The Cambridge History of Native American Literature: Volume 1 - Melanie Benson Taylor
2020-09-17

Native American literature has always been uniquely embattled. It is marked by divergent

opinions about what constitutes authenticity, sovereignty, and even literature. It announces a culture beset by paradox: simultaneously primordial and postmodern; oral and inscribed; outmoded and novel. Its texts are a site of

political struggle, shifting to meet external and internal expectations. This Cambridge History endeavors to capture and question the contested character of Indigenous texts and the way they are evaluated. It delineates significant periods of literary and cultural development in four sections: "Traces & Removals" (pre-1870s); "Assimilation and Modernity" (1879-1967); "Native American Renaissance" (post-1960s); and "Visions & Revisions" (21st century). These rubrics highlight how Native literatures have evolved alongside major transitions in federal policy toward the Indian, and via contact with broader cultural phenomena such, as the American Civil Rights movement. There is a balance between a history of canonical authors and traditions, introducing less-studied works and themes, and foregrounding critical discussions, approaches, and controversies.

Social and Cultural Anthropology: A Very Short Introduction - John Monaghan
2000-02-24

If you want to know what anthropology is, look at what anthropologists do. This Very Short Introduction to Social and Cultural Anthropology combines an accessible account of some of the disciplines guiding principles and methodology with abundant examples and illustrations of anthropologists at work. Peter Just and John Monaghan begin by discussing anthropologys most important contributions to modern thought: its investigation of culture as a distinctively human characteristic, its doctrine of cultural relativism, and its methodology of fieldwork and ethnography. They then examine specific ways in which social and cultural anthropology have advanced our understanding of human society and culture, drawing on examples from their own fieldwork. The book ends with an assessment of anthropologys present position, and a look forward to its likely future. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every

subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Introducing Intercultural Communication -

Shuang Liu 2010-11-09

Books on intercultural communication are rarely written with an intercultural readership in mind. In contrast, this multinational team of authors has put together an introduction to communicating across cultures that uses examples and case studies from around the world. The book further covers essential new topics, including international conflict, social networking, migration, and the effects technology and mass media play in the globalization of communication. Written to be accessible for international students too, this text situates communication theory in a truly global perspective. Each chapter brings to life

the links between theory and practice and between the global and the local, introducing key theories and their practical applications. Along the way, you will be supported with first-rate learning resources, including: • theory corners with concise, boxed-out digests of key theoretical concepts • case illustrations putting the main points of each chapter into context • learning objectives, discussion questions, key terms and further reading framing each chapter and stimulating further discussion • a companion website containing resources for instructors, including multiple choice questions, presentation slides, exercises and activities, and teaching notes. This book will not merely guide you to success in your studies, but will teach you to become a more critical consumer of information and understand the influence of your own culture on how you view yourself and others.

Featuring 47 contributions from a global range of top scholars in the field, the handbook is divided into two parts, the first of which expands on language revitalization issues of theory and practice while the second covers regional perspectives in an effort to globalize and decolonize the field. The collection examines critical issues in language revitalization, including: language rights, language and well-being, and language policy; language in educational institutions and in the home; new methodologies and venues for language learning; and the roles of documentation, literacies, and the internet. The volume also contains chapters on the kinds of language that are less often researched such as

the revitalization of music, of whistled languages and sign languages, and how languages change when they are being revitalized. The Routledge Handbook of Language Revitalization is the ideal resource for graduate students and researchers working in linguistic anthropology and language revitalization and endangerment.

The Road to Revolution - Theodore John Kaczynski 2008

Kinship And Gender - Linda S Stone
1997-03-20

This undergraduate textbook uses anthropological kinship as a framework for the cross-cultural study of gender. Connecting kinship with gender, Linda Stone focuses on human reproduction and the social and cultural implications of male and female reproductive roles. Her insightful narrative introduces new ways of approaching and understanding cross-cultural variations. Stone provides coverage of the field of kinship at the introductory level, but

she also explores the major issues and debates in the study of the interrelation of gender and culture. The book reviews studies of primate kinship, considers ideas about the evolution of human kinship, and looks at kinship and gender in relation to different modes of descent, as illustrated by seven in-depth ethnographic case studies. Stone examines marriage through case studies of marriage in ancient Rome and Himalayan polyandry and offers a history of Euro-American kinship and gender, as well as an examination of the repercussions of the new reproductive technologies on both kinship and gender.

