Kitchen & Bath Sustainable Design provides a handbook to designing these rooms for sustainability, without sacrificing comfort or livability. With comprehensive guidance on approaching these rooms sustainably, readers will: Communicate better with builders, clients, and potential clients Understand technical

considerations, and the criteria that make a design "green" Conduct a full design analysis, including life cycle costing and efficiency Learn the ratings systems and standards in play in the green kitchen and bath The biggest elements of sustainable interior design—energy efficiency, water use, and materials selection—are all major players in the kitchen and bath. Clients are increasingly demanding attention to sustainability issues, and designers must be up to date on the latest guidelines, best practices, and technology. ### **Human Dimension and Interior Space -**

Julius Panero 2014-01-21

The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior

space. Human Dimension and Interior Space is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on

human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have

devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With Human Dimension and Interior Space, these standards are now accessible to all designers of interior environments.

**Basics** - Isabella Skiba 2014-05

Students of architecture are confronted at the beginning of their studies with a wealth of different ways in which to visually present their designs. Expressing ideas in the form of drawings and models is usually required in the early stages of studying: "learning by doing" is the only way for students to quickly develop a repertoire for their design work. However, there are important issues to consider between the phases of devising the spatial concept and recreating it in a two- or three-dimensional drawing or physical model: How to construct a perspective freehand drawing? What plan drawings are necessary to present my design? What scale should my model be and what

materials should I use to construct it? Basics architectural presentation conveys possible ways to present architectural projects throughout the various project phases. In an informative and practical approach, the publication discusses the basics of architectural representation from freehand drawing, which is especially important in the design phase, to the plan drawing, model, and architecture photography.

Architectural Graphics - Frank Ching 2014-05-16 Architectural Graphics focuses on the techniques, methodologies, and graphic tools used in conveying architectural ideas. The book takes a look at equipment and materials, architectural drafting, and architectural drawing conventions. Discussions focus on drawing pencils, technical drawing pens, set squares/templates, circle templates/compasses, line weight/line types, drafting technique, drawing circular elements, floor plan, doors and windows in plan, stairs, wall indications, plan grids, and site boundaries. The manuscript

examines rendition of value and context and graphic symbols and lettering. Topics include tonal values, media and techniques, value/texture rendition, material rendition, shades and shadows, people, furniture, graphic representation symbols, and hand lettering. The text explores freehand drawing and architectural presentations, including freehand sketching, graphic diagramming, and sketching equipment. The publication is a valuable reference for architects interested in doing further studies in architectural graphics.

*Integrated Drawing Techniques* - Robert Philip Gordon  
2016-01-14

Since the appearance of simplified 3D sketching programs like SketchUp, architects and interior designers have been called on to use both

freehand and 3D CAD drawings, often at very earliest stages of design. Since we must often go back and forth between analytical plan views and 3D visual views, it's important that this be a seamless process, requiring little disruptive action or break in the workflow. Integrated Drawing Techniques closes the gap between creativity and geometry, teaching beginner architects and interior designers how to design their residential interiors using freehand sketching and computer-aided design simultaneously. **Architects' Data** - Ernst Neufert 1991-01-15  
This is an essential aid in the initial design and  
planning of a project. The relevant building type  
is located by a comprehensive index and cross  
reference system, a condensed commentary  
covers user requirements, planning criteria,  
basic dimensions and other considerations of  
function, siting aspect etc. A system of  
references based on an extensive bibliography  
supports the text. In every section plans,  
sections, site layouts, design details and graphs  
illustrated key aspects of a building type's  
design. Most illustrations are dimensioned or  
scaled - the metric system of measurement is  
used throughout, and the equivalent in  
feet/inches can easily be read either off a  
graphic scale on the page or from the built-in

conversion table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element

of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.
