that can help social ventures scale up successfully can be gleaned by this process. This book offers researchers in

innovation and entrepreneurship programs a unique and interdisciplinary approach to studying social innovation that is grounded in technology innovation. This book features a series of socio-tech venture cases that illustrate these dynamics and can be used in undergraduate and graduate courses.

The Role of the Farm Management Specialist in Extension - David Kahan 2013

The materials covered in this collection have been prepared for use by all service providers concerned with promoting farming as a business - whether they work for the private, NGO, or public sector. This could include the public sector extension workers who are involved in farm business management and marketing, private sector business service providers, NGOs and policymakers. Further, it is hoped that the material will encourage decisions-makers in countries where farm management extension positions have not been established to set up such

positions.

The State of the World's Land and Water Resources for Food and Agriculture - Food and

Agriculture Organization of the United Nations 2013-06-17

The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy

formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

Introduction to Agribusiness - Cliff Ricketts 2001

An introduction to the world of agribusiness. This book details the fundamentals and applications of agribusiness and shows how products go from their source to the consumer, highlighting the steps in this process. It also explains how to start-up, run and manage an agribusiness.

Sustainable Soil Management - Deirdre Rooney 2013-03-22

Changing land-use practices and the role of soil biological diversity has been a major focus of soil science research over the past couple of decades—a trend that is likely to continue. The information presented in this book points to a holistic approach to soil management. The first part looks at the land use effects on soil carbon storage, and considers a range of factors including carbon sequestration in soils. The second part of the book presents research investigating the interactions between soil properties, plant species, and the soil biota.

Collaboration in Government -

David E. McNabb 2021-11-30

This book comprehensively explores the many different forms of collaboration in government, both formal and informal, including strategic alliances, intergovernmental networks, and public-private partnerships. Contemporary US governmental and public organizations are changing to better cope after several decades of pressures to downsize, as well as to deliver new services with declining resources and, in many cases, decaying infrastructure. To meet these challenges, public managers are developing new networks, partnerships, collaborations, alliances and coalitions to deliver government services.

Collaboration in Government is designed to help public organizations parse the new and emerging forms of public partnerships and to develop the skills needed to manage them. Each chapter offers examples of how each type has been used in real public organizations, providing the

reader with an understanding of how these partnerships may be applied in a variety of contexts, as well as lessons that may be gleaned from the successes (and failures) of these collaborative models.

This book will be of interest to public servants who collaborate in their daily work, as well as students of public administration and public policy.