What Is America? - Ronald Wright 2009-02-24
From the award-winning, #1 bestselling author of *A Short History of Progress* comes another surprising, frightening and essential book. The USA is now the world's lone superpower, whose deeds could make or break this century. For

better and worse, America has Americanized the world. How did a marginal frontier society, in a mere two centuries, become the de facto ruler of the world? Why do America's great achievements in democracy, prosperity and civil rights now seem threatened by forces within itself? Brimming with insight into history and human behaviour, and written in Wright's captivating style, *What Is America?* shows how this came to pass; how the United States, which regards itself as the most modern country on earth, is also deeply archaic, a stronghold not only of religious fundamentalism but of "modern" beliefs in limitless progress and a universal mission that have fallen under suspicion elsewhere in the west, a rethinking driven by two World Wars and the reckless looting of our planet. A fresh, passionate look at the past and future of the world's most powerful nation, *What Is America?* will reframe the debate about our neighbour and ourselves.

World Prehistory - Brian M. Fagan 2021-11-30

World Prehistory: The Basics tells the compelling story of human prehistory, from our African origins to the spectacular pre-industrial civilizations and cities of the more recent past. Written in a non-technical style by two archaeologists and experienced writers about the past, the story begins with human origins in Africa some 6 million years ago and the spread of our remote ancestors across the Old World. Then we return to Africa and describe the emergence of Homo sapiens (modern humans) over 300,000 years ago, then, much later, their permanent settlement of Europe, Eurasia, Asia, and the Americas. From hunters and foragers, we turn to the origins of farming and animal domestication in different parts of the world after about 11,000 years ago and show how these new economies changed human existence dramatically. Five chapters tell the stories of the great pre-industrial civilizations that emerged after 5000 years before present in the Old World and the Americas, their strengths, volatility, and

weaknesses. These chapters describe powerful rulers and their ideologies, also the lives of non-elites. The narratives chronicle the rise and fall of civilizations, and the devastating effects of long droughts on many of them. The closing chapter poses a question: Why is world prehistory important in the modern world? What does it tell us about ourselves? Providing a simple, but entertaining and stimulating, account of the prehistoric past from human origins to today from a global perspective, World Prehistory: The Basics is the ideal guide to the story of our early human past and its relevance to the modern world.

The Licit Life of Capitalism - Hannah Appel
2019-12-13

The Licit Life of Capitalism is both an account of a specific capitalist project—U.S. oil companies working off the shores of Equatorial

Guinea—and a sweeping theorization of more general forms and processes that facilitate diverse capitalist projects around the world. Hannah Appel draws on extensive fieldwork with managers and rig workers, lawyers and bureaucrats, the expat wives of American oil executives and the Equatoguinean women who work in their homes, to turn conventional critiques of capitalism on their head, arguing that market practices do not merely exacerbate inequality; they are made by it. People and places differentially valued by gender, race, and colonial histories are the terrain on which the rules of capitalist economy are built. Appel shows how the corporate form and the contract, offshore rigs and economic theory are the assemblages of liberalism and race, expertise and gender, technology and domesticity that enable the licit life of capitalism—practices that are legally sanctioned, widely replicated, and ordinary, at the same time as they are messy, contested, and, arguably, indefensible.

Semantic and Lexical Universals - Cliff

Goddard 1994-01-01

This set of papers represents a unique collection; it is the first attempt ever to empirically test a hypothetical set of semantic and lexical universals across a number of genetically and typologically diverse languages. In fact the word 'collection' is not fully appropriate in this case, since the papers report research undertaken specifically for the present volume, and shaped by the same guidelines. They constitute parallel and strictly comparable answers to the same set of questions, coordinated effort with a common aim, and a common methodology. The goal of identifying the universal human concepts found in all

languages, is of fundamental importance, both from a theoretical and a practical point of view, since these concepts provide the basis of the psychic unity of mankind, underlying the clearly visible diversity of human cultures. They also allow us to better understand that diversity itself, because they provide a common measure, without which no precise and meaningful comparisons are possible at all. A set of truly universal (or even near-universal) concepts can provide us with an invaluable tool for interpreting, and explaining all the culture-specific meanings encoded in the language-and-culture systems of the world. It can also provide us with a tool for explaining meanings across cultures in education, business, trade, international relations, and so on. The book contains 13 chapters on individual languages

including Japanese (by Masayuki Onishi), Chinese (by Hilary Chappel), Thai (by Anthony Diller), Ewe (Africa, by Felix Ameka), Miskitu languages of South America (by Kenneth Hall), Australian Aboriginal languages Aranda, Yankunytjatjara and Kayardild (by Jean Harkins & David Wilkins, Cliff Goddard, and Nicholas Evans), the Austronesian languages Samoan, Longgu, Acehnese and Mangap-Mbula (by Ulrike Mosel, Deborah Hill, Mark Durie and Robert Bugenhagen), the Papuan language Kalam (by Andrew Pawley), and, last but not least French (by Bert Peters). In addition to the chapters on individual languages the book includes three theoretical chapters; Semantic theory and semantic universals (by Goddard), Introducing lexical primitives (by Goddard and Wierzbicka), and Semantic primitives across languages: a critical review (by Wierzbicka).
